Fontana, CA 92335

RBF ONTARIO
SEP 23 2009
RECEIVED

NOTICE OF PREPARATION AND PUBLIC SCOPING MEETING NOTICE

Date: September 15, 2009
Subject: Notice of Intent to Prepare Draft Environmental Impact Report
Project Title: Southwest Industrial Park (SWIP) Specific Plan Update and Annexation
Proponent/ Lead
Agency: City of Fontana, Development Services Organization – Planning Division
Address: City Hall, 8353 Sierra Avenue, Fontana, CA 92335
City Contacts: Dina Lomeli, Planning Technician
Craig L. Bruorton, AICP, Principal Planner
Cecilia Lopez-Henderson, Annexation Program Coordinator
Phone: SWIP Hotline: (909) 422-3408; Annexation Hotline: (909) 422-3405

The City of Fontana (City) has determined that an Environmental Impact Report (EIR) is necessary for the analysis of the proposed Southwest Industrial Park (SWIP) Specific Plan Update and Annexation (the "Project"). The Project proposes a comprehensive amendment to the original Specific Plan previously adopted in 1983 (and subsequently amended through 2008). In addition, the project proposes to annex an additional 472 acres (Almond Avenue Annexation Area as depicted on Exhibit 1). The total expansion will include an additional 1,318 acres from previous and proposed annexations, resulting in a total Project area of 3,110.7 acres. The City is the proponent and lead agency for the Project and will prepare the EIR under the terms and requirements of the California Environmental Quality Act (CEQA) and the implementing Guidelines of the California Environmental Quality Act ("Guidelines").

The purpose of this notice is: (1) to serve as the Notice of Preparation to the Office of Planning and Research (OPR), potential Responsible Agencies, federal agencies involved in funding or approving the Project, and Trustee Agencies responsible for natural resources affected by the Project, pursuant to Section 15082 of the CEQA Guidelines; and (2) to advise and solicit comments and suggestions regarding the preparation of the EIR, environmental issues to be addressed in the EIR, and any related issues, from interested parties other than those noted above, including interested or affected members of the public. The City requests that any potential Responsible or Trustee Agency responding to this notice respond in a manner consistent with CEQA Guidelines Section 15082(b).

In order for the concerns of your agency to be incorporated into the Draft EIR, we are requesting that you provide us with environmental information pertaining to the scope and content relevant to your agency's statutory responsibilities in connection with the proposed Project.

Your response at a minimum should include: a) significant environmental issues and reasonable alternatives and mitigation measures that the responsible or trustee agency will need to have explored in the Draft EIR; and b) whether or not your agency will be a responsible or trustee agency for the Project.

The Project description, location, and a discussion indicating the probable environmental effects of the proposed action are contained in the attached materials. Additional Project information may be obtained at the City Hall address shown above.

In an effort to provide agencies and the public additional time to provide comments, the City of Fontana is providing a 45 day public review period for this Notice of Preparation. **All comments must be received 45 days from receipt of this public notice.** All parties that have submitted their names and mailing addresses will be notified as part of the current Project's CEQA review process. If you wish to be placed on the mailing list or have any questions or need additional information, please contact the person identified above. The City will accept **written** comments from Agencies and interested parties regarding this notice through the close of business on **October 29, 2009** (submit written comments to the City address shown above).

PROJECT SUMMARY

The "Project" to be addressed in the EIR is located on approximately 3,110.7 acres in the southern portion of the City of Fontana. The Project site can be organized into four general areas:

- Northwest Area –** Located north of the I-10 Freeway and west of Cherry Avenue.
- Northeast Area –** Located north of the I-10 Freeway, west of Beech Avenue and north and south of Valley Boulevard.
- Central Area –** Located south of the I-10 Freeway, north of Jurupa Avenue, east of Mulberry Avenue, and west of Citrus Avenue.
- Southwest Area –** Located south of Jurupa Avenue, north of Philadelphia Avenue, east of Etiwanda Avenue, and west of Mulberry Avenue.

The Project proposes the expansion of the existing SWIP Specific Plan to encompass 3,110.7 acres. This expanded Project area would include an additional 1,318 acres of which 472 acres are currently located in unincorporated San Bernardino County and would require annexation into the City. As part of this Specific Plan update a new land use plan would be created, as well as modifications and revisions to allowable uses, design guidelines, and development standards that govern new development within this area.

Anticipated approvals for the Project include a General Plan Amendment, Prezone/Zone Change, Specific Plan Amendment, and EIR Certification. Subsequent to these actions, it is anticipated that the San Bernardino Local Agency Formation Commission (LAFCO) will take action regarding annexation of these properties.

PUBLIC SCOPING MEETING

To accommodate the schedules of both public agencies and residents, the City will be conducting two public scoping meetings, which will include a brief overview of the Project and a discussion of the anticipated environmental issues. Information for the date, time, and location for these meetings is provided below:

Meeting Date	Meeting Time	Meeting Location
Monday, October 5, 2009	2:00 pm – 3:00 pm	Fontana City Hall Development Services DAB Conference Room, 1 st Floor 8353 Sierra Avenue Fontana, CA 92335
Monday, October 5, 2009	6:30 pm – 8:00 pm	Kaiser High School Multipurpose Room 11155 Almond Avenue Fontana, CA 92337

Attendance at both of these meetings is not required, as the same information will be presented at both meetings. Any interested parties may attend either meeting to gain a better understanding of the Project and to identify environmental issues of concern.

SEPTEMBER 15, 2009

I. PROJECT LOCATION AND SETTING

The Southwest Industrial Park (SWIP) Specific Plan ("Project") is located within the City of Fontana, San Bernardino County, California (illustrated in the Regional Vicinity Map and Proposed Specific Plan Boundary in Exhibits 1 and 2). The City of Fontana is located in San Bernardino County bordered by the cities of Rancho Cucamonga and Ontario to the west, Rialto to the east, and Riverside County to the south.

The Project site is bordered by Mulberry Avenue and the Fontana Gateway Specific Plan area to the west, Citrus Avenue to the east, Jurupa Avenue to the south, and Interstate 10 to the north with two small portions just north of the freeway. The 3,110.7-acre Project site is generally level, with limited areas of very gentle slopes. The entire Project site has historically been used for farming until the 1940s when the Kaiser Steel Mill established and sparked the development of other industrial uses.

A portion (approximately 472 acres) in the northwest corner of the Project site is currently in unincorporated San Bernardino County and is referred to as the Almond Avenue Annexation Area. The annexation area is bordered by Interstate 10 on the north, Mulberry Avenue on the west, Almond Avenue on the east, and lies approximately 1,400 feet north of Jurupa Avenue. The City is proposing to annex this additional area into the City as well as SWIP as depicted in Exhibit 2.

II. BACKGROUND AND HISTORY

The City of Fontana has a long history of industrial development starting in 1942 with the end of agriculture and the establishment of the Kaiser Steel Mill. Since then, the industrial focus of the City has changed with the closure of Kaiser Steel and a gradual shift towards trucking and distribution-related industries began. The Southwest Industrial Park Specific Plan as approved by the City of Fontana in 1983 (and subsequently amended up until 2008), includes industrial uses within a strategic location between the I-10 and SR-60 freeways and approximately 1.5 miles east of the I-15 Freeway.

The Project consists of the proposed expansion of the existing SWIP Specific Plan to encompass approximately 3,110.7 acres. This expanded Project area would include an additional 1,318 acres of which 472 acres are currently located in unincorporated San Bernardino County and would require annexation into the City. The total expansion of SWIP will include acreage from previous and proposed annexations. The proposed Specific Plan will address issues associated with land use and design standards as well as underutilized parcels, non-conforming parcels, and recently annexed properties within the existing and proposed SWIP boundaries.

III. SWIP SPECIFIC PLAN PROJECT CHARACTERISTICS

Land Use Concept

Currently, the City has developed a land use concept (depicted in Exhibit 3), which identifies the land use districts for the proposed Project. Descriptions of these districts and intended uses include the following:

Speedway Industrial District (SID)

Building on its proximity to the Auto Club Speedway, this district is approximately 126.2 acres in size located directly north of the I-10 Freeway and west of Cherry Avenue. This district would provide opportunities for uses that complement the proximity to the Speedway facility and enhance this area as a gateway to the City through aesthetically pleasing design. This district will allow a mix of uses, including service commercial uses (including hotels), small businesses, research and development, flex tech, and logistics warehousing.

Freeway Industrial/Commercial District (FID)

This district is situated along the I-10 Freeway corridor, a crucial transportation corridor for this part of the City and the region. This district includes approximately 333.7 acres fronting both the north and south side of the freeway. The northern portion of approximately 45 acres is located north and south of Valley Boulevard and west of Beech Avenue, with the remaining 288.7 acres located south of the I-10 Freeway, north of Slover Avenue between Mulberry and Citrus Avenues. The Freeway Industrial/Commercial District is intended to better define Fontana's gateway along the I-10 Corridor and create a positive image of the City with heightened design and development standards, including enhanced landscapes, screening, setback, and fencing regulations. This district will encourage a mixture of commercial and light industrial uses that require high visibility and close proximity to freeways. The district will also encourage activities that combine industrial and commercial uses, such as businesses that require a mixture of warehouse, showroom, and office spaces.

Slover West Industrial District (SWD)

This district includes approximately 289.1 acres located east of Mulberry Avenue, west of Cherry Avenue, north of Santa Ana Avenue and south of Slover Avenue. This district would promote the continued use and expansion of existing industrial developments and logistics based warehousing and manufacturing facilities, along with strategically located service commercial uses.

Slover Central Manufacturing/Industrial District (SCD)

This district includes approximately 423.7 acres located east of Cherry Avenue, west of Beech Avenue, south of Slover Avenue and approximately 1400 feet north of Jurupa Avenue. The intent of this district is to create an industrial area that capitalizes on the existing and proposed infrastructure (existing rail spur, truck routes, and freeway interchanges) that can support manufacturing and industrial uses. This district will allow development of manufacturing and other high intensity industrial uses that can utilize the existing and proposed transportation infrastructure that will support this part of the City. In addition, this district will promote trucking related uses due to close proximity to freeway interchanges and railway facilities.

Slover East Industrial District (SED)

This district includes approximately 361.9 acres located east of Beech Avenue, west of Citrus Avenue, south of Slover Avenue and approximately 1400 feet north of Jurupa Avenue. Bordered by the SWIP Residential Trucking District to the east and Jurupa North Research and Development District to the south, this district is intended to promote the continued use and expansion of existing

industrial developments, logistics based warehousing and manufacturing uses, along with strategically located service commercial. The district will rely on its close proximity to truck routes and existing/proposed freeway interchanges to ensure access to developments proposed within this area of the Project.

Jurupa North Research and Development District (JND)

This district includes approximately 561 acres located north of Jurupa Avenue between Mulberry and Citrus Avenues. This district would encourage small business development by allowing a mixture of development types and uses including light industrial, warehousing, office development, flex tech (type of building designed to be versatile, which may be used in combination with office, research and development, or other types of development), research and development and service commercial uses. By focusing on a mixture of lower intensity uses, this district would act as a buffer between the adjacent Southridge Specific Plan residential development to the south, the existing and planned industrial uses to the north, and Kaiser High School by encouraging uses compatible with residential and school uses in this part of the Project area.

Residential Trucking District (RTD)

This district includes approximately 107.1 acres within four separate areas of the Project. The areas are generally described as follows: RTD-1 comprises approximately 8.3 acres and RTD-2 comprises approximately 30.2 acres and lie on the west side of the Project area; RTD-3 comprises approximately 17.7 acres and RTD-4 comprises approximately 51 acres and lie on the east side of the Project area. This district is intended to preserve four existing residential neighborhoods with trucking uses and provide additional opportunities for trucking uses within this part of the Specific Plan.

Jurupa South Industrial District (JSD)

This district is approximately 535.6 acres in size and includes all of the land located south of Jurupa Avenue, north of Philadelphia Avenue, east of Etiwanda Avenue, and west of Mulberry Avenue. This portion of the Project is considered to be largely built-out. The proposed land use district for this area is intended to maintain and promote the existing manufacturing and warehousing industrial uses and provide opportunities for intensification of these uses where applicable. This district's proximity to existing truck routes and the I-10, I-15, and SR-60 freeway, ensures that regional connectivity will be considered as part of the planning area.

Public Facilities (Kaiser High School) (PF)

In addition to the land use districts previously outlined, the SWIP Specific Plan will also include the existing Kaiser High School facility currently located at the northwest corner of Cherry and Jurupa Avenues. This district is approximately 37.7 acres in size.

SWIP Specific Plan Land Use Summary

Table 1 identifies the acreages of each district within the SWIP Specific Plan as well as the acreage of roadway right-of-way for the Project area as follows:

Table 1 – SWIP Specific Plan Land Use Summary

Land Use District	Acreage
Speedway Industrial	126.2
Freeway/Industrial Commercial	333.7
Slover West Industrial	289.1
Slover Central Manufacturing/Industrial	423.7
Slover East Industrial	361.9
Jurupa North Research and Development	561.0
Residential Trucking	107.1
Jurupa South Industrial	535.6
Public Facilities (Kaiser High School)	37.7
Right-of-Way	334.7
TOTAL	3,110.7

Circulation and Infrastructure

The EIR will address onsite roadways, onsite and offsite sewer, water and storm drain infrastructure facilities as follows:

Circulation

The Project area includes approximately 334.7 acres of existing public right-of-way for roadways located within the Specific Plan area. The circulation system within the Project area is designated in the Fontana General Plan as 8-lane Major Highways, Major Highways (6 lane), Primary Highways (4 lane), and Secondary Highways (4 lane), which are anticipated to be constructed as implementation of the Specific Plan occurs. At this time, some of the onsite roadways are not fully improved. Improvements to these roadways will be identified as a part of the Specific Plan and Environmental Impact Report.

Infrastructure

As part of the Specific Plan preparation, the City will be conducting an analysis of onsite and offsite sewer, water, and storm drain infrastructure that may be needed to support the Project. The Specific Plan will identify the existing facilities and the recommended improvements that will be necessary to support the proposed land uses as depicted on Exhibit 3.

Phasing

Market conditions typically dictate phasing for industrial projects. It is anticipated that this Project will have a buildout horizon of approximately 20 years based on the market conditions and the demand for the land uses being proposed.

Anticipated Approvals

Table 2 identifies the anticipated approvals that will occur as a result of the Project, as follows.

Table 2 - Anticipated Approvals

Project Approvals	Agency
Specific Plan Approvals: - General Plan Amendment - Prezone/Zone Change - Specific Plan Amendment	City of Fontana
Final EIR Certification	
Annexation	LAFCO

IV. POTENTIAL ENVIRONMENTAL EFFECTS OF THE PROJECT

Based upon review of available information, the City of Fontana has determined that the Project may have significant environmental effects and therefore has initiated preparation of a Program EIR. This EIR will address potentially significant Project-related impacts, based upon responses to the NOP, public and agency comments on the NOP, public scoping meeting comments, consultation with potentially affected agencies, results of various technical studies, and research conducted throughout the EIR process. The following discussions of potential environmental effects represent a preliminary summary of potential impacts. These environmental effects may be modified during the course of the EIR preparation.

Aesthetics, Light and Glare: The EIR will characterize the existing aesthetic environment and visual resources, including a discussion of views within the site and views from surrounding areas to the site, particularly from the adjacent uses. Project impacts will be addressed based on changing onsite and offsite aesthetics visible from surrounding roadways and viewpoints, particularly with respect to those districts that border residential areas and areas that front major thoroughfares. The contents of the EIR will incorporate discussion of architectural and design specifications for the Project, as identified in the Specific Plan, including City requirements for proposed landscaping. If necessary, mitigation measures will be recommended to reduce the significance of potential negative impacts.

The EIR will include discussion of impacts due to the introduction of light and glare associated with the development of the proposed Project. This analysis will include a light and glare impact discussion on neighboring sensitive uses from streetlights, vehicle headlights, building lights, etc., including consideration of "dark sky" issues. The analysis within the EIR will include review of and incorporation of existing City policies and guidelines regarding light and glare, and will include recommended mitigation measures to avoid, reduce or offset potential aesthetic and light and glare impacts.

Air Quality: This portion of this section will provide a discussion on the existing conditions and the current status of the California Clean Air Act and relevant air quality planning programs. Existing pollutant data will be obtained from the nearest monitoring station(s). This data will be summarized in a table indicating days exceeding State and Federal Standards for monitored pollutants. The various types of pollutants monitored at the station will also be described and sensitive receptors in the vicinity of the Project site will be identified.

The analysis within the EIR will provide discussion of potential Project impacts upon climate and air quality, addressing temporary construction emissions and long-term emissions from Project operations associated with daily vehicle travel and energy consumption. Short-term air quality impacts will be discussed focusing on dust generation, construction vehicle emissions, and possible odors. In addition, Project consistency will be evaluated based upon local and regional planning programs. Based on the Air Quality Management District (AQMD) and City criteria, the EIR will model construction-related dust and vehicle emissions and long-term operational emissions using Urban Emissions (URBEMIS) and Emission Factors (EMFAC) modeling. A Carbon Monoxide (CO) hotspot analysis will be provided, if warranted. The EIR will also provide estimated projection of annual greenhouse gas emissions resulting from development of the Project site, and will provide a qualitative discussion of the proposed Project's impacts relative to global warming and climate change. The EIR will recommend mitigation measures as appropriate to reduce construction and operational impacts to the extent feasible.

Biological Resources: The EIR will address potential impacts to biological resources, including mature trees, potential for sensitive habitats, and sensitive species. The EIR will include information from the City of Fontana General Plan as well as the technical documentation prepared for this Project. The EIR will recommend mitigation measures to reduce potentially significant impacts on these resources.

Cultural Resources: The EIR will address potential impacts with respect to historical, archaeological and paleontological resources. The EIR will also evaluate the potential for disturbance of human remains. The EIR will recommend mitigation measures to reduce potentially significant impacts on these resources.

Hazards and Hazardous Materials: The EIR will analyze the potential impacts from hazardous materials associated with historic uses of the Project site, such as contaminated soils, underground/above ground storage tanks and asbestos-containing materials, based on the Hazardous materials technical study prepared for the Project. The EIR will also evaluate the potential impacts resulting from development of the proposed Project with respect to the routine transport, use, or storage of hazardous substances, potential release of hazardous materials, and the potential for emissions of hazardous substances within ¼ mile of existing or proposed schools, as well as other sensitive land uses (i.e., Southridge Village and the Residential Trucking District). The EIR will also include evaluation of wildland fire risks, and the proposed Project's impacts on local emergency response plans within SWIP.

Land Use and Relevant Planning: The EIR will include evaluation of the proposed Project with respect to the City of Fontana General Plan and Zoning and Development Code, County of San Bernardino General Plan and Zoning Ordinance and related plans/policies. Due to the proposed General Plan Amendment, Prezone/Zone Change and annexation, the EIR will discuss the Project with respect to applicable regional planning documents. The EIR will include discussion of land use compatibility issues, as well as the Project's effects upon LAFCO policies. If required, mitigation measures will be recommended to minimize potentially significant impacts.

Noise: The EIR will include evaluation of potential noise impacts of the proposed Project, focusing on short-term construction noise (including truck hauling from site grading and construction), long-term changes in noise levels in the Project area due to traffic changes along area roadways, and changes in ambient noise levels associated with increased human activity. This section will specifically address impacts associated with the Project to noise-sensitive land

uses, both within the Project site and along existing offsite roads affected by the Project. The noise analysis will address potential increase in noise levels along the adjacent roadway portions, with particular attention to anticipated cumulative noise impacts. If required, mitigation measures will be recommended to minimize potentially significant impacts.

Population and Housing: The EIR will evaluate the proposed Project's impacts on population growth in the area due to proposed land use districts, as well as the potential for displacement of housing and/or people from the area.

Public Service and Utilities: The EIR will address the Project's potential impacts upon public services and utilities, with respect to the potential for new or modified facilities that may result in physical environmental impacts, particularly with respect to new or modified facilities on and off-site (such as emergency response times/facilities, water storage tanks, detention basins, and offsite utility infrastructure). The EIR will also address potential Project effects upon local services, such as schools, parks, library, and solid waste. This analysis will be based primarily upon feedback obtained from respective agencies as part of the NOP process, and incorporation of proposed infrastructure plans identified in the Specific Plan. If required, mitigation measures will be recommended to minimize potentially significant impacts.

Transportation and Circulation: The EIR will summarize the results of a Traffic Impact Analysis, which will address potential impacts to local roadways, intersections and state highways, as well as Congestion Management Plan requirements. Mitigation measures will be identified, where necessary to mitigate impacts associated with existing and cumulative conditions.

Additional Environmental Topics: The EIR will also address CEQA-mandated sections such as Cumulative Impacts, Growth-Inducing Impacts, Alternatives and other required sections.

V. ENVIRONMENTAL REVIEW PROCESS

Following completion of the 45-day Notice of Preparation public review period, the City of Fontana will incorporate relevant information into the Project EIR, including results of public scoping and technical studies. A Draft EIR will be circulated for public review and comment for the required 45-day public review period. All individuals that have requested notification will be placed on a Notice of Availability list for the Draft EIR, which will be available for review at the Fontana City Hall, 8353 Sierra Avenue, Fontana, CA 92335 and at the Lewis Library and Technology Center, 8437 Sierra Avenue, Fontana, CA, 92335. Following receipt of all written comments on the Draft EIR, the City will prepare Responses to Comments as part of the Final EIR.

Any written comments regarding this Notice of Preparation can be submitted to the City of Fontana-Planning Division, 8353 Sierra Avenue, Fontana, California, 92335 by **October 29, 2009**. Inquiries concerning the Notice of Preparation may be directed to Dina Lomeli, Planning Technician, at (909) 350-6578 or Craig L. Bruorton, AICP, Principal Planner, at (909) 350-7625. For questions regarding the annexation process, please contact Cecilia Lopez-Henderson, Annexation Program Coordinator, at (909) 350-6743.

Re: Southwest Industrial Park (SWIP) Specific Plan EIR
SCH# 2009091089

Attached for your review and comment is the Notice of Preparation (NOP) for the Southwest Industrial Park (SWIP) Specific Plan EIR draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Craig L. Bruorton
City of Fontana
8353 Sierra Avenue
Fontana, CA 92335

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Acting Director

Project Title Southwest Industrial Park (SWIP) Specific Plan EIR
Lead Agency Fontana, City of

Type **NOP** Notice of Preparation
Description NOTE: Review per lead October 29, 2009; Reference SCH# 1983091904

The Project proposes to comprehensive amendment to the original Specific Plan previously adopted in 1983 (and subsequently amended through 2008). In addition, the project proposes to annex an additional 472 acres (Almond Avenue Annexation Area). The total expansion will include an additional 1,318 acres from previous and proposed annexations, resulting in a total Project area of 3,110.7 acres. As part of this Specific Plan update a new land use plan would be created, as well as modifications and revisions to allowable uses, design guidelines, and development standards that govern new development within this area.

**RE: NOTICE OF INTENT TO PREPARE DRAFT ENVIRONMENTAL IMPACT REPORT FOR
THE SOUTHWEST INDUSTRIAL PARK (SWIP) SPECIFIC PLAN UPDATE AND
ANNEXATION**

Dear Mr. Bruorton:

Thank you for the opportunity to comment on the above-referenced project.

The County of San Bernardino Solid Waste Management Division is responsible for the management and oversight of all County landfill and waste transfer operations. As such, we would request that the following issues be addressed in the Environmental Impact Report::

- The creation of a new waste stream with this development and its impact on existing landfill capacity and traffic (information provided should include waste generation pre and post construction, estimated tonnage, existing approved tonnage at receiving landfill(s), potential increase in traffic at the development site [creation of new streets], traffic to the landfill itself, etc.);
- Requirements for handling recycling, construction and demolition debris (information should include existing recycling programs);
- Whether any hazardous waste will be generated, and, if so, types and quantities, including proposed disposal method(s) (information should address pre and post construction; i.e., will any hazardous materials be used during demolition and/or construction and the types/quantities of hazardous waste expected after project completion);
- Availability of commercial waste haulers and expected increases in traffic due to expanded hauler routes to serve the proposed development.

Should you have any questions or comments, please feel free to contact Mary Patterson, Senior Planner, by phone at (909) 382-3237; by facsimile at (909) 386-8964, by mail to the address listed above, or by e-mail to mpatterson@swm.sbcounty.gov.

Sincerely,

Nancy Sansonetti, AICP, Principal Planner/Chief

Subject: Southwest Industrial Park (SWIP) Specific Plan EIR

Dear Mr. Bruorton,

The Fontana Unified School District ("District") has received the Notice of Preparation of an EIR for the SWIP Specific Plan update dated September 15, 2009. The District has reviewed the materials and has the following comments.

Generally, the areas of District concern are traffic, noise, and future land use designations – more specifically, the potential creation of attractive nuisances. The District currently operates Kaiser High School (11155 Almond Avenue) within the boundaries of the SWIP specific plan area. Additionally, the new Jurupa Hills High School (10700 Oleander Avenue) which is opening in the Fall of 2010 is located on the east side of Citrus Avenue, directly across the street from the proposed SWIP specific plan boundary. School sites are classified as sensitive receptors, and both of these sites have the potential to be impacted by the specific plan expansion with respect to traffic and student transportation and safety, noise, and nearby zoning and land use issues.

Traffic

Currently, the area under consideration for addition to the SWIP specific plan is zoned primarily M-1, or light industrial, and is sparsely populated, primarily consisting of trucking and warehousing industrial uses with the occasional house. An increase in the number of warehouse, trucking, and other industrial uses has the potential to significantly increase traffic near the schools, and an increase in large truck traffic may pose a safety danger to students walking to and from school.

Specifically, the Almond Annexation area is located directly northwest of Kaiser High School, and contains two areas identified as "Residential Trucking District". Much of the area identified as "residential Trucking District" is already operating as trucking facilities; however, these districts are being established in part to "...provide additional opportunities for trucking uses..." An expansion of trucking uses would increase traffic and specifically large truck traffic in the area. Combined with the other nearby land use designations including the expansion of warehousing facilities, which by their nature would involve an increase in truck traffic in the area, an increase in traffic and large truck traffic is almost a certainty and the potential for traffic and safety problems related to student transportation to and from school increases.

In addition to the general traffic studies conducted, the District requests the EIR address the potential safety risks posed to students walking to and from school by an increase in large truck traffic. Potential mitigation measures could include identified trucking routes that avoid areas of high foot traffic, additional traffic control measures such as pedestrian crosswalks and stop signs, or designated truck hours on specified segments of streets to avoid school arrival and departure hours. This is especially important given that almost all of the land use districts identified have the stated goal of increasing truck traffic and transport throughout.

Noise

The location of the two high schools, one within and one adjacent to, with respect to the proposed SWIP boundary justifies study of the noise impacts created by the expansion of the specific plan area and the land use designations identified in the areas nearest to the schools. A large increase in large truck traffic has the potential to increase noise impacts at stationary receptor sites such as schools. Additionally, many of the specific land uses identified aim to increase truck and warehousing uses, which could potentially create additional noise impacts above and beyond those created by merely expanding the SWIP area.

Land Use

The new Jurupa Hills High School is located on the east side of Citrus Avenue just south of Slover Avenue, and is very near the area identified as "Freeway Industrial/Commercial", which would encourage the development of industrial as well as commercial uses. California Law requires commercial uses that serve alcohol must be located at least 600 feet from the nearest school site.

The District looks forward to reviewing the draft EIR. Should you have any questions or require further information regarding this matter, please contact me at (909) 357-7522, or via email at purema@fUSD.net.

Thank you for your assistance in this matter.

SUBJECT: Notice of Preparation
Southwest Industrial Park
Specific Plan EIR

Dear Mr. Bruorton:

Thank you for contacting the Morongo Band of Mission Indians regarding the above referenced project(s). The Tribe greatly appreciates the opportunity to review the project and, respectfully, offer the following comments.

The project is outside of the Tribe's current reservation boundaries but within an area that may be considered a traditional use area or one in which the Tribe has cultural ties (e.g. Cahuilla/Serrano territory). Because the project involves the preparation of an Environmental Impact Report for the Southwest Industrial Park the Tribe asks that you impose standard conditions regarding cultural and/or archaeological resources and buried cultural materials as follows:

- If human remains are encountered during mass or finished grading and other construction excavation, work in the immediate vicinity shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5.
- In the event that Native American cultural resources are discovered during project development/construction, all work in the immediate vicinity of the find shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the overall project may continue during this assessment period.

- If significant Native American cultural resources are discovered, for which a Treatment Plan must be prepared, the developer or his archaeologist shall contact the Morongo Band of Mission Indians ("Tribe")¹. If requested by the Tribe, the developer or the project archaeologist shall, in good faith, consult on the discovery and its disposition (e.g. avoidance, preservation, return of artifacts to tribe, etc.).
- If a cultural resource study is conducted for the project, the Morongo Band of Mission Indians respectfully requests a copy of said study.

If I may be of further assistance with regard to this matter, please do not hesitate to contact me at 951-755-5212 or FDANCY@MORONGO_NSN.GOV

very truly yours,

MORONGO BAND OF MISSION INDIANS

Franklin A. Dancy
Director of Planning

¹ The Morongo Band of Mission Indians realizes that there may be additional tribes claiming cultural affiliation to the area; however, Morongo can only speak for itself. The Tribe has no objection if the archaeologist wishes to consult with other tribes and if the city wishes to revise the condition to recognize other tribes.

Re: Notice of Preparation for SWIP Specific Plan EIR

The Soboba Band of Luiseño Indians appreciates your observance of Tribal Cultural Resources and their preservation in your project. The information provided to us on said project has been assessed through our Cultural Resource Department, where it was concluded that although it is outside the existing reservation, the project area does fall within the bounds of our Tribal Traditional Use Areas. This project location is in close proximity to known village sites and is a shared use area that was used in ongoing trade between the Luiseno and Cahuilla tribes. Therefore it is regarded as highly sensitive to the people of Soboba.

Soboba Band of Luiseño Indians is requesting the following:

1. To initiate a consultation with the Project Developer and Land owner.
2. The transfer of information to the Soboba Band of Luiseno Indians regarding the progress of this project should be done as soon as new developments occur.
3. Soboba Band of Luiseño Indians continues to act as a consulting tribal entity for this project.
4. Working in and around traditional use areas intensifies the possibility of encountering cultural resources during the construction/excavation phase. For this reason the Soboba Band of Luiseño Indians requests that Native American Monitor(s) from the Soboba Band of Luiseño Indians Cultural Resource Department to be present during any ground disturbing proceedings. Including surveys and archaeological testing.
5. Request that proper procedures be taken and requests of the tribe be honored
(Please see the attachment)

Sincerely,

Joseph Ontiveros
Soboba Cultural Resource Department
P.O. Box 487
San Jacinto, CA 92581
Phone (951) 654-5544 ext. 4137
Cell (951) 663-5279
jontiveros@soboba-nsn.gov

Cultural Items (Artifacts). Ceremonial items and items of cultural patrimony reflect traditional religious beliefs and practices of the Soboba Band. The Developer should agree to return all Native American ceremonial items and items of cultural patrimony that may be found on the project site to the Soboba Band for appropriate treatment. In addition, the Soboba Band requests the return of all other cultural items (artifacts) that are recovered during the course of archaeological investigations. When appropriate and agreed upon in advance, the Developer's archeologist may conduct analyses of certain artifact classes if required by CEQA, Section 106 of NHPA, the mitigation measures or conditions of approval for the Project. This may include but is not limited or restricted to include shell, bone, ceramic, stone or other artifacts.

The Developer should waive any and all claims to ownership of Native American ceremonial and cultural artifacts that may be found on the Project site. Upon completion of authorized and mandatory archeological analysis, the Developer should return said artifacts to the Soboba Band within a reasonable time period agreed to by the Parties and not to exceed (30) days from the initial recovery of the items.

Treatment and Disposition of Remains.

A. The Soboba Band shall be allowed, under California Public Resources Code § 5097.98 (a), to (1) inspect the site of the discovery and (2) make determinations as to how the human remains and grave goods shall be treated and disposed of with appropriate dignity.

B. The Soboba Band, as MLD, shall complete its inspection within twenty-four (24) hours of receiving notification from either the Developer or the NAHC, as required by California Public Resources Code § 5097.98 (a). The Parties agree to discuss in good faith what constitutes "appropriate dignity" as that term is used in the applicable statutes.

C. Reburial of human remains shall be accomplished in compliance with the California Public Resources Code § 5097.98 (a) and (b). The Soboba Band, as the MLD in consultation with the Developer, shall make the final discretionary determination regarding the appropriate disposition and treatment of human remains.

D. All parties are aware that the Soboba Band may wish to rebury the human remains and associated ceremonial and cultural items (artifacts) on or near, the site of their discovery, in an area that shall not be subject to future subsurface disturbances. The Developer should accommodate on-site reburial in a location mutually agreed upon by the Parties.

E. The term "human remains" encompasses more than human bones because the Soboba Band's traditions periodically necessitated the ceremonial burning of human remains. Grave goods are those artifacts associated with any human remains. These items, and other funerary remnants and their ashes are to be treated in the same manner as human bone fragments or bones that remain intact.

Coordination with County Coroner's Office. The Lead Agencies and the Developer should immediately contact both the Coroner and the Soboba Band in the event that any human remains are discovered during implementation of the Project. If the Coroner recognizes the human remains to be those of a Native American, or has reason to believe that they are those of a Native American, the Coroner shall ensure that notification is provided to the NAHC within twenty-four (24) hours of the determination, as required by California Health and Safety Code § 7050.5 (c).

Non-Disclosure of Location Reburials. It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or cultural artifacts shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The Coroner, parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code § 6254 (r).

Ceremonial items and items of cultural patrimony reflect traditional religious beliefs and practices of the Soboba Band. The Developer agrees to return all Native American ceremonial items and items of cultural patrimony that may be found on the project site to the Soboba Band for appropriate treatment. In addition, the Soboba Band requests the return of all other cultural items (artifacts) that are recovered during the course of archaeological investigations. Where appropriate and agreed upon in advance, Developer's archeologist may conduct analyses of certain artifact classes if required by CEQA, Section 106 of NHPA, the mitigation measures or conditions of approval for the Project. This may include but is not limited or restricted to include shell, bone, ceramic, stone or other artifacts.

RE: SWIP Specific Plan Update and Annexation

Dear Craig Bruorton

I will be on vacation until October 8th, but would otherwise attend the October 6, 2009 public scoping meeting.

My comments for consideration by the City will be the same as are being proposed for the SWIP Redevelopment Plan Amendment No. 9 Program EIR, and are enclosed.

I can be reached at the contact information above if there are questions or clarifications necessary.

Highest and best regards

Cecila Jackson
SWIP PAC Member: Business Owner

September 23, 2009

**OCTOBER 6, 2009 NOP AND PUBLIC SCOPING MEETING
SWIP Specific Plan Update and Annexation**

~~~~

My comments and suggestions on the environmental issues are as follows:

1. Establish minimum 3<sup>rd</sup> party certification requirements for *all* new construction, major rehabs, and new residential communities within the Project Area for energy and environmental design. As examples: Leadership in Energy and Environmental Design (LEED), Energy Star, and Americans with Disabilities Act (ADA).
2. Establish agency or manager to provide financial assistance, fee waivers, grants, rebates and incentives to businesses, landowners, homeowners and developers for energy and environmental protection. Potential sources of these incentives would be from federal, state, local governments, permitting processes and utility companies.
3. Significant consideration within the Project Area to reducing cumulative heat island effect resulting from proliferation of concrete structures. Mitigations could include an abundance of street trees to shade sidewalks; urban forests within residential communities; Tree City USA status within residential communities; and landscape greening of concrete tilt-ups adjacent to residential streets;
4. Establish exterior "Dark Sky" compliant lighting guidelines to reduce nighttime glare which interfere with migratory birds and residential quality of life. Considerations to be given to LED lighting which appear to be environmentally superior to fluorescent/mercury lighting?

Respectfully submitted by:

Cecila Jackson

Re: Notice of Preparation

To Whom It May Concern:

I, Ivan Vasilj the property owner of 14512 Aliso Dr. Fontana, Ca, am in agreement with the proposed expansion of the SWIP Specific Plan. I would like the current heavy industrial zoning to remain in effect with regards to my property.

My property is located in the Slover Central Manufacturing/Industrial District (SCD); I am in agreement with the proposed land use concept to promote trucking related businesses and uses. I would also like SCD to promote and encourage the use of construction related businesses, construction materials, equipment sales, storage and repairs.

I feel that the current right of way limits are too severe and the setbacks along property lines are too great. The current standards are too costly for any potential development to take place. During the current economic downturn, I feel that the City of Fontana should lessen the requirements for development and encourage new developments to be constructed within our City limits.

Sincerely,

  
Ivan Vasilj

Subject: NOP comments, SWIP update

Dear Mr. Bruorton

Per our phone discussion last week, I just received the attached notice of your Notice of Preparation(NOP) community meeting set for this Monday. As I explained on several occasions with you, I have several clients in the area that have trucking businesses which are located within the Almond Annexation area. I also note that the proposed SWD land use and description seems to limit such uses. The SWIP update will cluster trucking uses around Cherry Avenue and restrict or eliminate them in the Almond Annexation area. I believe that trucking uses should be spread out along the Slover and Santa Ana corridors rather than clustered around Cherry Ave, as proposed by your proposed land use plan. This will limit the amount of truck traffic congestion in the Cherry Ave. corridor area and open up more direct access to Mulberry Ave to the 60 Freeway and on Slover Ave, to the Etiwanda interchange on the 10 Freeway. The EIR should address this alternative, "clustering vs spreading" trucking over a greater area.

There should also be a list of interim uses permitted by the SWIP that includes trucking and other uses that are compatible with the base land use. This should also be addressed in the EIR.

I appreciate the opportunity to offer these comments and look forward to reviewing future drafts of the EIR and SWIP update.

Please add my comments to the NOP.

Steve Pleasant

Subject: SWIP Specific Plan Update & annexation  
Dear Stakeholder,

The City of Fontana would like to inform you of the upcoming Southwest Industrial Park Specific Plan (SWIP) Update and Annexation, Notice of Intent to Prepare Draft Environmental Impact Report. We have sent out notices to the property owners inside the SWIP boundaries and 660 foot radius outside the SWIP boundaries. You are receiving this informational e-mail because you are in the SWIP Distribution List. Please see the attached documents for additional information about the environmental process.

Sincerely,

## Chapter 7.o Jurupa North Research and Development District

|      |                                                  |       |
|------|--------------------------------------------------|-------|
| 7.1  | Purpose.....                                     | 7-1   |
| 7.2  | Applicability .....                              | 7-2   |
| 7.3  | Allowable Land Uses and Permit Requirements..... | 7-5   |
| 7.4  | Development Regulations.....                     | 7-7   |
| 7.5  | Landscape Standards.....                         | 7-15  |
| 7.6  | Parking and Loading Standards .....              | 7-22  |
| 7.7  | Sign Standards.....                              | 7-32  |
| 7.8  | Public Right-of-Way Streetscape .....            | 7-50  |
| 7.9  | Design Guidelines .....                          | 7-63  |
| 7.10 | Development Incentives .....                     | 7-105 |
| 7.11 | Entitlement Procedures .....                     | 7-111 |

## Chapter 8.o Jurupa South Industrial District

|      |                                                  |       |
|------|--------------------------------------------------|-------|
| 8.1  | Purpose.....                                     | 8-1   |
| 8.2  | Applicability .....                              | 8-2   |
| 8.3  | Allowable Land Uses and Permit Requirements..... | 8-5   |
| 8.4  | Development Regulations.....                     | 8-8   |
| 8.5  | Landscape Standards.....                         | 8-15  |
| 8.6  | Parking and Loading Standards .....              | 8-22  |
| 8.7  | Sign Standards.....                              | 8-29  |
| 8.8  | Public Right-of-Way Streetscape .....            | 8-45  |
| 8.9  | Design Guidelines .....                          | 8-57  |
| 8.10 | Development Incentives .....                     | 8-101 |
| 8.11 | Entitlement Procedures .....                     | 8-104 |

## Chapter 9.o Slover Central Manufacturing District

|     |                                                  |      |
|-----|--------------------------------------------------|------|
| 9.1 | Purpose.....                                     | 9-1  |
| 9.2 | Applicability .....                              | 9-2  |
| 9.3 | Allowable Land Uses and Permit Requirements..... | 9-5  |
| 9.4 | Development Regulations.....                     | 9-7  |
| 9.5 | Landscape Regulations .....                      | 9-14 |

|      |                                                |      |
|------|------------------------------------------------|------|
| 9.6  | Off-Street Parking and Loading Standards ..... | 9-20 |
| 9.7  | Sign Standards.....                            | 9-28 |
| 9.8  | Public Right-of-Way Streetscape .....          | 9-43 |
| 9.9  | Design Guidelines .....                        | 9-54 |
| 9.10 | Development Incentives .....                   | 9-87 |
| 9.11 | Entitlement Procedures .....                   | 9-90 |

## Chapter 10.0 Slover East Industrial District

|       |                                                  |       |
|-------|--------------------------------------------------|-------|
| 10.1  | Purpose.....                                     | 10-1  |
| 10.2  | Applicability .....                              | 10-2  |
| 10.3  | Allowable Land Uses and Permit Requirements..... | 10-5  |
| 10.4  | Development Standards .....                      | 10-8  |
| 10.5  | Landscape Standards.....                         | 10-15 |
| 10.6  | Parking and Loading Standards .....              | 10-21 |
| 10.7  | Sign Standards.....                              | 10-31 |
| 10.8  | Public Right-of-Way Streetscape .....            | 10-43 |
| 10.9  | Design Guidelines .....                          | 10-56 |
| 10.10 | Development Incentives .....                     | 10-92 |
| 10.11 | Entitlement Procedures .....                     | 10-95 |

## Chapter 11.0 Slover West Industrial District

|       |                                                  |       |
|-------|--------------------------------------------------|-------|
| 11.1  | Purpose.....                                     | 11-1  |
| 11.2  | Applicability .....                              | 11-2  |
| 11.3  | Allowable Land Uses and Permit Requirements..... | 11-5  |
| 11.4  | Development Standards .....                      | 11-8  |
| 11.5  | Landscape Standards.....                         | 11-15 |
| 11.6  | Parking and Loading Standards .....              | 11-21 |
| 11.7  | Sign Standards.....                              | 11-31 |
| 11.8  | Public Right-of-Way Streetscape .....            | 11-43 |
| 11.9  | Design Guidelines .....                          | 11-58 |
| 11.10 | Development Incentives .....                     | 11-87 |
| 11.11 | Entitlement Procedures .....                     | 11-97 |

## Chapter 12.0 Speedway Industrial District

|       |                                                  |        |
|-------|--------------------------------------------------|--------|
| 12.1  | Purpose.....                                     | 12-1   |
| 12.2  | Applicability .....                              | 12-2   |
| 12.3  | Allowable Land Uses and Permit Requirements..... | 12-5   |
| 12.4  | Development Regulations.....                     | 12-7   |
| 12.5  | Landscape Regulations .....                      | 12-15  |
| 12.6  | Parking and Loading Standards .....              | 12-21  |
| 12.7  | Sign Standards.....                              | 12-31  |
| 12.8  | Public Right-of-Way Streetscape .....            | 12-51  |
| 12.9  | Design Guidelines .....                          | 12-5   |
| 12.10 | Development Incentives .....                     | 12-111 |
| 12.11 | Entitlement Procedures .....                     | 12-114 |

## **Chapter 13.0 Residential Truck District**

|      |                                                  |       |
|------|--------------------------------------------------|-------|
| 13.1 | Purpose.....                                     | 13-1  |
| 13.2 | Applicability.....                               | 13-2  |
| 13.3 | Allowable Land Uses and Permit Requirements..... | 13-5  |
| 13.4 | Development Standards .....                      | 13-7  |
| 13.5 | Landscape Standards.....                         | 13-13 |
| 13.6 | Parking Standards.....                           | 13-15 |
| 13.7 | Sign Standards.....                              | 13-17 |
| 13.8 | Design Guidelines .....                          | 13-18 |
| 13.9 | Entitlement Procedures .....                     | 13-26 |

## **Chapter 14.0 Public Facilities District**

|      |                           |      |
|------|---------------------------|------|
| 14.1 | Purpose.....              | 14-1 |
| 14.2 | Applicability.....        | 14-1 |
| 14.3 | Allowable Land Uses ..... | 14-1 |

## TABLES

|            |                                                                         |       |

### **1.1 Project Location**

The SWIP Specific Plan is located on the southwestern edge of the City of Fontana, California (See Exhibit 1-1 – Regional Vicinity Map and Exhibit 1-2 – Local Vicinity Map). Fontana was incorporated on June 25, 1952 and became Southern California's leading producer of steel and related products. The steel industry dominated the City's economy until the late 1970's, when Kaiser Steel began to cut back on production and labor. In 1984, the Kaiser Steel facility closed, and the plate steel and rolling mill plants were both acquired by California Steel Company, which continues to produce steel products.

In addition to steel production, several industrial facilities, as well as warehousing and distribution facilities, are located in Fontana because of its strategic location along the I-15, I-210, I-10, and I-60 Freeways. As a result, this area is also home to several railroad and trucking facilities.

Exhibit 1-1 – Regional Vicinity Map

Exhibit 1-2 – Local Vicinity Map

## **1.2 Annexation**

In 2005, the City of Fontana proposed the annexation of approximately 2,920.9 acres (4.6+/- square miles) of unincorporated land within its sphere of influence. This annexation action concluded in 2007 and included 32 separately identified unincorporated “islands.” Of these, seven were located within the proposed boundaries of the SWIP Specific Plan.

As part of the 2005 Annexation process, the City prepared a Plan for Services for the proposed Annexation of Unincorporated Island Areas. The Plan for Services demonstrated that the population and service assumptions incorporated into the 2003 General Plan were consistent with the population projections and projections of service needs and capacities calculated for the annexation area in the 2005 Service Plan.

A portion (approximately 472 acres) in the northwest corner of the project site is currently in unincorporated San Bernardino County and is referred to as the Almond Avenue Annexation Area. The annexation area is bordered by interstate 10 on the north, Mulberry Avenue on the west, Almond Avenue on the east, and lies approximately 1,400 feet north of Jurupa Avenue. The City is proposing to annex this additional area into the City. The City is proposing to annex this additional area into the City as well as the SWIP Specific Plan.

### 1.3 Land Use Concept

The SWIP Specific Plan ("Specific Plan") includes nine land use districts with approximately 3,110 acres of industrial, manufacturing, office, commercial, research and development, and flex-tech development. Some existing residential areas will be preserved. Exhibit 1-3 – Land Use Map depicts the boundaries for each land use district within the Specific Plan project area and Table 1-1 – Build-Out provides build-out statistics for each of them.

Table 1-1 – Build-Out

| <i>SWIP Land Use District</i>          | <i>Acres</i> | <i>Commercial (SF)<sup>1</sup></i> | <i>Office (SF)</i> | <i>Industrial (SF)<sup>2</sup></i> | <i>Residential (DU)</i> | <i>Existing Development to Remain (SF)</i> | <i>Total (SF)/DU</i> |     |
|----------------------------------------|--------------|------------------------------------|--------------------|------------------------------------|-------------------------|--------------------------------------------|----------------------|-----|
| Freeway Industrial/Commercial          | 333.7        | 2,185,057                          | 546,264            | 2,731,321                          |                         | 478,645                                    | 5,462,642            |     |
| Speedway Industrial                    | 126.2        | 762,191                            |                    | 1,778,446                          |                         | 31,508                                     | 2,540,637            |     |

| Jurupa South Industrial                | 535.6        |                                    |                    | 2,249,874                          |                         | 7,241,326                                  | 2,249,874            |     |
| Residential Trucking                   | 51.7         |                                    |                    |                                    | 180*                    |                                            |                      | 180 |
| Public Facilities (Kaiser High School) | 37.7         |                                    |                    |                                    |                         |                                            | N/A                  |     |
| <b>Right of Way</b>                    | 334.7        |                                    |                    |                                    |                         |                                            | N/A                  |     |

**Assumptions:**

1. The Commercial Category includes service commercial and retail commercial land uses
2. The Industrial Category includes industrial and manufacturing uses, including but not limited to warehousing, flex-tech developments.

\* Existing residential units to remain within the Specific Plan area.

## 2.1 Policy Framework

A primary objective of the SWIP Specific Plan is to establish a policy and regulatory document that is a result of community participation and input. Several methods of outreach were used to inform citizens of Fontana, as well as citizens of San Bernardino County. These methods are listed below:

- Community Mail Brochures with contact information about the project were mailed to city and county residents.
- The project was discussed at Public Meetings.
- Information was made available on the City of Fontana Website.
- A Toll-Free Hotline was set up at City Hall.
- A SWIP Annexation/Open House was conducted.

## 2.2 Planning Factors

As part of the development of the Specific Plan, an extensive opportunities and constraints analysis was conducted. This analysis identified the opportunities, constraints, issues, concerns, and positive/negative attributes that influence and contribute to the successful implementation of the SWIP Specific Plan. The following planning factors highlight and summarize the facts and findings in the analysis:

- **Industrial Development History** - Fontana has had a longstanding history of Industrial Development. The Kaiser Steel Mill opened in 1942, and after closure in 1984, a shift in industrial services towards trucking and logistics-based distribution began within the area.
- **Gateway Opportunities** - The Specific Plan area abuts the I-10 Freeway for about 3.2 miles, which will provide an opportunity to serve as a gateway to the City and establish the image of the City.
- **Locational Factors** - The Specific Plan area is located in close proximity to some of the most heavily traveled freeways in the State of California. SR-60, I-10 and I-15 all provide major thoroughfares for truckers and motorists. In addition, Slover Avenue, located in the northern portion of the Specific Plan area, is a heavily traveled frontage road that provides access to the area.
- **Emerging Development Trends** - Market research indicates that demand for Industrial and logistics-based warehousing and distribution services will continue to increase in the Inland Empire through 2030. The Fontana industrial market is considered to have a healthy vacancy rate and healthy lease rates when compared to surrounding cities.

- **Existing Development Standards** - The existing industrial development standards need to be updated so the Specific Plan area can be competitive with surrounding market areas.
- **Existing Parcel Sizes and Development Availability** - The recent and proposed annexations within the Specific Plan area will result in an increase in the amount of parcels available for development. This in turn will provide opportunities for larger district areas within the overall Specific Plan area.
- **Infrastructure Upgrades** - Many roadways require improvements such as additional lanes, street signs/lights, additional traffic signals and medians to conform to the General Plan Circulation Element. Interchange improvements are being proposed at the I-10/Cherry Avenue, I-10/Beech Avenue, and I-10/Citrus Avenue interchanges. These infrastructure upgrades will improve access and mobility throughout the project site, as well as surrounding areas.
- **Underutilized Land** - A large percentage of acreage in the Specific Plan area is ready for more intensive development.
- **Non-Conforming Land Use and Sensitive Receptors** - Many of the uses within the Specific Plan Area were developed under San Bernardino County regulations and do not conform with current Fontana City regulations. As a result, several residential areas, and several sensitive uses will need to be accommodated through the use of additional development standards and buffers.

### 2.3 Guiding Principles

This Specific Plan contains Guiding Principles that are general statements of direction to guide decision-makers when evaluating development proposals and design concepts and determining if they support the overall intent of the Specific Plan.

- **Guiding Principle 1.0**  
Increase and maintain an increased daytime employment population.
- **Guiding Principle 2.0**  
Coordinate land uses and transportation with infrastructure planning.
- **Guiding Principle 3.0**  
Embrace flexible and diverse industrial land uses that foster economic development opportunities for the City of Fontana and surrounding areas.
- **Guiding Principle 4.0**  
Retain and expand existing businesses and business opportunities.

- **Guiding Principle 5.o**  
Improve pedestrian accessibility, vehicular access, and parking to establish safety throughout the Specific Plan Area.
- **Guiding Principle 6.o**  
Enhance the streetscape as well as the parking and loading areas throughout the Specific Plan area.
- **Guiding Principle 7.o**  
Tailor land use regulations and design guidelines to custom-fit the Specific Plan area.
- **Guiding Principle 8.o**  
Improve visual and functional linkages between I-10, Slover Avenue, and the City of Fontana.
- **Guiding Principle 9.o**  
Identify and prioritize development area and property assemblage opportunities to serve as economic development catalysts.
- **Guiding Principle 10.o**  
Coordinate and focus change in the Specific Plan area to enhance the sense of place and promote aesthetic improvements.
- **Guiding Principle 11.o**  
Incorporate planning policy that encourages viable development in the future, while paying tribute to Fontana's past.

## **2.4 Policy Objectives**

Objectives provide more explicit policy statements that implement the Specific Plan's Guiding Principles and provide consistency with policies contained in the Fontana General Plan.

Specific Plan Land Use (LU) Objectives include:

- **Objective LU-1**  
Establish incentives to encourage private development and investment in this sector of the City by creating a gateway along the I-10 corridor.
- **Objective LU-2**  
Contribute positively to the City-wide employment and economic base through implementation of a viable southern employment center within the City of Fontana.

- **Objective LU-3**  
Create land use districts that encourage high quality development responsive to market demands and Fontana development objectives.
- **Objective LU-4**  
Incorporate modulated building volumes, mass, height, and articulated facades to create spaces suitable for industrial development throughout the SWIP Specific Plan Area.
- **Objective LU-5**  
Create a gateway district which will incorporate wayfinding mechanisms and will create transportation and aesthetic linkages between the I-10 and the City of Fontana.
- **Objective LU-6**  
Develop incentives to encourage the reuse of underutilized land.
- **Objective LU-7**  
Provide specific requirements that enhance public amenities for new development and rehabilitation.
- **Objective LU-8**  
Allow a mix of industrial uses to capitalize on the market potential within the City of Fontana and surrounding region.

## **2.5 Circulation, Parking and Infrastructure (CIR) Objectives**

- **Objective CIR-1**  
Create a street system capable of handling large transportation flows from trucks.
- **Objective CIR-2**  
Provide work opportunities near existing housing to reduce traffic congestion along major freeways and local roads.
- **Objective CIR-3**  
Ensure potential transportation impacts on the Specific Plan are identified and mitigated to the greatest extent feasible.
- **Objective CIR-4**  
Ensure vehicular traffic Level of Service (LOS) meets or exceeds adopted City wide Standards.

- **Objective CIR-5**

Ensure infrastructure capacity within the Specific Plan Area meets future demands.

## **2.6 Environmental (ENV) Objectives**

- **Objective ENV-1**

Ensure potential environmental effects of the Specific Plan are mitigated to a less than significant level where feasible.

- **Objective ENV-2**

Establish methods and strategies for the conservation of resources, including water use and drought tolerant landscaping.

## **2.7 Landscape (LS) Objectives**

- **Objective LS-1**

Incorporate landscaped parkways, parking lots, and pedestrian walkways separated from the street to enhance safety and enjoyment of residents and employees.

- **Objective LS-2**

Incorporate a system of on- and off-street bicycle pathways with access from the residences to employment areas.

## **2.8 Design (D) Objectives**

- **Objective D-1**

Enhance the area through a streetscape improvement and gateway plan with an implementation program that reinforces the identity of each district and includes a hierarchy of entry monumentation and landscaping.

- **Objective D-2**

Prepare design guidelines as a tool to facilitate exemplary and innovative design; promote development that is compatible with the surrounding environment; serve as a resource of ideas for project applicants; and perform as an objective reference for City review of project applications.

## **2.9 Implementation and Administration (IMP) Objectives**

- **Objective IMP-1**

Establish a tier-review process for discretionary development application review to streamline the approval process.

- **Objective IMP-2**

Prepare an Environmental Impact Report as the primary tiering clearance document to streamline additional project level environmental reviews.

- ***Objective IMP-3***

Integrate design guidelines within the design review process to streamline discretionary review.

### **3.1 Circulation Master Plan**

The Circulation Master Plan for the SWIP Specific Plan focuses on connectivity to the I-10, I-15, and SR-60 Freeways, as well as connectivity along primary major roadways and truck routes. The Circulation Plan, illustrated in Exhibit 3-1, provides necessary roadway improvements to accommodate traffic generated by the anticipated Land Use Plan. As a component of this project, a comprehensive traffic analysis was prepared, which identified existing conditions, forecasted future conditions, and provided recommended roadway segment and intersection improvements to address project-related significant impacts associated with the build-out of the anticipated land use plan. This analysis is provided in the technical appendices of the SWIP Specific Plan EIR.

The traffic analysis prepared for the SWIP Specific Plan determined that the anticipated build-out of the SWIP Specific Plan will impact local roadways.

### **3.2 Initial Roadway Segment Improvements**

To prevent the identified local impacts, the following initial improvements are recommended to keep roadway segments functioning as 2030 build-out is approached. Recommended improvements are noted below.

#### **Improvement No. 1 – Mulberry Avenue**

Construct Mulberry Avenue connection from Slover Avenue to Valley Boulevard over I-10 freeway in order to provide additional north-south capacity, reducing forecast traffic on Etiwanda Avenue and Cherry Avenue. This improvement is consistent with City of Fontana General Plan Circulation Master Plan.

#### **Improvement No. 2 – Beech Avenue**

Construct Beech Avenue from Slover Avenue to Valley Boulevard including an interchange with I-10 in order to provide additional north-south capacity and freeway access, reducing forecast traffic on Cherry Avenue and Citrus Avenue. This improvement is consistent with City of Fontana Circulation General Plan Circulation Master Plan.

#### **Improvement No. 3 – Jurupa Avenue between Etiwanda Avenue and Mulberry Avenue**

Widen the study roadway segment from a 4-lane divided roadway segment to a 6-lane divided roadway segment. This improvement is consistent with the City of Fontana General Plan Circulation Master Plan.

#### **Improvement No. 4 – Mulberry Avenue between Slover Avenue and Santa Ana Avenue**

Widen the study roadway segment from a 2-lane undivided roadway segment to a 4-lane undivided roadway segment. This improvement is consistent with the City of Fontana Circulation Master Plan.

# Southwest Industrial Park Specific Plan

## Transportation and Circulation

Exhibit 3-1 – Circulation Master Plan

**Improvement No. 5 – Slover Avenue east of Mulberry Avenue**

Widen the study roadway segment from a 4-lane divided roadway segment to a 6-lane divided roadway segment. Requires General Plan Circulation Master Plan update.

**Improvement No. 6 – Jurupa Avenue between Mulberry Avenue and Calbash Avenue**

Widen the study roadway segment from a 4-lane divided roadway to a 6-lane divided roadway. This improvement is consistent with the City of Fontana General Plan Circulation Master Plan.

**Improvement No. 7 – Slover Avenue between Redwood Avenue and Live Oak Avenue**

Widen the study roadway segment from a 4-lane divided roadway segment to a 6-lane divided roadway segment. Requires General Plan Circulation Master Plan update.

**Improvement No. 8 – Beech Avenue between Slover Avenue and Santa Ana Avenue**

Widen the study roadway segment from a 2-lane divided roadway to a 4-lane divided roadway. Requires General Plan Circulation Master Plan update.

**Improvement No. 9 – Citrus Avenue between Slover Avenue and Santa Ana Avenue**

Widen the study roadway segment from a 2-lane undivided roadway segment to a 4-lane undivided roadway segment. Requires General Plan Circulation Master Plan update.

**Improvement No. 10 – Citrus Avenue between Santa Ana Avenue and Jurupa Avenue**

Widen the study roadway segment from a 2-lane undivided roadway segment to a 4-lane undivided roadway segment. Requires General Plan Circulation Master Plan update.

**Improvement No. 11 – Slover Avenue between Oleander Avenue and Cypress Avenue**

Widen the study roadway segment from a 4-lane divided roadway segment to a 6-lane divided roadway segment. Requires General Plan Circulation Master Plan update.

### **3.3 Additional Roadway Segment Improvements**

The ultimate 2030 build-out of the SWIP Specific Plan will be addressed in the SWIP Environmental Impact Report (EIR). These improvements are needed because anticipated 2030 build-out will generate more impacts to the local circulation system, even with the previously identified improvements in place.

### **3.4 Intersection Improvements**

A total of 45 intersections have been chosen as study intersections within the SWIP Specific Plan area. The traffic congestion generated by the 2030 buildout of the SWIP Specific Plan have been addressed in the SWIP Environmental Impact Report (EIR).

### **3.5 Truck Routes**

Many of the roads within and around the SWIP Specific Plan area are designated as truck routes. The SWIP Specific Plan proposes multiple truck routes, in accordance with the Fontana General Plan Circulation Element. Truck routes within the SWIP Specific Plan area are depicted in Exhibit 3-2 – Truck Routes, along the following roadways:

#### **East to West**

- Valley Boulevard
- I-10
- Slover Avenue
- Santa Ana Avenue
- Jurupa Avenue
- Marlay Avenue

#### **North to South**

- Etiwanda Avenue
- Mulberry Avenue
- Cherry Avenue
- Beech Avenue
- Citrus Avenue

### **3.6 Pedestrian and Bicycle Circulation**

Pedestrian and bicycle circulation routes are anticipated within the SWIP Specific Plan, consistent with the Trails Plan and Bicycle Plan shown in the General Plan Circulation Element. It is anticipated that the provision of pedestrian and bicycle trails will foster multi-modal transportation opportunities and connections in a project area heavily centered on the automobile and truck. Pedestrian routes include a Southern California Edison Utility easement just south of Jurupa Avenue and a pedestrian trail that connects through the Jurupa South Industrial Sub-District, between Etiwanda and Mulberry Avenue. Class I Bike Paths are proposed just south of Jurupa Avenue, within the existing SCE Utility easement, and along the San Sevaine Creek Channel, which runs in a north to south direction through the JSD Sub-District between Etiwanda and Mulberry Avenue. Class II Bike Lanes are proposed along San Bernardino Avenue, Santa Ana Avenue, and Poplar Avenue within the SWIP Specific Plan area. Proposed pedestrian and bicycle routes can be seen in Exhibit 3-3 – Pedestrian and Bicycle Circulation Plan.

#### **4.1 Water Services and Recycled Water**

##### **A. Domestic and Recycled Water**

###### **1. Background**

The SWIP Specific Plan area is within the service area of the Fontana Water Company (FWC), a private water purveyor which provides water service to the City of Fontana. Based on the 2005 Water System Master Plan, FWC will rely on up to 75 percent of its total water supply from local groundwater sources drawing from the Chino Basin. Therefore, FWC plans to develop new water supply sources based on this percentage, which will require construction of new water facilities for, and possibly within, the SWIP Specific Plan area. The Chino Basin is an adjudicated basin which requires imported sources for basin replenishment. The new facilities are expected to be required due to the estimated increase in water demands of the SWIP Specific Plan area to approximately 3.47 Million Gallons per Day (MGD) on average, and 6.93 MGD during a maximum summer day.

###### **2. Existing Conditions**

The existing water system serves the current land uses within the SWIP Specific Plan area with potable (domestic) water, and is owned and operated by the Fontana Water Company (FWC). Water supply is from local groundwater and surface water sources, and imported water from San Bernardino Valley Municipal Water District (SBVMWD) and Inland Empire Utilities Agency (IEUA). In order to accommodate the expected increase in water demands for the SWIP Specific Plan area, FWC will require increased capacity from these sources. The 2005 FWC Water System Master Plan (WSMP) indicates the Company has interest in re-activating groundwater production at sites within, and adjacent to, the SWIP Specific Plan. The existing FWC water distribution system is necessarily divided into service pressure zones to maintain operating pressures within acceptable limits and for water service redundancy and reliability.

The SWIP Specific Plan area is within the FWC Juniper pressure zone and serves the existing land uses. Due to the range of service elevations, the Juniper system is divided into high and low subzones. The SWIP topography generally slopes southwesterly with the highest elevations at Citrus and Slover Avenues. The service boundary is generally defined by Santa Ana Avenue and Live Oak Avenue. Development to the north and east are served by the Juniper-high subzone, while the remainder of the SWIP area to the south and west are served through pressure-reducing stations for the Juniper-low subzone.

The service pressure zone serving the SWIP Specific Plan area operates at supply hydraulic gradient of approximately 1,260 feet above mean sea level. The SWIP Specific Plan area is at approximate service elevations ranging from 850 feet to 1100 feet. For efficient service to the existing land uses, FWC pressure-reduces the Juniper Zone for manageable service pressures south and west of Santa Ana Avenue and Live Oak Avenue.

###### **3. Domestic Water Analysis**

Distribution storage and pumping work in unison with the pipeline conveyance system in order to effectively distribute service flows to all customers within the Juniper Zone. Juniper Zone storage tanks directly "float" the Juniper-high subzone from off-site storage facilities with a

total capacity of 7.1 MG. Optimum distribution storage capacity is typically 50- to 100-percent of daily demand volume, depending on operational needs and desired level of service redundancy. In addition, fire flow volume may also be included in distribution storage tanks. Optimum pumping capacity is typically between 100- and 150- percent of maximum daily flow, plus fire flow if fire flow volume is not included in “floating” storage. According to the WSMP, the ultimate Juniper Zone storage requirement is 4.56 MG. The SWIP water demand estimated for the WSMP should be verified; however, it appears any increase in proposed Specific Plan land use densities over those anticipated in the WSMP can be accommodated in existing storage.

Existing distribution capacity may be sufficient for ultimate SWIP land uses. However, hydraulic analysis using computer simulation should be performed as part of master planning and preliminary design of the initial system upgrades. This will provide FWC engineering staff alternative looping and pipe size configurations, for flexibility and constructability, to meet critical service scenarios. For the purposes of the SWIP Specific Plan Domestic Water Study, it is assumed that fire flow requirements would dictate the sizing of the distribution system.

In order to meet standard accepted velocity and headloss criteria during fire flow conditions, Table 4-1 provides figures to use as a general rule to guide minimum pipe sizes:

| Table 4-1 – Minimum Pipe Sizes                                                                                                                                                                              |                                |                                         |                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|-----------------------------------------|----------------|

| Commercial, Office                                                                                                                                                                                          | 5,000 gpm                      | 16-inch                                 | 12-inch        |
| Service Commercial                                                                                                                                                                                          | 3,500 gpm                      | 12-inch                                 | 10-inch        |
| Light Industrial                                                                                                                                                                                            | 5,000 gpm                      | 16-inch                                 | 12-inch        |
| Flex Tech                                                                                                                                                                                                   | 5,000 gpm                      | 16-inch                                 | 12-inch        |
| Warehousing                                                                                                                                                                                                 | 5,000 gpm                      | 16-inch                                 | 12-inch        |
| Manufacturing                                                                                                                                                                                               | 5,000 gpm                      | 16-inch                                 | 12-inch        |
| Residential                                                                                                                                                                                                 | 1,500 gpm                      | 10-inch                                 | 8-inch         |
| Note: Fire Department flow requirements should be validated on a case by case basis, and hydraulic analysis simulation should be performed to verify service capacity and reliability for adequate service. |                                |                                         |                |

Based on the anticipated build-out of the SWIP Specific Plan, it is recommended that the SWIP area domestic water distribution system be upgraded pursuant to all pipe sizes shown in Table 4-1 and Exhibit 4-1 – Water Master Plan.

It should be noted that a significant component of the ultimate domestic water demands may be served from future non- domestic water sources, such as recycled water, which is discussed below.

Exhibit 4-1 – Water Master Plan

#### 4. Recycled Water Analysis

Currently, Fontana Water Company (FWC) does not operate a separate recycled water distribution system within the SWIP Specific Plan area. However, IEUA plans to construct the Wineville Extension for delivery of recycled water from their Regional Plant (RP-4) wastewater treatment plant, located in Rancho Cucamonga. This delivery system could allow for direct service within the west SWIP sub-area. Exhibit 4-1 – Water Master Plan shows the currently planned location of the Wineville Extension in Marlay Avenue. It is estimated that this system could serve candidate non-domestic water uses and conserve potable water sources.

With the proposed implementation of recycled (non-domestic) water service to the SWIP Specific Plan, the increase in domestic water demands can be reduced. The Inland Empire Utilities Agency (IEUA) recognizes that the availability of critical imported water sources continue to decline, both in capacity and reliability while the region continues to develop, outpacing water conservation efforts. The Chino Basin Water master has also documented the economic benefits of maximizing the use of recycled water. Each of IEUA's member agencies are expected to take advantage of the opportunities to offset the need for expensive imported water supplies. IEUA plans to achieve this by maximizing recycled water from their regional distribution system for candidate uses within their member agencies' service areas. The SWIP Specific Plan area may provide the City with industrial customers that will implement centralized boiler and chiller systems, material cooling and washdown systems, as well as landscape irrigation. All of these could potentially be candidate uses of recycled water.

#### 4.2 Sewer Services

##### A. Waste Water

The SWIP Specific Plan area is within the sewer service area of the City of Fontana and the Inland Empire Utilities Agency (IEUA). Fontana is a member agency of the IEUA, which provides the City contracting privileges with the Agency for off-site collection, treatment, disposal and reuse. In order to accommodate the expected increase in wastewater from the SWIP Specific Plan, the City will require increased capacities from IEUA treatment and disposal facilities, and City collection facilities. In addition, the two agencies have plans to expand recycled water service from off-site treatment plants to the SWIP area.

##### 1. Existing Conditions

The current wastewater collection system serves only current land uses within city limits and is owned and operated by the City of Fontana. Current land uses within the SWIP Specific Plan area, but not within current city limits, are served by private wastewater systems. Two major collection systems owned and operated by the IEUA serve City flows and are located within the western portion of the Specific Plan area within Jurupa Avenue and Marlay Avenue. These systems collect all flow from the SWIP Specific Plan area and much of the eastern portion of Fontana. A City flow control structure at Jurupa Avenue and Beech Avenue allows the City to optimize the capacities of each system. Exhibit 4-2 Sewer Master Plan, shows existing waste water infrastructure.

Exhibit 4-2 – Sewer Master Plan

**2. Waste Water System Analysis**

The existing topography within the SWIP Specific Plan area ranges in elevation from 1100 feet (above mean sea level) at the northeast end to 850 feet at the southwest end. The general drainage direction from the northeast to the southwest is at an average slope of approximately one percent. Although this would seem favorable for gravity sewer systems (which have been considered), potential unidentified constraints for areas not currently sewered, as well as those areas that may require sewer upgrades, will likely prove challenging to maintaining gravity flow conditions during future design and construction. During interim operating conditions of the expanded use areas to be annexed into the City, temporary lifting for service flows from individual development projects may be necessary.

Existing sewerage collection capacity may be sufficient for ultimate proposed SWIP land uses for the areas currently within the City limits. However, new sewer systems will be required for all annexed areas. Hydraulic analysis using computer simulation should be performed as part of master planning and preliminary design of the initial system upgrades, in order to provide the City engineering staff alternative collection alignments and pipe size configurations to meet critical service flow scenarios of the annexed areas. Alternative configurations will be essential as the City moves into the design phase for system expansion to serve development and redevelopment projects within the Specific Plan area. For the purposes of the Specific Plan, and to meet standard minimum velocity criteria during dry weather conditions, Table 4-2 provides a guide to determine future pipe sizes:

| <b>Table 4-2 – Future Sewer Pipe Sizes</b> |                                 |                                 |                                            |
|--------------------------------------------|---------------------------------|---------------------------------|--------------------------------------------|
| <i><b>Size</b></i>                         | <i><b>Allowable<br/>d/D</b></i> | <i><b>Minimum<br/>Slope</b></i> | <i><b>Maximum Allowable Flow (gpm)</b></i> |
| 8-inch                                     | 50%                             | 0.0040                          | 172                                        |
| 10-inch                                    | 50%                             | 0.0028                          | 278                                        |
| 12-inch                                    | 50%                             | 0.0022                          | 375                                        |
| 15-inch                                    | 67%                             | 0.0015                          | 886                                        |
| 18-inch                                    | 75%                             | 0.0012                          | 1,489                                      |
| 21-inch                                    | 75%                             | 0.0010                          | 2,051                                      |
| 24-inch                                    | 75%                             | 0.0008                          | 2,619                                      |

Note: Hydraulic analysis using computer simulation should be performed as part of master planning and preliminary design of the initial system upgrades on a case-by-case basis.

**3. Wastewater System Improvements**

The anticipated build-out of the SWIP Specific Plan will result in a need for upsizing wastewater facilities. In order to accommodate the expected increase in wastewater generated by the SWIP Specific Plan, the City will require increased capacities from IEUA treatment and disposal facilities, and City collection facilities. Recycled water service from off-site treatment plants to the SWIP area is also planned in the future. Thus, upsizing of waste water pipes will be necessary to handle increased wastewater volumes. All recommended future waste water system improvements may be seen in Exhibit 4-2 – Sewer Master Plan.

### 4.3 Solid Waste

Solid waste disposal services for the City of Fontana are handled by Burrtec Waste Industries (Burrtec). Burrtec is a private company with a franchise agreement with the City of Fontana. In addition to solid waste disposal, Burrtec also operates the City's curbside recycling program. The Mid-Valley Landfill located in Rialto, adjacent to the City of Fontana, is the primary solid waste depository in the area. The landfill is projected to have approximately 34 years of capacity left. The City of Fontana operates a number of programs to reduce, recycle and properly divert solid waste from the sanitary landfills to meet the State of California's mandate. These programs include, but are not limited to, a permanent Household Hazardous Waste Collection facility; xeriscaping/grass recycling programs; and a Household Material Reuse Center.

### 4.4 Flood Control and Hydrology

#### A. Storm Drain System

##### 1. Background

In 1992 the City of Fontana developed a Master Plan of Drainage for the entire City and the Fontana Sphere of Influence. The study was divided into several areas with additional sub-drainage areas. The Southwest Industrial Park (SWIP) lies in the South Fontana Drainage Area. This drainage area is located southerly of the West Fontana Channel and northerly of the ridge line of the Jurupa Mountains. This area drains to the San Sevaine Channel via the I-10 channel and the Declez Chanel and major storm drains in Randall Avenue, San Bernardino Avenue and Valley Boulevard. Several smaller storm drains also join the San Sevaine Channel directly.

##### 2. Existing Conditions

The Specific Plan area does not currently have a system of organized storm drain facilities. There are reinforced concrete pipe (RCP) storm drains in both Beech and Hemlock Avenue that extend south from Slover Avenue to 1,300 feet north of Jurupa Avenue. Most of the study area drains to the Declez Channel via storm drain facilities. A portion of the study area drains to the San Sevaine Channel via existing storm drain system.

The San Sevaine Channel lies on the west end of the specific plan area. It provides drainage for the San Gabriel Mountains and a substantial part of the city north of I-10. The channel is improved where it traverses the SWIP Specific Plan Area. A small part of the SWIP Specific Plan area is within a FEMA flood zone AE. Zone AE is an area with a 1% (100-yr flood) chance of flooding and the Base Flood Elevations (BFE) have been determined from detailed analyses.

The Declez Channel generally follows the base of the Jurupa Mountains on their northern slope. The channel is fully improved and discharges to the San Sevaine Channel approximately one mile south of the City of Fontana, in Riverside County. Existing storm drain infrastructure identified in portions of Mulberry Avenue, Almond Avenue, Cherry Avenue, Hemlock Avenue, Beech Avenue, Elm Avenue, and Citrus Avenue, is shown in Exhibit 4.3 – Storm Drain Master Plan.

**3. Analysis**

Impervious surfaces contribute to the volume of storm water runoff. To complete the storm water runoff analysis, the SWIP Specific Plan area is divided into 17 sub-areas. Existing percentages of impervious surfaces (such as building surfaces or pavement) were noted and the percent of existing impervious surface within each sub area was identified. Following the establishment of existing impervious surfaces, the anticipated 2030 build-out of the SWIP Specific Plan was analyzed, and concluded that anticipated build-out will substantially increase the amount of impervious surface area, as shown in Table 4-3.

| <b>Table 4-3 – Existing Impervious Surface and 2030 Impervious Surface Comparison</b> |                                           |                                                 |                          |
|---------------------------------------------------------------------------------------|-------------------------------------------|-------------------------------------------------|--------------------------|
| <b><i>Sub-Area</i></b>                                                                | <b><i>Existing Impervious Surface</i></b> | <b><i>2030 Build-out Impervious Surface</i></b> | <b><i>% Increase</i></b> |
| 1A                                                                                    | 0.52                                      | 0.76                                            | 31.45                    |
| 2A                                                                                    | 0.51                                      | 0.80                                            | 36.42                    |
| 3A                                                                                    | 0.50                                      | 0.81                                            | 38.38                    |
| 4A                                                                                    | 0.49                                      | 0.83                                            | 41.20                    |
| 5A                                                                                    | 0.49                                      | 0.83                                            | 41.29                    |
| 6A                                                                                    | 0.48                                      | 0.83                                            | 41.53                    |
| 7A                                                                                    | 0.52                                      | 0.80                                            | 34.52                    |
| 8A                                                                                    | 0.55                                      | 0.87                                            | 36.49                    |
| 9A                                                                                    | 0.56                                      | 0.88                                            | 36.53                    |
| 1B                                                                                    | 0.54                                      | 0.63                                            | 14.29                    |
| 2B                                                                                    | 0.54                                      | 0.63                                            | 14.29                    |
| 3B                                                                                    | 0.54                                      | 0.63                                            | 14.29                    |
| 4B                                                                                    | 0.54                                      | 0.63                                            | 14.29                    |
| 5B                                                                                    | 0.54                                      | 0.63                                            | 14.29                    |
| 6B                                                                                    | 0.54                                      | 0.63                                            | 14.29                    |
| 1C                                                                                    | 0.71                                      | 0.90                                            | 21.11                    |
| 1D                                                                                    | 0.56                                      | 0.87                                            | 35.63                    |

It is not anticipated that existing storm drain facilities in and around the SWIP Specific Plan area will be adequate enough to handle the increased flows that will result from increasing impervious surfaces in the SWIP Specific Plan area through the 2030 build-out. Improvements to the storm drain system are required.

Exhibit 4-3 – Storm Drain Master Plan

**B. Proposed Improvements**

The Fontana Master Plan of Drainage identifies necessary improvements within the Specific Plan area as the City of Fontana approaches build-out thresholds. All necessary upgrades associated with the 2030 build-out of the SWIP Specific Plan are to be done in accordance with the Fontana Master Plan of Drainage, as shown in Exhibit 4-3 – Storm Drain Master Plan. These improvements are as follows:

**Improvement No. 1 – Calabash Avenue**

Construct 51" storm drain facility along Calabash Avenue which drains south to existing storm drain facility along Jurupa Avenue.

**Improvement No. 2 – Banana Avenue**

Construct 42" storm drain facility along Banana Avenue which drains south to existing storm drain facility along Jurupa Avenue.

**Improvement No. 3 – Almond Avenue**

Construct 36" storm drain facility along Almond Avenue which drains south to existing storm drain facility along Jurupa Avenue.

**Improvement No. 4 – Cherry Avenue**

Construct 39" storm drain facility along Cherry Avenue which drains south to existing storm drain facility along and south of Jurupa Avenue.

**Improvement No. 5 – Live Oak Avenue**

Construct 45" storm drain facility which drains south to existing storm drain facility along and south of Jurupa Avenue.

It should be noted that in addition to each of the storm drain improvements listed above, project proponents will be required to submit a Storm Water Pollution Prevention Plan (SWPPP) prior to commencement of project construction. A Notice of Intent (NOI) is required to be filed with the State Water Resources Control Board (WRCB) before construction begins, and a Notice of Termination is required to be filed with the WRCB once construction is complete. This process is required on a site-by-site basis throughout the anticipated build-out of the SWIP Specific Plan.

**4.5 Natural Gas**

Natural gas service for the Project Area is provided by The Gas Company. The Gas Company operates a planning office in Riverside that maintains information on existing lines, forecasts future needs, and analyzes the size and location of future service pipelines. The Gas Company supplies natural gas to nearly all of Southern and Central California. The Gas Company's primary sources include the El Paso Natural Gas Company and the Transwestern Pipeline Company.

#### **4.6 Electric Service, Telephone, Cable Television and Internet**

The proposed land use changes in the Specific Plan will have some impacts on the demands for telephone, cable television, internet and electricity services. Purveyors of these utilities, including AT&T, Verizon, Time Warner Cable, and Southern California Edison, will be responsible for necessary improvements.

#### **4.7 Fire Protection**

Fire protection services for the Southwest Industrial Park will be provided by the Fontana Fire Protection District.

The following Valley Division Stations service the City of Fontana:

- **Valley Division - Station 71**  
16980 Arrow Blvd.
- **Valley Division - Station 72**  
15380 San Bernardino Ave  
P.O. Box 1040
- **Valley Division - Station 73**  
14360 Arrow
- **Valley Division - Station 74**  
11500 Live Oak
- **Valley Division - Station 77**  
17459 Slover
- **Valley Division - Station 78**  
7110 Citrus
- **Valley Division - Station 79**  
5075 Coyote Canyon Rd

## **5.1 Establishment and Adoption**

### **A. Statutory Authority**

The Southwest Industrial Park (SWIP) Specific Plan is established through the authority granted to the City of Fontana by California Government Code, Title 7, Division 1, Chapter 3, Article 8, Sections 65450 through 65457 (Specific Plans).

### **B. Adoption**

This Specific Plan is a regulatory document, adopted by ordinance.

### **C. California Environmental Quality Act**

The SWIP Specific Plan has been prepared in compliance with the requirements of the California Environmental Quality Act (CEQA). Pursuant to State and Local CEQA Guidelines, the City of Fontana prepared an expanded Notice of Preparation. The City has determined that the Specific Plan will result in additional environmental impacts, and therefore, required environmental analysis. As a supplement to this Specific Plan, an Environmental Impact Report (EIR) has been prepared to respond to the anticipated environmental impacts associated with the project. The Southwest Industrial Park Specific Plan EIR is a program-level EIR and includes an Introduction, Project Description, description of existing environmental conditions, assessment of impacts and mitigation measures as directed by the City of Fontana, in accordance with CEQA.

## **5.2 Applicability**

### **A. Relationship to the General Plan**

The current City of Fontana General Plan was last updated in 2003. Chapter 1 (Introduction) provides current land use build-out estimates and Chapter 2 (Policy Framework) provides other development policies that supplement the General Plan Land Use Element. The Specific Plan's regulations are consistent with the directives of the General Plan's goals, policies, and actions.

### **B. Relationship to the Zoning and Development Code**

The provisions contained in this SWIP Specific Plan constitute the primary land use and development standards for the Specific Plan area. These regulations are in addition to the provisions in the City of Fontana Municipal Code.

This Specific Plan provides all development standards and guidelines necessary to approve subsequent project applications, unless otherwise noted. Permit processing procedures (e.g., noticing, hearing, appeals, and expiration procedures) and enforcement procedures are provided in Municipal Code Chapter 30 (Zoning and Development Code) shall apply, unless otherwise noted. Where there is a conflict between the provisions in this Specific Plan and those in the Zoning and Development Code, the Specific Plan provisions shall prevail to the extent allowable under Federal or State law. Where there is no conflict, both shall be applied concurrently.

### **5.3 General Plan Amendments**

Amendments to the appropriate General Plan Elements and other related conforming amendments to the General Plan Land Use Map and General Plan Exhibits shall be performed to ensure that the SWIP Specific Plan and the City General Plan, as amended, are internally consistent.

### **5.4 Zoning Code/Map Amendments**

The existing zoning classifications within the SWIP Specific Plan area, include Community Commercial, Light Industrial, General Industrial and Public Facilities. Upon adoption of the SWIP Specific Plan, these zoning designations shall be revoked and replaced with a Specific Plan Area zoning designation. The following amendments to the Fontana Zoning Code and Zoning Map shall apply:

- **Specific Plan.** The City of Fontana shall adopt the of the SWIP Specific Plan by Ordinance thereby establishing the regulatory policy for the Specific Plan area, inclusive of each zoning sub-district of the Specific Plan. The Specific Plan shall provide land use and development regulations, as well as design guidelines applicable to legal parcels within the Specific Plan area
- **Zone Change.** Change the current zoning classifications for parcels of land within the Specific Plan area from their current zoning classifications to a Southwest Industrial Park Specific Plan zoning classification.
- **Zoning Map Amendment.** The City of Fontana Zoning Map shall be amended to indicate the geographic boundaries of the Specific Plan . The SWIP Specific Plan shall be indicated by a SP classification on the City of Fontana Zoning Map.

### **5.5 Specific Plan EIR and Mitigation Monitoring**

The Specific Plan has been prepared in conjunction with a program-level Environmental Impact Report that identifies potential impacts resulting from proposed development and establishes mitigation measures to reduce the impacts to a less than significant level, where feasible.

As the Lead Agency the City of Fontana will implement a monitoring program for the identified mitigation measures. A Mitigation Monitoring Program will be developed by the City as part of environmental findings and included in the Final Specific Plan approved by the Fontana City Council. The approved Mitigation Monitoring program shall comply with all applicable sections of the Fontana Municipal Code.

The Specific Plan Environmental Impact Report (EIR) will serve as the primary environmental clearance document for the SWIP Specific Plan and all future development undertaken within the Specific Plan area. The EIR is considered the primary environmental clearance document for project implementation within the Specific Plan area, including serving as a Project EIR for purposes of infrastructure improvements. Development applications that require discretionary review will be examined in consultation with the EIR to determine if additional environmental

documentation is required. Developments that do not require additional discretionary review will not be subject to additional environmental documentation. However, the project applicant will be required to submit documentation substantiating said development is allowed and in conformance with the Specific Plan, and the potential environmental effects are within the parameters analyzed within the Specific Plan EIR.

Future development projects proposed within the Specific Plan area may be required to prepare their own environmental documentation pursuant to State law. However, subsequent site-specific projects may use the “tiering” concept, as provided by Section 15385 of the CEQA Guidelines. The tiering concept is a process by which the City of Fontana, as the Lead Agency, can adopt a programmatic EIR focusing on the “big picture,” and can then use streamlined CEQA review for subsequent individual development projects in the SWIP Specific Plan area. The streamlined CEQA review may be utilized for each subsequent individual development application so long as the project is consistent with the analysis and findings provided in the EIR, and the City’s General Plan and Municipal Code. This tiering concept allows the City to address the broad environmental issues detailed in the accompanying EIR during the planning stages of the proposed Specific Plan. Future site-specific development projects are evaluated on a project-by-project basis, and may be excused from repeating the broad environmental analysis examined in this comprehensive, programmatic EIR for the entire proposed SWIP Specific Plan area.

## **5.6 Severability**

In the event that any regulation, condition, program, portion, or policy of this Specific Plan or the application thereof to any person or circumstance is held to be invalid or unconstitutional by any court of competent jurisdiction, the provision(s) shall be deemed a separate, distinct, and independent provision and shall not affect the validity of the remaining provisions of this Specific Plan or applications thereof, which can be implemented without the invalid provision or application.

Exhibit 6-15     Street Furniture Palette ..... 6-63

### **6.1 Purpose**

The Freeway Industrial/Commercial District (FID) is intended to encourage a mixture of commercial and light industrial uses. Service commercial activities, such as restaurants, gas stations, and truck stops, will be allowed around the existing/proposed freeway interchanges at Cherry Avenue, Beech Avenue, and Citrus Avenue. The district will also encourage activities that combine industrial and commercial uses, such as businesses that require a mixture of warehouse, showroom, and office spaces. General features of this District include:

- Landscape/Streetscape Enhancement and edge treatments along the I-10 Corridor to create an appealing gateway for the City
- Promotion of lot consolidation
- Activity nodes around improved freeway interchanges
- Establishment of uses that capitalize on regional market potential as well as local demand, such as trucking uses to capitalize on the various truck routes in the area
- Light industrial and service commercial uses that are auto-oriented and pedestrian-sensitive
- Interesting, appropriately-massed facade development that serves as a gateway into Fontana and enhances the I-10 Corridor

## **6.2 Applicability**

### **A. Projects Subject to Development Regulations**

This Chapter contains the Development Regulations that govern all future private development actions in the FID, including new construction, additions or renovations to existing structures and/or new land uses proposed for existing facilities.

### **B. Right of Continued Use**

This Chapter shall not require any change in any existing building or structure for which a building permit has been previously issued or for approved plans on file in the Community Development Department before the effective date of this Specific Plan. Changes in the property's ownership or tenants of legal existing uses shall likewise require no change in any existing building or structure. Nonconforming standards and provisions shall be governed by Section 6.11 Entitlement Procedures.

### **C. Other Requirements**

This Chapter does not eliminate the need for obtaining any other permits required by the City, or any permit, approval or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.

### **D. Types of Development Regulations**

The Development Regulations are of two types – Standards and Guidelines – as follows:

1. Standards address those aspects of development that are essential to achieve the goals of the Specific Plan. They include specifications for allowable land uses and site development (e.g., building height, setbacks, etc.). Conformance with Standards is mandatory. Standards are indicated by use of the words "shall," "must," or "is / is not permitted."
2. Guidelines provide guidance for new development in terms of aesthetics and design details. They are intended to direct building and site design in a way that results in the desired character for the FID. Whereas conformance with the Standards is mandatory, conformance with the Guidelines is preferred and/or recommended. Provisions that fall into this category are indicated by the use of the words "should," "may" or "are encouraged to." In various cases, the Guidelines provide a choice of treatments that will achieve the desired effect. Developers are permitted to propose alternative design details if they are able to show that such details implement the Specific Plan objectives with respect to the desired character of the FID.

### **E. Minimum Requirements**

The provisions in this Chapter shall be minimum requirements. When this Chapter provides for discretionary authority on the part of the Director of Community Development, Planning Commission, or City Council, that discretion may be exercised to impose more stringent requirements if deemed necessary to accomplish the objectives of the FID.

### **F. Overview of Development Regulations**

1. Relationship of Land Use Districts. The Development Regulations in this Chapter are applied to those properties that are within the FID. Exhibit 6-1 – Land Use Plan indicates the location of the FID and its relationship to the other land use districts in the Specific Plan area.
2. Standards, Guidelines, and Procedures. The Development Regulations are divided into the following sections: 6.3 Allowable Land Uses and Permit Requirements; 6.4 Development Standards; 6.5 Landscape Standards; 6.6 Parking and Loading Standards; 6.7 Sign Standards; 6.8 Public Right-of-Way Streetscape; 6.9 Design Guidelines, 6.10 Development Incentives, and 6.11 Entitlement Procedures. Projects must meet all development standards in order to achieve approval in the development review process. Projects are encouraged to adhere to the guidelines contained in 6.9 Design Guidelines.
3. Steps for Using Chapter. Table 6-1 – Process Procedures illustrates the steps for using this Chapter.

| Table 6-1 – Process Procedures                                                                                              |                                                        |                                      |
|-----------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|--------------------------------------|
| <i>Instructions</i>                                                                                                         | <i>Information Source</i>                              | <i>Where to Find in this Chapter</i> |
| Locate property and its street frontage                                                                                     | Land Use Plan                                          | Exhibit 6-1                          |
| Identify the allowable uses and refer to the definitions of the uses                                                        | Allowable Land Uses & Permit Requirements              | Table 6-2                            |
|                                                                                                                             | Definitions                                            | Appendix A                           |
| Comply with the requirements for intensity, lot dimensions, height limits, and setbacks                                     | Intensity and Dimensional Standards                    | Table 6-3                            |
| Comply with fence, wall, and screening standards                                                                            | Fence, Wall, and Screening Standards                   | Table 6-4                            |
| Comply with landscaping requirements                                                                                        | Landscape Standards<br>Public Right-of-Way Streetscape | Section 6.5<br>Section 6.8           |
| Comply with parking requirements                                                                                            | Parking and Loading Standards                          | Section 6.6                          |
| Comply with sign requirements                                                                                               | Sign Standards                                         | Section 6.7                          |
| Review the design guidelines for preferred site layout, building orientation and architectural detail, fencing, and parking | Design Guidelines                                      | Section 6.9                          |
| Determine if development is eligible for incentives                                                                         | Development Incentives                                 | Section 6.10                         |
| Submit project application and proceed through project approval process                                                     | Entitlement Procedures                                 | Section 6.11                         |

# Southwest Industrial Park Specific Plan

Freeway Industrial/Commercial District

Exhibit 6-1 – Land Use Plan

### **6.3 Allowable Land Uses and Permit Requirements**

This Section identifies allowable land uses and their permit requirements.

#### **A. Allowed Uses**

Table 6-2 – Allowable Land Uses and Permit Requirements identifies the types of land uses allowed in the FID and the use permit required to establish each use.

#### **B. Uses Not Listed**

Uses not listed in Table 6-2 are prohibited land uses, until and unless the Director of Community Development makes a similar use determination in compliance with Subsection 6.11.C Entitlement Procedures – Similar Use Determination.

#### **C. Other Applicable Regulations**

The provisions contained in this SWIP Specific Plan constitute the primary land use and development standards for the Specific Plan area. These regulations are in addition to the provisions in the City of Fontana Municipal Code.

This Specific Plan provides all development standards and guidelines necessary to approve subsequent project applications, unless otherwise noted. Permit processing procedures (e.g., noticing, hearing, appeals, and expiration procedures) and enforcement procedures are provided in Municipal Code Chapter 30 (Zoning and Development Code) shall apply, unless otherwise noted. Where there is a conflict between the provisions in this Specific Plan and those in the Zoning and Development Code, the Specific Plan provisions shall prevail to the extent allowable under Federal or State law. Where there is no conflict, both shall be applied concurrently.

#### **D. Definitions**

Definitions for land uses are provided in Appendix A Definitions. If a definition is not provided, the definitions in the Municipal Code shall apply. The Director of Community Development shall interpret the definitions; make a similar use determination in compliance with Subsection 6.11.C Entitlement Procedures – Similar Use Determination; and/or refer any questions to the Planning Commission for its determination. For the purposes of this Specific Plan, the following definitions shall apply:

1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
2. Industrial Use: Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

**Table 6-2 – Allowable Land Uses and Permit Requirements**

| Land Use                                                        | Permit Requirement                                               |  |

(1) Motels are only permitted at Truck Stop locations

(2) See Section 6.4D

(3) See Section 6.9E

(4) See Section 6.9F

## 6.4 Development Standards

New land uses and structures and alterations to existing land uses and structures in the FID shall be designed, constructed, and established in compliance with the requirements in this Section.

### A. Intensity and Dimensional Standards

Table 6-3 Intensity and Dimensional Standards provides the required intensity and dimensional standards for proposed development. The Director of Community Development is authorized to approve modifications of 10 percent or less of any land use district setback, lot width, lot depth, building coverage, building height, or wall height standard in compliance with the administrative variance procedures in Municipal Code Section 30-51.6 (Findings necessary for granting a variance). See Exhibit 6-2 – Dimensional Standards.

#### Municipal Code Section 30-51.6 : Findings necessary for granting a variance

The Director of Community Development may grant an administrative variance from the requirements of this chapter where practical difficulties, unnecessary hardships, or results contrary to the intent of this chapter would occur from the strict and literal interpretation and enforcement of the Code. An administrative variance may be granted upon conditions which will ensure the protection of the public safety, health and welfare. To grant an administrative variance, the Director of Community Development must find from the facts presented that the following conditions exist.

1. That because of circumstances applicable to the property including size, shape, topography, location or surroundings, the strict application of this chapter will deprive the property of privileges enjoyed by other property in the vicinity and under identical zoning classification;
2. That the granting of such an administrative variance will be subject to conditions assuring that the variance shall not constitute a grant of special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district in which the property is located;
3. That the administrative variance does not authorize a use or activity which is not a specifically allowed use in the zoning district in which the property is located; and
4. That the granting of one administrative variance will not be contrary to the general plan.

**Table 6-3 – Intensity and Dimensional Standards**

| Lot Size and Building Placement |                   |                  |
|---------------------------------|-------------------|------------------|
|                                 | Industrial Use    | Commercial Use   |
| <b>INTENSITY</b>                |                   |                  |
| Floor Area Ratio (3)            | 1.0 max. FAR      | 1.0 max. FAR     |
| <b>LOT DIMENSIONS</b>           |                   |                  |
| Lot Size                        | 35,000 sq ft min. | 20,000 sq ft min |
| Lot Width (C)                   |                   |                  |
| Lots abutting railroad/freeway  | 200 ft min.       | 150 ft min.      |

| Within freeway setback area                                                                                         | Tubular or wrought iron fencing with pilasters                                                                                                                 | 8 ft tall pilasters at 30 ft on center with 8 ft tall tubular or wrought iron fencing between pilasters   |
| Outside of a required setback area                                                                                  | Solid or open fencing/wall                                                                                                                                     | No height limit                                                                                           |
| At intersections of alleys, streets, and driveways                                                                  | Solid or open fencing/wall                                                                                                                                     | 30 inches                                                                                                 |
| Within I-10 Freeway setback area                                                                                    | See Section 6.5.C. (Freeway Edge Design Criteria)                                                                                                              |                                                                                                           |
| Within Railroad setback area                                                                                        | Open fencing/wall                                                                                                                                              | 8 ft                                                                                                      |
| Note: (1) All fences and walls shall meet the City's line of sight regulations, as determined by the City Engineer. |                                                                                                                                                                |                                                                                                           |

### 2. Materials

- a. Open fencing shall mean fencing with over 50 percent of the surface area open for free passage of light and air and through which the area behind the fence is visible to public view. See Exhibit 6-3 – Open and Solid Fencing.
- b. Solid fencing shall mean fencing with 50 percent or less of the surface area open for free passage of light and air and designed to conceal the area behind the fence from public view. See Exhibit 6-3 – Open and Solid Fencing.
- c. Barbed wire fences, electric fences, or similar fencing material is prohibited.
- d. Chain link fencing is allowed on interior property lines that are not visible from public rights-of-way.

*Examples of Solid Fencing*

Exhibit 6-3 – Open and Solid Fencing.

3. Screening and Buffering

- a. Roof-mounted and ground-mounted mechanical equipment, utilities, storage, and solid waste storage areas shall be screened from adjoining properties and public right-of-ways by a visual barrier (e.g., wall, fence, landscape material, etc.) to the satisfaction of the Director of Community Development. Where only landscaping is used for screening, it shall be planted with five-gallon (minimum size) shrubs spaced to provide a continuous dense screen.
- b. Parking lot perimeters shall be screened and planted in compliance with Section 6.6 Parking and Loading Standards.

**C. Outdoor Activities and Storage**

1. Storage in Setback Areas. Material or equipment shall not be stored anywhere in the front yard. Temporary storage of construction materials during construction on the same site is permitted. Boats, campers, motor vehicles, trailers, equipment, materials, or antenna may be stored in side and rear yards, provided that they are outside the required side and rear setback areas identified in Table 6-3 Intensity and Dimensional Standards.
2. Limitations on Outdoor Uses
  - a. All uses shall be conducted entirely within a completely enclosed building that is attached to a permanent foundation, except approved outdoor dining areas, vehicle sales and rental businesses, parking areas, nursery growing areas, industrial activities, and other approved uses that require outdoor activities.
  - b. Areas used for the approved outdoor storage of vehicles, equipment and/or building materials (raw or finished) may use compacted slag, gravel, or other similar material deemed suitable by the Director of Community Development.
3. Outdoor Wholesaling. Outdoor wholesaling of goods and materials shall comply with the following:
  - a. A building shall be provided on the same parcel or on an adjacent parcel associated with the same business.
  - b. All display materials, including vehicles, shall be set back five feet from any landscaped area and shall not be located on required parking areas.
  - c. The entire area used for display purposes shall be surfaced with asphalt or an equally serviceable hard pavement surface. The surface shall be maintained in good condition.
  - d. Storage of equipment or materials, with the exception of the display of vehicles for sale or rent, shall be screened by a visually solid masonry wall of minimum height six feet. The approving authority may determine through the design review process that the subject use requires a solid masonry wall higher than six feet.
  - e. Outdoor display areas shall be maintained in a neat and orderly condition.

***D. Caretaker Housing***

Caretaker housing shall be:

1. Accessory to a principal use;
2. A maximum of 1,500 square feet total floor area unless otherwise approved by the planning commission;
3. Limited to one unit per lot; and
4. Subject to the setback requirements applicable to the principal structure with which it is associated.

***E. Solar Access***

A structure, fence, or wall shall not be constructed or modified, and vegetation shall not be placed or allowed to grow so as to obstruct more than 10 percent of the absorption area of a solar energy system on an abutting or adjacent lot at any time.

***F. Undergrounding of Utilities***

1. Utility service laterals to new development shall be installed underground.
2. Temporary overhead power and telephone facilities are permitted only during construction.
3. Placement, location and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.
4. Transformer enclosures shall be designed of durable materials with finishes and colors used that are compatible and harmonious with the overall architectural theme.
5. All utilities including, but not limited to drainage systems, sewers, gas lines, water lines, and electrical, telephone, and communications wires and equipment shall be installed and maintained underground. Placement, location, and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission before any administrative or discretionary approval.

## 6.5 Landscape Standards

### A. Required Landscaping

This section provides the required minimum standards for all landscaped areas within any new and rehabilitated private and public development project.

1. Landscaped area means the entire parcel less the building footprint, driveways, non-irrigated portions of parking lots, and hardscapes (e.g., driveways, approaches, sidewalks, etc.). Decorative hardscapes used to enhance the landscape will be considered as part of the landscape area; this would include cobble rock, decomposed granite, brickwork, stamped concrete, gravel, pavers, and water features.
2. Landscape setbacks along public right-of-ways within commercial and industrial areas shall incorporate landscape buffers with undulating and variable height earth mounding (berms), and/or low walls, and required plant materials as shown in Table 6-5 Landscape Standards.
3. Block wall and wrought iron fencing shall be located behind landscape setback area(s).
4. The developer shall submit to the City's Department of Engineering, a Landscape Documentation Package that conforms to the Water Efficient Landscape Ordinance in Municipal Code Chapter 28 Vegetation.
5. All new development landscaping shall comply with the standards shown in Table 6-5 – Landscape Standards. Additional guidelines that should be considered are provided in Section 6.9 Design Guidelines.
6. The Recommended Plant Materials Palette, Table 6-6, can be found immediately after this section. The plant materials palette is provided to ensure the installation of drought-tolerant, water-efficient landscaping that will provide wind breaks and thrive in the local climate conditions. In an effort to provide visual elements that distinguish this district from others, turf (grass) does not appear in the Plant Materials Palette and shall be prohibited, in lieu of drought-tolerant ground covers.
7. Public right-of-way improvements, including street improvements, streetscape/landscape (parkway) improvements, and street tree requirements, are in Section 6.8 Public Right-of-Way Streetscape.

**Table 6-5 – Landscape Standards**

*Note: The Director of Community Development may require additional setbacks.*

|                                                                                                      |                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Minimum Landscaped Area<br>Mixture of ground cover, shrubs, trees, and decorative hardscape features | 15% of total site area, not including areas covered by buildings, structures, or areas used for approved outside storage, loading, or other activities.<br>25% of total site area, for hotels, not including areas covered by buildings, or areas used for approved outside storage, loading, or other activities. |
| Decorative hardscape features<br>Brick, stone, art, fountains, ponds, etc.                           | Maximum 15 % of the total required landscaping of site area                                                                                                                                                                                                                                                        |
| Minimum plant sizes in landscaped areas                                                              | Minimum Ratio 1 tree/500 SF of landscape area                                                                                                                                                                                                                                                                      |

| Shrubs                                                                                               | 50% - 5-gallon<br>50% - 1-gallon                                                                                                                                                                                                                                                                                   |
| Groundcover                                                                                          | 12-inch maximum on center spacing that will cover area within one year of initial planting                                                                                                                                                                                                                         |
| Street trees in parkways per Master Plan of Parkway Trees                                            | 1 tree of not less than 24-inch box size for each 30 linear feet of street frontage<br>In parkways of inadequate width, street trees shall be planted in abutting setback/yard, in addition to the required buffer landscaping in setback area                                                                     |
| Landscape buffer in front setback area                                                               | 1 tree for each 20 linear feet minimum of street frontage and three 5-gallon shrubs for each tree<br>Undulating earth berms with informal tree and shrub massing and/or low decorative walls may be utilized.<br>Maximum slope: 3:1 for berms                                                                      |
| Additional landscape requirements                                                                    | 1 tree for each 800 square feet minimum of other required landscaped area and 8 shrubs for each tree.                                                                                                                                                                                                              |
| Landscape Buffer in front setback requirements from right-of-way                                     | Major Highways:<br>Cherry Ave, Citrus Ave, and Valley Blvd:<br>30 ft minimum width<br>Primary Highway:<br>Mulberry, Beech, Slover and Fontana Avenues:<br>25 ft minimum width<br>Secondary Highways and Collector/Local Streets:<br>Poplar Ave: 20 ft minimum width                                                |

**B. Recommended Plant Materials Palette**

Table 6-6 – Recommended Plant Materials Palette provides a listing of primarily drought-tolerant trees, shrubs, and ground covers to provide water-efficient landscaping in new projects. The limited selection of landscape material in the palette is envisioned to assist the user in incorporating sustainable landscaping into the project, while including enough variety of size, form, and density, to meet the requirements within buffer setbacks and screening techniques. Final selection shall be approved the City. The Director of Community Development shall approve artificial turf.

| Table 6-6 (a) – Recommended Plant Materials Palette<br>Recommended Trees            |                                                     |                                                                                      |                                                   |

## 6.6 *Parking and Loading Standards*

### **A. *Applicability***

This section contains regulations for off-street parking and loading. Regulations identify required number of parking and loading spaces for all new development projects and those proposing substantial modification to existing buildings. Please refer to Municipal Code Chapter 30 Zoning and Development Code for all parking and loading-related information or regulations not specifically addressed in this section.

### **B. *General Parking and Loading Regulations***

1. Methods of Calculation.
  - a. Multiple Uses. If more than one use is located on a site, the total number of required off-street parking and loading spaces shall be the sum of the requirements for the various uses computed separately. If individual uses on the same site have a floor area less than that for which loading spaces would be required, then the total gross floor area of all uses on the site or lot shall be used in determining the required number of loading spaces.
  - b. Fractional Number. Whenever the computation of the required number of off-street parking or loading spaces results in a fractional number, one additional space shall be required for a fraction of more than one-half, but shall not be required for a fraction of one-half or less.
2. Off-Site Location. Required off-street parking spaces shall be located on the same property as the use that they are intended to serve. Where the required parking spaces cannot be accommodated on the same property, they may be located in a separate off-site parking facility that is not more than 300 feet from the use(s) they serve.
3. Shared Use. Required off-street parking and loading spaces shall not be considered as providing parking or loading spaces for any other use, except where shared use facilities are approved in compliance with Subparagraph 5 Adjustments to Parking Requirements, below.
4. Uses Not Specified. For uses not specified, the Director of Community Development shall determine parking requirements based upon the requirements of the most similar use. See Subsection 6.11.C Entitlement Procedures – Similar Use Determination.
5. Adjustments to Parking Requirements.
  - a. Administrative Variance. The Director of Community Development is authorized to approve alternate parking plans involving a modification of 10 percent or less of any of the off-street parking and loading standards in compliance with Section 30-51.5 of Municipal Code Chapter 30.

- b. **Parking Study Option.** An applicant may submit a separate parking and loading study for new development to the Director of Community Development for review. A parking and loading study shall provide sufficient data and information to justify the need for adjustments to the parking and loading requirements and shall analyze whether:
  - i. Adequate off-street parking will be provided for the project;
  - ii. The project demonstrates the use of creative design concepts, including but not limited to shared parking facilities, transit accessibility, pedestrian amenities, and bicycle amenities;
  - iii. Environmental impacts associated with the project will not be increased by the modification of standards; and
  - iv. Traffic safety and pedestrian safety will be enhanced by the modifications.
- c. **Shared Use Facility.** Required off-street parking and loading spaces may be considered as providing parking or loading spaces for another use where joint facilities serving more than one use contain no less than the total number of spaces deemed necessary for each individual use added together with other uses. Where adjoining uses on the same site have different hours of operation with minimal conflict, the Director of Community Development may determine that some or all of the same spaces may be counted as satisfying the requirements for both uses, provided that the number of spaces shall not be less than the prescribed for the use requiring the greater number.

### ***C. Required Number of Parking Spaces***

Each land use shall provide the number of off-street parking spaces indicated in Table 6-7 – Parking Requirements by Land Use, except where an adjustment has been granted in compliance with Subparagraph B.5 Adjustments to Parking Requirements, above. For the purposes of this Section, the following definitions shall apply:

- 1. **Commercial Use:** Activity involving the sale of goods or services carried out for profit.
- 2. **Industrial Use:** Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

## Southwest Industrial Park Specific Plan

Freeway Industrial/Commercial District

**D. Required Number of Loading Spaces**

Each land use shall provide the number of off-street loading spaces indicated in Table 6-8 – Loading Space Requirements by Land Use. Requirements for uses not specifically listed shall be determined by the Director of Community Development based upon the requirements for comparable uses and upon the particular characteristics of the proposed use. For other standards (e.g., size of loading spaces, location, turning radius, etc.), refer to Article XI Off-Street Parking and Loading Standards, Division 4 Loading Area Regulations, in Municipal Code Chapter 30 Zoning and Development Code.

### E. Landscaping Standards for Parking Areas

Within any parking area, one tree shall be planted for every five single-row parking stalls or 10 double-row parking stalls. Eighty percent of these shall be 15 gallons in size and the remaining 20 percent shall be 24-inch box or larger in size. If for some reason the contractor is unable to distribute trees in the interior of the parking area in compliance with these standards, the Director of Community Development may approve the placement of no more than 40 percent of the trees within the perimeter of the parking area. Planters shall not have a dimension less than four feet, excluding the thickness of the curbing. These requirements may be reduced for industrial parking areas that are screened from public view.

1. Parking areas shall contain a minimum landscape area equivalent to 30 percent of the total required 15 percent landscaping for the total site area.
2. Parking area perimeter landscaping.
  - a. Parking areas for nonresidential uses abutting or adjacent to residentially zoned property shall provide a landscape strip that is a minimum of 10 feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line bordering the residentially zoned property. Parking areas shall be screened from the residentially zoned property by a solid decorative masonry wall that is a minimum of six feet in height.

- b. Parking areas for nonresidential uses abutting or adjacent to non-residentially zoned property or a street shall install a landscape strip that is a minimum of five feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line, or the parking area and the street right-of-way. This requirement may be reduced or modified if a joint access agreement exists that is satisfactory to the Director of Community Development. Parking areas shall be screened from streets through combinations of plant materials, earth berms, raised planters, grade separations, or low walls not more than 42 inches in height. Slopes shall not exceed three to one or exceed 36 inches in height measured from the parking lot surface.
  - c. Plant materials, walls, or structures within a traffic sight area shall not block sight lines from driveways to streets and shall not exceed 36 inches in height.
  - d. The minimum width of a landscape finger shall be five (5) feet.
  - e. End of aisle spaces adjacent to landscape finger shall be two feet wider for step out area.
3. Parking area interior landscaping.
- a. Tree number and location. One tree shall be provided for each four parking spaces and shall be evenly spaced throughout the interior parking area at a rate of one tree for every eight parking spaces. The required number of trees in the interior area shall not include trees required around the parking area perimeter. Trees are not required for tractor-trailer parking areas. A minimum of one cluster of trees shall be provided for each 100 feet of a row or double row of parking spaces. Trees shall be located in planters that are bounded on at least two sides by parking area paving. Planters shall have a minimum exterior dimension of five feet.

Exhibit 6-4 – Parking Lot Landscaping

- b. Tree size. All trees within the parking area shall be a minimum 24-inch box container at time of planting.
- c. Landscape protection. Landscaping shall be protected by concrete curbs of at least six inches in height. An end-of-aisle planter shall be provided at the ends of all parking aisles. Finger aisle planters shall be a minimum of nine feet wide and end-

of-aisle planters shall be a minimum of seven feet wide, as measured from the inside of the curb. The parking space side of finger and end-of-aisle planters shall have a 24-inch wide concrete surface measured from the face of the curb. Planters shall be landscaped with a mixture of trees, shrubs, and ground cover. Planting areas shall have round corners instead of 90 degree corners and shall be shaped to allow vehicle movements. The Director of Community Development may approve alternative barriers designed to protect landscaped areas from vehicle damage. Wheel stops may be placed to allow for two feet of vehicle overhang area within the dimension of the parking space. To increase the parking lot landscaped area, a maximum of two feet of the parking stall depth may be landscaped with low-growth, hardy materials in-lieu of paving, allowing a bumper overhang while maintaining the required parking dimensions. However, the overhang area shall not be counted as part of the minimum landscape area required by paragraph (1) above, and when adjacent to a required landscaping strip shall be in addition to the minimum required width. Fixtures (e.g., lights, sprinklers) that are higher than the curb are prohibited within a bumper overhang area. Curbing that creates a bumper overhang barrier shall not exceed a height of five inches.

- d. Parking areas with more than 100 spaces shall provide an appropriate entry feature consisting of a concentration of landscape elements, including trees, flowering plants, enhanced paving, and project identification.
4. Parking structures. A landscaping strip 10 feet wide shall be provided on all sides of a parking structure. One tree shall be provided for each 20 to 40 feet of perimeter of the structure, based on species selected. These trees shall be distributed evenly throughout the subject landscape area.

## 6.7 Sign Standards

### A. Applicability

This section contains standards and guidelines for signage to ensure that signs are consistent with the overall quality and character of anticipated new development. Regulations identify permitted sign types; provide standards for number of signs, size, and location; and provide design guidelines for color, materials, and illumination. Refer to the Fontana Municipal Code for all sign-related information or regulations not specifically addressed in this section.

### B. Standards and Guidelines

1. Standards. The following standards shall apply to all signs, regardless of type:
  - a. Sign types not listed in this Section are not permitted.
  - b. Linear Frontage Ratio. For each establishment, one and one-half (1 ½) square feet of total sign area shall be allowed for each linear foot of building frontage ("Linear Frontage Ratio"). Unless otherwise noted, all signs (including temporary signs) shall count toward the total sign area permitted based on the Linear Frontage Ratio. For multi-tenant buildings, each establishment shall be calculated individually. For corner establishments, each facade shall be calculated individually. Permitted sign area based on the linear frontage of one establishment or facade shall not be placed on another establishment or facade.
  - c. Signs shall not be animated.
  - d. Commercial messages that identify, advertise, or attract attention to a business, product, service, or event or activity sold, existing, or offered elsewhere than upon the same property where the sign is displayed are expressly prohibited.
  - e. In the event of a conflict between this Section and any other City regulation, the provisions of this Section shall apply.
  - f. All issues not specifically addressed herein (e.g., signage in the public right-of-way, exempt signs, permit processing, etc.) shall be addressed pursuant to the Fontana Municipal Code.
2. Guidelines. The following guidelines shall apply to all signs, regardless of type.
  - a. Design compatibility.
    - Provide signage that is compatible with the building architecture and coordinate sign materials and colors with the building facade/storefront design.
    - Place signs in accordance with facade rhythm, scale, and proportion.
    - Ensure that signs associated with multi-tenant buildings are complementary to one another. A consistent location for tenant identification signs is recommended.

b. Location.

- Signs shall be placed at or near the public entrance to a building or main parking area to indicate the most direct access to the business.
- Signs shall not be located so that they cover or interrupt the architectural details or ornamentation of a building's facade.
- Signs shall not project above the edge of the rooflines and shall not obstruct windows and/or doorways.

c. Sign legibility.

- Avoid hard-to-read, intricate typefaces. Typefaces that are difficult to read reduce the sign's ability to communicate.
- Avoid spacing letters and words too close together. Lettering shall not occupy more than 75 percent of the sign face.
- Limit the number of lettering styles in order to increase legibility. Signs shall be limited to no more than two styles for small signs (generally up to 10 square feet) and three styles for larger signs.
- Use significant contrast through incorporating light colored letters and a darker, contrasting background to provide the most visible and best-looking image.
- Incorporate business identity symbols and logos.
- Logo means any symbol or any combination thereof adopted and used by an individual or corporation to identify goods made or sold or services rendered by an individual or corporation and to distinguish them from goods made or sold or services rendered by others and that is nationally or State of California registered.

d. Color and materials.

- Bright day-glo (fluorescent) colors shall be avoided as they are distracting and do not blend well with other background colors.
- Sign colors shall relate to and complement the materials or color scheme of the buildings, including accent and trim colors.
- Sign materials shall be selected with consideration for the architectural design of the building's façade and also contribute to the legibility of the sign.
- Construct signs of durable, high-quality materials.
- Wood, paper and cloth signs, and painted wall signs are prohibited.

e. Illumination.

- Individually illuminated letters, either internally illuminated or back-lighted solid letters (reverse channel), are a preferred alternative to internally illuminated plastic-faced cabinet signs.
- Signs shall be comprised of individual letters.
- The use of backlit, individually cut letter signs is strongly encouraged for all types of business and signs, including monument-type signs.
- Whenever indirect lighting fixtures are used, care shall be taken to properly shield the light source.

- f. Electrical raceways and conduits.
- Electrical transformer boxes and raceways shall be concealed from public view.
  - All exposed conduit and junction boxes shall be appropriately concealed from public view.

### C. Sign Types

For the purposes of this plan, Table 6-9 – Sign Types indicates the signs that are allowed in the Freeway Industrial/Commercial District.

| Table 6-9 – Sign Types |                                                                                                                   |
|------------------------|-------------------------------------------------------------------------------------------------------------------|
| 1                      | <b>Grand Wall Sign</b><br>Non-residential uses with unfenestrated wall areas of 2,000 square feet or greater      |
| 2                      | <b>Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                                   |
| 3                      | <b>Projecting Sign</b><br>Non-residential uses with a dedicated ground floor entrance                             |
| 4                      | <b>Awning Valance Sign</b><br>Non-residential uses with a dedicated ground floor entrance                         |
| 5                      | <b>Awning Side Sign</b><br>Non-residential uses with a dedicated ground floor entrance                            |
| 6                      | <b>Canopy Fascia Sign</b><br>Non-residential uses with a dedicated ground floor entrance                          |
| 7                      | <b>Under-Awning and Under-Canopy Sign</b><br>Non-residential uses with a dedicated ground floor entrance          |
| 8                      | <b>Recessed Entry Sign</b><br>Non-residential uses with a dedicated ground floor entrance                         |
| 9                      | <b>Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                                 |
| 10                     | <b>Temporary Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                       |
| 11                     | <b>Temporary Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                         |
| 12                     | <b>Monument Sign</b><br>Any building with continuous linear street frontage of 200 feet or greater                |
| 13                     | <b>Pylon Sign</b><br>Any building with continuous linear street frontage of 200 feet or greater                   |
| 14                     | <b>Freeway Identification Sign</b><br>Any building with continuous linear freeway frontage of 200 feet or greater |
| 15                     | <b>Directional Sign</b><br>Each vehicle entrance                                                                  |
| 16                     | <b>Accessory Sign</b><br>Specific identified uses                                                                 |

## **D. Sign Type Standards and Guidelines**

This section provides Standards and Guidelines for each Sign Type.

### **1. Grand Wall Sign**

Grand Wall Signs are large signs located on, and parallel to, large unfenestrated building wall areas.

#### **a. Standards**

- i. A Grand Wall Sign shall only be located on unfenestrated wall areas of 2,000 square feet in size or greater.
- ii. Only one (1) Grand Wall Sign shall be permitted per establishment.
- iii. The Grand Wall Sign area shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. A Grand Wall Sign shall not exceed 1,000 square feet or 25 percent of the total wall area, whichever is less.
- v. A Grand Wall Sign shall project no more than one (1) foot from the façade of the building.

#### **b. Commercial Guidelines**

- i. Materials used in Grand Wall Signs shall be wood, ceramic, metal, or paint only.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

#### **c. Industrial Guidelines**

- i. Materials used in Grand Wall Signs shall be ceramic or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

### **2. Wall Sign**

Wall Signs are signs that located on, and parallel to, a building wall. Business Identification Wall Signs are signs that announce the name of a business within a building and Building Identification Wall Signs are signs that announce the name of a building. Both are located on, and parallel to, a building wall.

1) Grand Wall Sign.

a. Standards

- i. Wall Signs shall be located below the second floor and within the middle 50 percent of the building or tenant frontage measured from lease line to lease line. Building Identification Wall Signs shall be located only on the frieze or fascia (articulated banding across the top of every building floor) area of storefront level; frieze or fascia, parapet of the uppermost floor; or above the entrance to main building lobby.
- ii. No Wall Sign shall exceed 150 square feet in size. Building Identification Wall Signs shall be no taller than 24 inches in height.
- iii. Wall Signs shall count towards the total sign area permitted based on the Linear Frontage Ratio, except that the area of Building Identification Wall Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. Wall Signs shall project no more than one (1) foot from the façade of the building.

2) Building Identification Wall Sign.

b. Commercial Guidelines

- i. Materials used in wall signs shall be wood, ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. New wall signs for individual businesses in a shopping center shall be placed consistent with the location of signs for other businesses in the center. This will establish visual continuity among storefronts and create a unified appearance for the center.
- v. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

2) Business Identification Wall Sign.

c. Industrial Guidelines

- i. Materials used in wall signs shall be ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall signs shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only. Building Identification Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

3. **Projecting Sign**

Projecting Signs are signs that are oriented perpendicularly to the building façade and are either (1) suspended under a bracket, armature, or other mounting device or (2) are cantilevered (i.e., structurally affixed to the building).

a. Standards

- i. Projecting Signs shall only be mounted on the wall area below the second floor.
- ii. No Projecting Sign shall exceed 16 square feet in size.
- iii. Projecting Signs shall project no more than four feet from the façade of the building.
- iv. No portion of a Projecting Sign shall be lower than eight feet above the level of the walkway over which it projects.

b. Commercial and Industrial Guidelines

- i. Projecting Signs that are suspended under a bracket, armature, or other mounting device shall be metal and paint materials only and shall be illuminated by external illumination only.

3) Suspended Projecting Sign.

3) Cantilevered Projecting.

- ii. Projecting Signs that are cantilevered signs shall be metal and paint only and shall be illuminated by external illumination or halo illumination only.
- iii. Sign supports and brackets shall be compatible with the design and scale of the sign and the architectural design of the building.

#### 4. ***Awning Valance Sign***

Awning Valance Signs are signs applied to the awning valance and are contained completely within the valance.

##### a. Standards

- i. Lettering for Awning Valance Signs shall include one (1) line of lettering not to exceed two-thirds (2/3) the height of the valance or 12 inches, whichever is less.
- ii. Awning Valance Signs shall project no farther from the building than its associated awning.
- iii. No portion of an Awning Valance Sign shall be less than eight feet above the level of the walkway over which it projects.

##### b. Commercial and Industrial Guidelines

- i. Awning Valance Signs shall consist of metal, or vinyl or paint applied directly to the awning.
- ii. Awning Valance Signs shall be illuminated by external illumination only.
- iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
- iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
- v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
- vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

4) Awning Valance Sign.

## 5. *Awning Side Sign*

Awning Side Signs are signs applied to the side panel of an awning.

- a. Standards
  - i. The area of Awning Side Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - ii. Lettering for Awning Side Signs shall not exceed 12 inches in height with total sign area not to exceed 20 percent of the area of the awning side area.
  - iii. Awning Side Signs shall project no farther from the building than its associated awning.
  - iv. No portion of an Awning Side Sign shall be less than eight feet above the level of the walkway over which it projects.

5) Awning Side Sign.

- b. Commercial and Industrial Guidelines
  - i. Awning Side Signs shall consist of vinyl or paint applied directly to the awning.
  - ii. Awning Side Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

## 6. *Canopy Fascia Sign*

Canopy Fascia Signs are signs that are mounted to the front or side fascia of a canopy and contained completely within that fascia.

- a. Standards
  - i. The height of Canopy Fascia Signs shall not exceed two-thirds ( $\frac{2}{3}$ ) the height of the fascia or 12 inches, whichever is less.
  - ii. The width of Canopy Fascia Signs shall not exceed two-thirds ( $\frac{2}{3}$ ) of the canopy width.
  - iii. Canopy Fascia Signs shall project no farther from the building than its associated canopy.
  - iv. No portion of a Canopy Fascia Sign shall be less than eight feet above the level of the walkway over which it projects.
  - v. Canopy Fascia Signs shall consist of only one (1) line of lettering articulated as individual letters mounted directly to the canopy.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Canopy Fascia Signs shall be metal and paint only.
  - ii. Canopy Fascia Signs shall be illuminated by external illumination only.

6) Canopy Fascia Sign.

7) Under-Awning Sign.

## 7. *Under-Awning or Under-Canopy Sign*

Under-Awning or Under-Canopy Signs are signs that are suspended under an awning or canopy, perpendicular to the building facade.

- a. Standards
  - i. Under-Awning or Under-Canopy Signs shall be located adjacent to a public entrance.
  - ii. No more than one (1) Under-Awning or Under-Canopy Sign shall be permitted per establishment per façade.
  - iii. The area of Under-Awning or Under-Canopy Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - iv. Under-Awning or Under-Canopy Signs shall not exceed three (3) square feet in area.

7) Under-Canopy Sign.

- v. Under-Awning or Under-Canopy Signs shall project no farther from the building than its associated awning or canopy.
  - vi. No portion of an Under-Awning or Under-Canopy Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial Guidelines
- i. Materials used in Under-Awning or Under-Canopy Signs shall be wood, metal, and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
- i. Materials used in Under-Awning or Under-Canopy Signs shall be metal and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.

**8. Recessed Entry Sign**

Recessed Entry Signs are signs that are oriented parallel to the building façade and that are suspended over a recessed entry.

- a. Standards
- i. No Recessed Entry Sign shall exceed twenty (20) square feet in size.
  - ii. Recessed Entry Signs shall not project beyond the façade of the building.
  - iii. A Recessed Entry Sign shall not be lower than eight feet above the level of the walkway.
- b. Commercial Guidelines
- i. Materials used in Recessed Entry Signs shall be wood, metal, and paint only.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.

8) Recessed Entry Sign-  
Section View.

8) Recessed Entry Sign-  
Elevation View.

c. Industrial Guidelines

- i. Materials used in Recessed Entry Signs shall be metal and paint only.
- ii. Recessed Entry Signs shall be illuminated by external illumination only.

**9. Window Sign**

Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window.

a. Standards

- i. Window Signs shall be permitted on windows below the second floor level only. A Window Sign that only identifies a building shall be located on a transom window above a primary entrance, or the glazed area of primary door.
- ii. Window signs shall count towards total sign area permitted based on the Linear Frontage Ratio, except that the area of a Window Sign that only identifies a building shall not count towards the total sign area permitted based on the Linear Frontage Ratio. One (1) Window Sign that only identifies a building shall be permitted per building per street-facing façade.
- iii. A maximum of 25 percent of any individual window area shall be covered or otherwise occupied by signage.
- iv. The letter height of each Window Sign shall not exceed 12 inches.

b. Commercial and Industrial Guidelines

- i. Ground-floor Window Signs shall consist of vinyl or paint applied to the glass, neon mounted or suspended behind the glass, or framed and mounted paper signs. Window Signs that only identify a building shall consist of vinyl or paint applied to the glass only.
- ii. Ground-floor Window Signs may be illuminated by external illumination only. A Window Sign that only identifies a Building Identification shall not be illuminated.

g) Window Sign – Business Identification.

g) Window Sign – Building Identification.

### 10. Temporary Window Sign

Temporary Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window and are designed, constructed, and intended for display on private property for a period of not more than 90 consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal signage.

- a. Standards
  - i. Temporary Window Signs shall be located only on ground floor windows on building facades that face a public street or a parking lot.
  - ii. Temporary Window Signs shall not exceed six square feet in size.
  - iii. Temporary Window Signs shall not cause the total amount of the window area covered with signage to exceed 25 percent.
  - iv. Temporary Window Signs that satisfy the above standards and General Standards do not require a permit.
- b. Commercial and Industrial Guidelines
  - i. Temporary Window Signs shall be constructed of paint applied directly to the glass or framed paper signs placed behind the glass.
  - ii. Temporary Window Signs shall not be illuminated.
  - iii. Temporary Window Signs that satisfy the above guidelines and General Guidelines do not require a permit.

10) Temporary Window Sign.

### 11. Temporary Wall Sign

Temporary Wall Signs are signs that are located on, and parallel to, a building wall and are designed, constructed, and intended for display on private property for a period of not more than ninety (90) consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal temporary banner signage.

- a. Standards
  - i. Temporary Wall Signs shall only be mounted on a wall area below the second floor level that faces a public street or a parking lot.

11) Temporary Wall Sign.

- ii. A maximum of one (1) Temporary Wall Sign is allowed per establishment.
  - iii. Temporary Wall Signs shall not exceed 32 square feet in area.
  - iv. Temporary Wall Signs shall project no more than one (1) foot from the façade of the building.
- b. Commercial and Industrial Guidelines
- i. Materials used in Temporary Wall Signs shall consist of a flexible vinyl material with grommet holes installed around the edges to accommodate attachment to a building.
  - ii. Temporary Wall Signs shall not be illuminated.

## 12. Monument Sign

A Monument Sign is a freestanding sign supported by a solid architectural element at its base.

- a. Standards
- i. A maximum of one Monument Sign is allowed per street frontage for single-purpose buildings, multi-tenant buildings or complexes and shopping centers on a parcel with one or more street frontages of at least 100 feet.
  - ii. A Monument Sign shall not exceed eight feet in length or six feet in height.
  - iii. Monument Signs shall be placed perpendicular or parallel to the street. The base of a Monument Sign shall be set back a minimum of five feet from any public right-of-way or interior property line; a minimum of 10 feet from the edge of a driveway; and a minimum of 50 feet from any Monument Signs or Pylon Signs on adjoining sites. Monument Signs shall not block sight lines at entry driveways and circulation aisles.
  - iv. The sign copy for a Monument Sign shall only identify the name of the center, complex, or building and the address; however, the name of the primary tenant, if any, may be included in the copy. The minimum letter size allowed shall be six inches. Sign copy shall not be located closer than one half-letter height to the sign edge or other line of copy. Between 5 to 10 percent of the sign area should be dedicated to identification of the street address.
  - v. The area of Monument Signs shall not count towards the total sign area permitted based upon Linear Frontage.

12) Monument Sign.

- vi. Monument Signs shall not project over any on-site driveway or vehicle circulation area.
  - vii. Landscaping with automatic irrigation shall be provided at the base of the supporting structure equal to twice the area of one face of the sign or 75 square feet, whichever is greater. For example, 40 sq. ft. of sign area = 80 sq. ft. of landscaped area.
- b. Commercial and Industrial Guidelines
- i. Monument Signs may be illuminated, however the sign copy should be the only portion of the sign face that is illuminated. The sign background or field shall be opaque with a nonglossy, nonreflective finish.
  - ii. The sign area and height of the sign should be in proportion to the site and surrounding buildings. Signs shall not be overly large so as to be a dominant feature of the site.
  - iii. Monument Signs shall incorporate architectural elements, details, and articulation as follows:
    - Provide a solid architectural base that supports the sign. The base shall be a minimum of one-foot in height.
    - Provide architectural elements on the sides and top to frame the sign pane(s). Use columns, pilasters, cornices, and similar details to provide design interest.
    - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
    - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with its adjacent building(s).

### **13. Pylon Sign**

A Pylon Sign is a freestanding sign that is supported by two or more uprights, or braces in or upon the ground that are not a part of a building or enclosed within the exterior walls of a building and are separated from any other structures by a distance of at least six inches. This includes a sign that is supported by two or more uprights that are surrounded by a decorative cover to form one solid sign support. The following standards and guidelines do not apply to pylon signs oriented

towards the I-10 Freeway. Pylon signs shall only be allowed for commercial properties.

a. Standards

- i. A maximum of one Pylon Sign is allowed per street frontage for single-purpose buildings, multi-tenant buildings or complexes, and shopping centers on a -parcel with one or more street frontages of at least 200 feet. Either a Pylon Sign or a Monument Sign is allowed on a street frontage, but not both.
- ii. A Pylon Sign shall not exceed 20 feet in height.
- iii. Pylon Signs are only allowed when a building is set back from the front property line a minimum of 40 feet. The base of a Pylon Sign shall be set back a minimum of five feet from any public right-of-way or interior property line; a minimum of 10 feet from the edge of a driveway; and a minimum of 50 feet from a property line of any residentially zoned property and from any Monument Signs or Pylon Signs on adjoining sites. Pylon Signs shall not block sight lines at entry driveways and circulation aisles.
- iv. The sign copy for a Pylon Sign shall only identify the name of the center, complex, or building and the address; however, the name of the primary tenant, if any, may be included in the copy. Sign copy shall not be located closer than one half-letter height to the sign edge or other line of copy.
- v. The area of Pylon Signs shall not count towards the total sign area permitted based upon Linear Frontage.
- vi. Pylon Signs shall not project over any building, on-site driveway, or vehicle circulation area.
- vii. Landscaping with automatic irrigation shall be provided at the base of the supporting structure equal to twice the area of one face of the sign or 75 square feet, whichever is greater. For example, 40 sq. ft. of sign area = 80 sq. ft. of landscaped area.

b. Guidelines

- i. Pylon Signs may be illuminated; however the sign copy shall be the only portion of the sign face that is illuminated. The sign background or field shall be opaque with a nonglossy, nonreflective finish.
- ii. The sign area and height of the sign should be in proportion to the site and surrounding buildings. Signs

13) Pylon Sign.

shall not be overly large so as to be a dominant feature of the site.

- iii. Pylon Signs should incorporate architectural elements, details, and articulation as follows:
  - The supporting structures of Pylon Signs shall not include exposed metal pole(s), but shall be surrounded by a decorative cover that is architecturally compatible with the sign cabinet and the architectural character of buildings on the site.
  - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
  - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with adjacent building(s).

#### **14. Freeway Adjacent Sign**

A Freeway Adjacent Sign is an on-site sign of a pylon-type design that is oriented towards traffic traveling on the I-10 freeway.

- a. Standards
  - i. One Freeway Adjacent Sign is allowed for single-purpose buildings, multi-tenant buildings, or complexes with at least 20,000 square feet of building area on a parcel that has at least 200 linear feet of continuous frontage along the I-10 freeway easement or right-of-way and is at least four net acres in size. A parcel with a Freeway Adjacent Sign shall not be permitted any other freestanding sign of any type.
  - ii. Freeway Identification Signs shall not exceed 200 square feet in area and a maximum height of 40 feet. If additional sign height and/or area is requested, the Planning Commission, at the Planning Commission's discretion, may approve additional sign height and/or area (up to a maximum height of 50 feet and maximum sign area of 250 square feet) after either or both of the following modeling simulations is conducted by the applicant as a part of the Design Review:
    - A "flag test" to simulate the visual impact of the proposed sign structure;

14) Freeway Adjacent Sign.

- A line of sight study to determine what size of sign could be seen from any given distance, and whether the additional height and/or area are warranted.
- b. Commercial and Industrial Guidelines
    - i. Freestanding freeway-oriented signs shall be of a pylon-type design, supported by two or more appropriately dimensioned columns. Pole signs are not allowed.
    - ii. Signs should incorporate architectural design elements into the sign copy portion of the sign as well as the supporting structure. The overall design theme shall be compatible with the associated development.
    - iii. Materials and colors used on the sign and supporting structure shall be compatible with those of the development the sign serves.
    - iv. Signs shall be internally illuminated, however, the sign copy shall be the only portion of the sign face that is illuminated.
    - v. Signs shall incorporate a significant landscaped area at the base of the sign equal to two times the size of the sign face.

#### 15. *Directional Sign*

A Directional Sign is an on-premise sign giving directions, instructions, or facility information of an establishment (e.g., parking signs, exit and entrance signs, etc.).

- a. Standards
  - i. One (1) directional sign for each vehicle entry to a site with a maximum area of three square feet per sign. Maximum sign height shall be four feet. Additional directional signs may be allowed with approval of a Comprehensive Sign Program.
- b. Commercial and Industrial Guidelines
  - i. Directional signs and their supports shall use the same color palette of the proposed building.
  - ii. Directional signs shall be located to maintain sight lines along major circulation routes and shall be illuminated for visual clarity and safety.
  - iii. Directional signs shall be designed with easy-to-read fonts, contrasting colors from the surrounding support panels, and durable materials.

15) Directional Sign.

- iv. Double-sided parking directional signs shall incorporate messaging and direction arrows on both sides of sign.
- v. Parking directional signage shall be used consistently throughout each individual development.

### 16. Accessory Signs

Accessory Signs are signs that provide incidental information about a project site or a business and its goods or services. For the purposes of this plan, Accessory Signs include:

- Directory Sign. A sign listing the tenants or occupants of a building or building complex.
- Fuel Price Sign. Fuel price signs only advertise the price and grade of fuel for sale at a service station.
- Nameplate Sign. A sign indicating the name and/or address of a building or occupant.
- Restaurant Menu Sign. Menus displayed on the exterior premises of a restaurant.

16) Accessory Sign.

- a. Standards
  - i. The area of Accessory Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - ii. Directory Signs: Limited to a total sign area of 10 square feet.
  - iii. Fuel Price Signs: One per street frontage with a maximum sign area of 12 square feet and a maximum height of four feet. Fuel price signs shall only advertise the price and grade of fuel and no other advertising shall be allowed. Located in a landscaped planter with a minimum area equal to the area of the sign.
  - iv. Nameplate Sign: One non-illuminated sign not to exceed one square foot in area.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Accessory Signs shall be wood and metal.
  - ii. Accessory Signs shall be illuminated by internal or external illumination as appropriate.

## 6.8 Public Right-of-Way Streetscape

This section establishes standards for streetscape landscaping improvements within the public rights-of-way along the major highways, primary highways, and secondary highways as identified in the General Plan, Circulation Master Plan, as well as district gateway/intersection enhancements. The intent of these streetscape improvement concepts, and gateway enhancements is to provide a “sense of place” or identity, while interweaving the standards and tree palettes that may be provided by any overriding Master Street Tree Plan.

### A. Street Classifications

Streets within the FID are classified as follows:

1. Major highways:
  - a. Six-lane major highway – Citrus Avenue.
  - b. Modified six-lane no median major highway – Valley Boulevard.
  - c. Eight-lane major highway – Cherry Avenue.
2. Primary highways – Beech Avenue, Fontana Avenue, Mulberry Avenue, and Slover Avenue.
3. Secondary highway – Poplar Avenue.

### B. General Design Criteria

The following general design criteria are intended to articulate consistent landscape treatments on similar classifications of corridors and provide a hierarchy of conceptual treatments for district gateway/intersection enhancements, within the FID.

1. Landscaping should be used to accentuate and frame important view corridors.
2. Landscaping shall employ a common three-tiered approach to design:
  - a. Trees
  - b. Shrubs, vines and tall grass-like materials
  - c. Groundcovers (does not include turf)
3. Landscaping should be consistent and accentuated along arterial corridors and gateway intersections to emphasize district areas.
4. Street trees on major highways, and primary highways shall consist of on-center planting of deciduous trees in medians (whenever medians are required) and evergreen trees in parkways to provide seasonal variations of views during fall and winter months (clearer air and snow-capped peaks).
5. Secondary highways shall provide single species of evergreen trees planted in parkways.

6. Gateway intersection enhancements should incorporate the adjacent property tree species (used in buffer setback) in order to provide background and screening, and be enhanced with accent trees selected for their character and shape.
7. Primary and secondary gateways will include thematic monumentation for district identification and reflect elements of local identity (i.e. river rock, concrete, City logo, etc.).
8. All gateway intersection enhancements shall incorporate decorative paving at corner areas and plant materials that promote the best of water-efficient landscaping.

### **C. Streetscape Concept**

The Streetscape Concept Plan for the project area is shown on Exhibit 6-5. The plan identifies major, primary, and secondary highways, as well as collector streets and the gateway intersections within the Specific Plan area. Roadway classifications are consistent with the General Plan, Circulation Master Plan.

1. **Major Highway Streetscape.** Major highway streetscapes define the image of the City and its districts, while providing arterial linkages within and beyond the City. There are four streetscape concepts for major highways: Six-Lane Major Highway, Modified Six Lane No Median Major Highway, Modified Six Lane Residential Adjacent Major Highway, and Eight-Lane Major Highway. These major highway streetscapes are designed in response to special design needs, right-of-way, and adjacencies. Major highways within the FID are short sections of Cherry Avenue, Citrus Avenue, and Valley Boulevard. Streetscape cross-sections are in Exhibits 6-6, 6-7, and 6-8.
2. **Primary/Secondary Highway Streetscape.** Primary/Secondary highway streetscapes define thoroughfares throughout the City. Primary highways within the FID are Beech Avenue, Fontana Avenue, Mulberry Avenue, and Slover Avenue. The only secondary highway is Poplar Avenue. Streetscape cross-sections are in Exhibit 6-9 and 6-10.

Exhibit 6-5 – Streetscape Concept Plan

Exhibit 6-6 – Modified Major Highway – 6 Lanes – Cross-Section A-A (Valley Boulevard)

Exhibit 6-7 – Major Highway – 8 Lanes – Cross-Section B-B (Cherry Avenue)

Exhibit 6-8 – Major Highway – 6 Lanes – Cross-Section C-C (Citrus Avenue)

**Cross Section D-D**  
**Primary Highway - 4 Lanes**  
**(Beech, Fontana, Mulberry, and Slover Avenues)**

Exhibit 6-9 – Primary Highway – 4 Lanes – Cross-Section D-D (Beech Avenue, Fontana Avenue, Mulberry Avenue, and Slover Avenue)

Exhibit 6-10 – Secondary Highway – 4 Lanes – Cross-Section E-E (Poplar Avenue)

### **3. Gateways**

#### **A. Concept Plan**

The Streetscape Concept Plan Exhibit 6-5 identifies a hierarchy of primary, secondary, and tertiary gateways. The intent of the gateway intersection enhancements is to provide a visual statement that you are within the Specific Plan area.

The gateway intersection enhancements should all incorporate uniform treatments (to varying degrees) within expanded corner setback areas (45 degree diagonal right-of-way). Depending on the hierarchy level, each gateway shall include special corner/sidewalk paving, planting schemes that highlight drought tolerant species, and monumentation signage. Monument signs are optional on tertiary gateway intersections.

Each corner planting scheme shall incorporate the three-tiered planting concept, consisting of accent trees, shrubs, or tall grass-like plant material, and a ground cover. Dense planting of evergreen tree species consistent with adjacent buffer setback plantings shall provide a background/screen for each corner setback area.

Gateway conceptual designs with typical dimensions (plan views) are illustrated in Exhibits 6-11, 6-12, and 6-13. The monument sign concept as it would appear in front of the planting treatment is illustrated in Exhibit 6-14.

Gateway enhancements and monument sign enhancements shall meet the City's line of sight regulations, as determined by the City Engineer. Dimensions of monument signs shall comply with Section 6.7.D.12. Monument Sign.

#### **B. Dedication and Maintenance of Gateway Intersection Enhancements**

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for gateway intersection enhancements in Section 6.8.B Public Right-of-Way Streetscape-Gateways, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standards indicated in Section 6.5., Public Right-of-Way Streetscape; and

- iii. Enter into an agreement with the City that specifies perpetual maintenance.
- b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.
- c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure the installation and perpetual maintenance of the gateway intersection enhancements.

Exhibit 6-11 – Primary Gateway Intersection Enhancement Concept

Exhibit 6-12 – Secondary Gateway Intersection Enhancement Concept

Exhibit 6-13 – Tertiary Gateway Intersection Enhancement Concept

Exhibit 6-14 – Monument Sign Concept

#### 4. Street Furniture

Exhibit 6-15 – Street Furniture Palette, identifies recommended street furniture components, including lighting, trash receptacles, and benches, for the district. The palette is intended to ensure a unified visual identity for the district, which is distinct from the other districts within the Specific Plan area.

and bench by  
LandscapeForms

Exhibit 6-15 – Street Furniture Palette.

**C. Freeway Edges Design Criteria**

Freeway edges are an important part of the overall specific plan area and should be consistent with the overall Specific Plan landscape palette. General guidelines include:

1. A minimum of a 20-foot landscape zone (measured from the private property line to the adjacent I-10/railroad right of way). Plantings should reflect the primary highway planting palette to the extent feasible.
2. Landscape treatments along the freeway corridor should serve as a windbreak to protect the sites from seasonal strong winds. Windbreak elements include a row of medium height (20 to 25 feet) dense trees, a row of taller trees (40 to 45 feet) and a row of medium height (8 to 10 feet) dense shrubs.
3. Undesirable views such as parking lots and loading/service areas visible from the I-10 freeway are prohibited.

## **6.9 Design Guidelines**

### **A. Design Objectives**

The Design Guidelines will promote and reinforce the City's commitment to high quality development. In general, the guidelines are intended to ensure that development preserves or improves the positive characteristics of the City's image. The objectives of these guidelines are to:

- Promote orderly development by implementing the SWIP Specific Plan objectives, policies, and principles found in Chapter 2.o.
- Protect and enhance property values by ensuring that development fits properly within the context of its surroundings and does not negatively impact adjacent uses.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian and motor vehicle circulation within a project and convenient pedestrian linkages to and from adjacent residential, commercial, industrial, and school areas.

### **B. Design Intent**

The FID encourages innovative architecture and site design that relate to the adjacent freeway, local roads, and surrounding neighborhoods. Scale, building articulation, on-site circulation patterns, and interface with adjacent uses are important in developing well-planned, integrated commercial and industrial uses.

### **C. Industrial, Distribution, and Business Park Uses**

The design guidelines in this Subsection shall apply to all industrial projects within this land use district.

### 1. Site Design

#### Site Layout

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street
  - Parking in front of building with a landscape buffer between parking and street. **See Figure 1.**

Figure 1. Appropriate building and landscape placement adjacent to public street.

- Visitor parking may be located at the front of the building adjacent to the main entry while employee parking and service areas are located at the sides and rear of the building. **See Figure 2.**

Figure 2. Parking layout.

- Service and loading should not be located on building side(s) adjacent to a public street.
- When buildings abut residential properties or the I-10 freeway, parking and loading areas should be located at the side of the building instead of the rear. The rear setback area shall be fully landscaped. **See Figure 3.**
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal containers are prohibited.
- Noise-generating activities and storage areas shall be located as far as possible from adjacent properties. Sound attenuation walls shall be used where appropriate to reduce noise.
- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. **See Figure 4.**

Figure 3. Fully landscaped setback adjacent to freeway.

Figure 4. Appropriate location of loading areas.

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.).
- Business park developments should provide recreational facilities (e.g., bicycle

paths, tennis courts, volleyball courts, gymnasiums, etc.).

## 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets. **See Figure 5.**
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest, especially for development located along the I-10 Freeway. **See Figure 6.**
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between sensitive uses and outdoor work areas, loading, and storage.

## 3. Site Elements

### Fences and Walls

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way. **See Figure 7.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.

Figure 5. Buildings are oriented to create gateway into development.

Figure 6. Buildings are oriented to provide architectural features visible from the freeway.

Figure 7. Tubular steel and stone pillars are appropriate fencing materials.

- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall. **See Figure 8.**
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti. **See Figure 8.**

Figure 8. Wall is articulated with pillars and incorporates landscaping at the base and vines to deter graffiti.

### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 9.**
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view, especially adjacent to the I-10 freeway.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from the I-10 freeway. **See Figure 10.**

Figure 9. Appropriate placement, orientation and screening of service areas.

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.

Figure 10. Screening of roof mounted equipment.

- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 11.**
- Trash enclosures shall integrate horizontal screening such as trellises.

Figure 11. Trash enclosures with architectural screening elements.

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and the I-10 freeway and adjacent to residential zones, and to prevent light spillover onto adjacent properties. **See Figure 12.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 13.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building. **See Figure 14.**

Figure 12. Hooded light fixture directs light downward.

Figure 13. Bollard lighting along pedestrian walkway.

Figure 14. Decorative light fixtures.

#### 4. Parking and Access

##### Parking

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 15.**

Figure 15. Parking lot landscaping.

- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside of the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving

multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 16.**

- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 17.**

### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts. **See Figure 18.**

Figure 16. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 17. On-site stormwater capture system.

Figure 18. Shared parking access.

- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 19.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

Enhance project entries with landscaping and special paving for visual impact.

Figure 19. Entry drive.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses (e.g., residential, schools, etc.).
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 20.**

Figure 20. Incorporation of vertical offsets and material changes.

### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest. **See Figure 21.**
- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 22.**

Figure 21. Façade articulation.

Figure 22. Use of cornices, window trim and grooves.

- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 23.**

Figure 23. Enhanced corner elements.

- The orientation of windows in buildings adjacent to a residential zone shall preclude a direct line of sight into residential properties.
- Primary building entries shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a building's entry. **See Figure 24.**

Figure 24. Articulated Entries.

Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 25.**

- Locate and/or screen rooftop equipment so that it is not visible from the street. Rooftop screening shall be integral to the building's form.

Figure 25. Offset roof planes.

## Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.
- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color. **See Figure 26.**
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.

Figure 26. Use of expansion joints.

## 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and shall be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) trees;
  - 2) shrubs and vines; and
  - 3) ground covers

**See Figure 27.**

See suggested Plant Palette in Table 6-6.

Figure 27. Three-tiered planting system: trees, shrubs, and ground covers.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. Incorporation of appropriate public art is highly encouraged.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection.
- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls. Water features and public art are also encouraged. **See Figure 28.**
- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 29.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction. **See Figure 30.**

Figure 28. Plaza area.

Figure 29. Wall incorporates landscaping to soften appearance and deter graffiti.

Figure 30. Plant material along buffer wall.

- Landscaping and trellises with vines are encouraged for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to residential zones shall include dense landscaping to provide visual screening and noise abatement.
- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 31.**

Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area. **See Figure 32.**

- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/stormwater treatment features and bioswales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 33.**
- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.

Wall, landscaping and berms screen industrial buildings and storage

Figure 31. Landscaped berms.

Figure 32. Landscaped parking lot.

Figure 33. One site water filtration.

- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection.
- Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### D. Commercial Uses

#### 1. Site Design

##### Site Layout

- The arrangement of multiple buildings and associated circulation and parking shall reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas enhance publicly-accessible spaces. **See Figure 34.**
- Loading areas, access and circulation driveways, trash enclosures, storage areas, and rooftop equipment shall be located as far as possible from adjacent residentially zoned properties.
- Site design shall take into consideration the public street and relationship to freeway access and adjacent uses.

Figure 34. Site plan emphasizes pedestrian connectivity.

- Buildings may be located adjacent to the street with a fully landscaped setback or buildings may be set back with limited parking in front. **See Figure 35.**

Figure 35. Limited parking adjacent to street with landscape setback.

## Courtyards and Plazas

- The organization and design of buildings shall encourage and facilitate pedestrian activity.
- Buildings should be organized to create usable open space, courtyards, plazas and dining areas. **See Figure 36.**
- Pedestrian-oriented open spaces, courtyards and plazas shall include a focal element such as a sculpture and/or water feature and sitting areas. **See Figure 37.**

### 2. Building Orientation

- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.

Figure 36. Buildings create courtyard.

Figure 37. Open plaza areas with seating.

- Commercial buildings on corner parcels shall establish a strong tie to both streets and should encourage pedestrian activity at corner locations. **See Figure 38.**
- Buildings associated with service retail and restaurant uses shall be pedestrian-scaled, with entries fronting onto streets, plazas or courtyards to reinforce pedestrian orientation.
- Commercial development shall be oriented away from residential streets. At corner locations, if the side street primarily serves a residential neighborhood, development and access shall be oriented away from the side street.
- Buildings adjacent to sensitive uses (e.g. schools, residential) should be buffered. This may be accomplished by providing masonry walls, landscaped berms, appropriate building orientation, building height stepbacks and limitations on activities adjacent to sensitive uses. **See Figure 39.**

Figure 38. Commercial/retail buildings on corners should establish strong tie to the street.

Figure 39. Masonry wall and landscaping separates uses.

- Commercial and retail buildings should generally be placed at or near setback lines with developments oriented in a manner that will provide visual interest, especially for developments located along I-10 Freeway.
- Buildings should be oriented in a manner that takes advantage of passive solar design to the maximum extent feasible.

### 3. Site Elements

#### Fences and Walls

- Wall heights and surfaces shall be articulated with varying façade depths or pilasters to promote architectural interest, and may include a cap along the top of the wall. **See Figure 40.**
- Walls visible from public streets shall be decorative and complement the design of on-site buildings.
- Wall and fencing materials may consist of brick, stone, stucco, wrought iron or tubular steel. Wall and fencing colors should match building colors, with neutral earth tones.
- Walls and fences shall be integrated with landscaping along the base of the wall or fence. **See Figure 41.**
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

Figure 40. Wall incorporates pilasters and cap.

Figure 41. Stone wall.

## Screening

- Service and delivery areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 42.**
- Outdoor mechanical equipment shall be screened from public view, especially adjacent to the I-10 freeway.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from the I-10 freeway. **See Figure 43.**

Figure 42. Screened delivery area.

Figure 43. Screening of roof-mounted equipment.

## Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site.
- Trash enclosures visible from the public view shall integrate horizontal screening such as trellises.

## Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.

- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and the I-10 freeway and adjacent to residential zones, and to prevent light spillover into adjacent properties. **See Figure 44.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 45.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures. **See Figure 46**
- Decorative light fixtures are encouraged, as long as fixtures are consistent with the architectural design of the building. **See Figure 47.**

#### 4. Parking and Access

##### Parking

- Parking lots should be designed with a clear hierarchy of circulation: major access drives with no direct access to parking spaces; major circulation drives with little or no parking; and parking aisles for direct access to parking.
- Large commercial and retail parking areas should be located behind building facades so as not to be visible from major streets.
- Parking lots shall not be the dominant visual element on the site.

Figure 44. Hooded light fixture directs light downward.

Figure 45. Bollard lighting along pedestrian walkway.

Figure 46. Pole mounted light.

Figure 47. Decorative light fixtures.

- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 48.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat gain and the visual impacts of large parking areas.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 49.**
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 50.**

### Access - Vehicular

- Access to parking lots shall be from commercially developed streets to discourage cut through traffic from adjacent residential neighborhoods.
- Site access shall promote safety by providing an adequate stacking distance for vehicles between the back of the sidewalk and the first parking stall or circulation aisle.
- Conflict between vehicles and pedestrians shall be avoided at access driveways by providing a walkway on at least one side of the driveway.
- The number of access driveways shall be minimized and located as far as possible from street intersections.
- Site access locations shall be coordinated with existing or planned median openings and driveways on the opposite side of the roadway.

Figure 48. Landscaped parking lot.

Figure 49. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 50. On-site storm water capture.

- Unobstructed line of sight at corners and driveways shall be provided to reduce vehicular conflicts. **See Figure 51.**
- Avoid placing primary vehicle access in close proximity to major building entrances in order to minimize pedestrian and vehicular conflicts. **See Figure 52.**

#### Access - Pedestrian

- Clearly defined pedestrian walkways or paths should be provided from parking areas to primary building entrances. Clear and convenient pedestrian access shall be provided between the public sidewalk and the pedestrian areas of the development. **See Figure 53.**
- Raised walkways, decorative paving, landscaping and/or bollards shall be used to separate pedestrian paths from vehicular circulation areas. **See Figure 54.**

Figure 51. Unobstructed sight lines.

Figure 52. Vehicle access is placed away from building entrances.

Figure 53. Clearly defined pedestrian walkways.

Figure 54. Raised walkway and landscaping in parking lot.

- Parking areas should be designed so that pedestrians walk parallel to moving cars. **See Figure 55.**

### Loading and Delivery

- Loading and delivery service areas shall be located and designed to minimize their visibility, circulation conflicts, and adverse noise impacts to the maximum extent feasible.
- Loading and delivery service areas shall be screened with portions of the building, architectural wing walls, freestanding walls or landscape planting.
- When commercial buildings abut a residential zone or the I-10 freeway, loading areas shall not be visible from adjacent residentially-zoned properties or the I-10 Freeway.
- Loading areas shall be designed to not interfere with circulation or parking, and to permit trucks to fully maneuver on the property without backing from or onto a public street. **See Figure 56.**
- Service, loading and delivery areas should take access from planned shared access points to reduce curb cuts along project frontages.

Figure 55. Pedestrian circulation.

Figure 56. Loading area placed behind building outside of circulation lanes.

## 5. Architecture

### Mass and Scale

- The mass and scale of new developments shall be compatible with the existing, adjacent structures. This can be accomplished by transitioning from the height of adjacent buildings to the tallest elements of the new development by stepping back the upper portions of taller buildings.
- Human-scale elements, such as pedestrian-scaled doors, windows and building modules shall be used to emphasize pedestrian orientation.
- The size and location of various building elements (e.g., roofs, parapet walls, wing walls, etc.) shall be in scale to the building as a whole and provide visual interest. **See Figure 57.**

Figure 57. Building elements add visual interest.

### Building Facades

- Buildings shall include enhanced and articulated facades along public streets.
- Design details shall be continued or repeated upon all building elevations.
- Building entrances should be readily identifiable. The use of recesses, projections, columns, and other design elements to articulate entrances are encouraged. **See Figure 58.**
- Facades shall provide visual interest with vertical and horizontal variations in wall and roof planes, building projections, door and window bays, arcades, and similar elements/techniques. **See Figure 59.**

Figure 58. Building Entry.

Figure 59. Horizontal and vertical articulation.

- Buildings shall undergo a break in façade approximately every 40 feet, to create a varied wall surface along public areas. Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public right-of-way frontage.
- Buildings shall be well-articulated along the freeway frontage with a high degree of architectural detail.
- Buildings should include vertical elements (e.g., clock tower, building articulation) that create points of visual interest when viewed from the freeway.
- Roof designs that are visually interesting and designed to completely screen all roof-top equipment from public streets and freeway views are required. **See Figure 6o.**
- The location of windows in commercial buildings adjacent to residential zones shall preclude a direct line of sight into residential properties.
- Buildings should use large windows along walls and skylights in rooftop designs to capture natural light during operating hours.
- The interior areas of commercial development should have shaded or covered walkways.

### Storefronts

- Storefronts shall be comprised predominantly of transparent surfaces (windows). **See Figure 61.**
- The use of clear glass on the first floor strongly encouraged.

Figure 6o. Full roof screens all equipment and provides visual interest.

Figure 61. Storefront windows.

- Storefront windows shall be large and a minimum of 24 inches off the ground. The maximum bulkhead (wall plane between the ground and the bottom of the windows) height should be approximately 36 inches.
- Storefront entries should promote a sense of entry into the structure as well as provide a sense of shelter by incorporating elements such as overhangs, canopies, awnings, and recesses. **See Figure 62.**
- If security grilles are necessary, they shall be placed inside the building behind the window display area at a minimum distance of two feet behind the window.
- Product storage racks shall not block views through storefront windows.

#### Colors and Materials

- The use of a coordinated three-color palette for the base color and major and minor trim accents is encouraged.
- Colors for all structures on-site should be varied and should consist of neutral, earth tones. **See Figure 63.**
- Exterior finish materials shall be appropriate for the architectural style and/or theme of the entire development and should contribute towards a high-quality image. **See Figure 64.**
- Changes in materials shall occur at inside corners to make building volumes appear substantial.
- Materials shall be varied to provide architectural interest; however, the number of materials shall be limited and not exceed what is required for contrast and accent of architectural features.

Figure 62. Storefront overhangs provide a sense of shelter and entry.

Figure 63. Use of neutral, earth tones.

Figure 64. Exterior finish materials.

- Exterior materials and architectural details shall relate to each other in ways that are traditional and logical. For example, heavy materials should appear to support lighter ones. **See Figure 65**

### 6. Landscaping

#### Plants and Irrigation

- Landscaping should help complete the design of the site and enhance the quality of commercial developments by framing and softening the appearance of buildings, screening undesirable views, and buffering incompatible uses.
- Landscaped areas should generally incorporate planting utilizing a three-tiered system:
  - 1) trees
  - 2) shrubs and vines, and
  - 3) ground covers (including flowering plants—annuals and perennials).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. **See Figure 66.**
- Planting materials shall be used in plazas or gathering areas to provide shade and soften the appearance of hard surfaces. Water features and public art are also encouraged in these places. **See Figure 67.**
- Trees located along street frontages shall be selected to match or complement existing or proposed street trees in the public right-of-way.
- A minimum five-foot landscape strip shall be used along circulation aisles in parking lots, and along building side/rear elevations if a walkway is not used. A landscape strip is also encouraged in nonpublic areas and service areas between pavement and buildings.

Figure 65. Heavy materials at base of building with lighter materials above.

Figure 66. Highlighting entry points.

Figure 67. Public plaza area within commercial development incorporates water feature.

- On-site water filtration features and bioswales are strongly encouraged, and can also be used as buffering methods for adjacent businesses.
- Drought-tolerant and low-water trees, vines, and groundcovers shall be used on-site. When feasible, drip irrigation systems shall be installed to provide on-site vegetation with appropriate irrigation and ensure the highest possible volume of water conservation.
- Planting materials shall be used to provide a buffer against noise, and may be integrated with walls or fences to achieve desired sound reduction and appearance.
- Tree and shrub planting shall be done in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### Site Furniture

- Outdoor furniture and fixtures (e.g., lighting, directional signs, trellises, raised planters, works of art, benches, trash receptacles, fencing, etc.) shall be integral elements of the building and landscape design. **See Figure 68.**
- Outdoor furniture shall be of a sturdy construction to withstand daily use. Wood should be avoided.
- Outdoor furniture shall be located so it will not conflict with the pedestrian and motor vehicle circulation patterns. **See Figure 69.**
- Outdoor seating should be shaded.

### Paving

- Decorative paving shall be incorporated into courtyards, plazas, pedestrian walkways, and crosswalks. **See Figure 70.**
- Paving materials shall complement the architectural design of the building and landscape design of the project. The use of stamped concrete, stone, brick, permeable pavers, exposed aggregate, or colored concrete is encouraged. The use of slippery materials (e.g., polished marble or granite) is prohibited.

Figure 68. Trellis.

Figure 69. Outdoor furniture outside of pedestrian walkway.

Figure 70. Enhanced paving in pedestrian areas.

### ***E. Flex-Tech Multi-Use Facility***

The design guidelines in this Subsection shall apply to all flex-tech projects within this land use district.

#### **1. Site Design**

##### **Site Layout**

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street. **See Figure 71.**
  - Parking in front of building with a landscape buffer between parking and street.
- Visitor parking may be located at located near the front/visitor entries to the businesses, while employee parking and service areas are located at the sides and rear of the building.
- Service and loading area should not be located on building side(s) adjacent to a public street. Service and loading areas should be located to the rear of the buildings or in the interior of a multiple building complex. **See Figure 72.**
- When buildings abut residential properties or the I-10 freeway, parking and loading areas should be located at the side of the building instead of the rear. The rear setback area shall be fully landscaped.
- Outdoor storage, work, and loading areas shall be incorporated within the building

Figure 71. Fully landscaped setback.

Figure 72. Loading and service areas accessed between buildings in a multiple building complex.

design and located to the rear or side of buildings and screened from view from adjacent public streets. Accessory buildings such as equipment enclosures or storage buildings should be minimized. These service areas should be incorporated into the building design to the greatest extent feasible. **See Figure 73.**

- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal containers are prohibited.
- Noise-generating activities and storage areas shall be located as far as possible from adjacent properties. Sound attenuation walls shall be used where appropriate to reduce noise.

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.). **See Figure 74.**
- Larger developments should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

### 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form

Figure 73. Appropriate location of loading areas.

Figure 74. Outdoor seating area provided between buildings.

gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets.

- Retail and office space should be located on the front of the building, visible from the public realm and adjacent to visitor parking. Flex areas used for warehousing, distribution, light manufacturing, research and development and other uses without a visitor component should be located to the sides or rear of the building.
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest, especially for development located along the I-10 Freeway.
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between surrounding properties and outdoor work areas, loading, and storage.

### **3. Site Elements**

#### **Fences and Walls**

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way.
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.

- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall.
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti.

### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from visitor areas and adjacent public streets.
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view, especially adjacent to the I-10 freeway.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from the I-10 freeway. **See Figure 75.**

Figure 75. Screening of roof mounted equipment.

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.

- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 76.**
- Trash enclosures shall integrate horizontal screening such as trellises.

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and the I-10 freeway and adjacent to residential zones, and to prevent light spillover onto adjacent properties.
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 77.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building.

Figure 76. Trash enclosures with architectural screening elements.

Figure 77. Lighting along pedestrian walkway.

## 4. Parking and Access

### Parking

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect.
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside of the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 78.**
- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 79.**

### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts.

Figure 78. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 79. On-site stormwater capture system.

Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 80.**

- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

Figure 80. Entry drive.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses (e.g., residential, schools, etc.).
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 81.**
- Buildings should be designed to accommodate a wide range of uses, from office to small scale retail and service to light manufacturing. Interior spaces should allow for a variety of configurations, combining and dividing spaces as needed based on the uses.

Figure 81. Façade articulation.

### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest.

- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 82.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 82.**
- The orientation of windows in buildings adjacent to a residential zone shall preclude a direct line of sight into residential properties.
- Visitor entries to retail and office uses shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a space's entry. **See Figure 83.**
- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 84.**

Figure 82. Enhanced corner elements.

Figure 83. Awnings articulate entries to tenant spaces.

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.

Figure 84. Offset roof planes.

- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color.
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.

## **6. Landscaping**

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and shall be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) trees;
  - 2) shrubs and vines; and
  - 3) ground covers

See suggested Plant Palette in Table 6-6.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection.
- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.

- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls.
- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 85.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction.
- Landscaping and trellises with vines are encouraged for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to residential zones shall include dense landscaping to provide visual screening and noise abatement.
- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 86.**
- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area.
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/stormwater treatment features and bioswales should be a part of the overall landscape design, and can also

Figure 85. Wall incorporates landscaping at the base.

Figure 86. Landscaped berm buffers parking.

Figure 87. One site water filtration.

serve as buffering methods for adjacent businesses. **See Figure 87.**

- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection.
- Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

## F. Special Commercial Uses

### 1. Drive-Through Uses

#### Site Design

- The predominant feature along the street frontage should be the building, not parking lots or the drive-through aisle.
- The building shall be located to maximize the distance for vehicle queuing while screening the drive-through operations. **See Figure 88.**
- When adjacent to residential zones, outdoor order kiosks, loading/unloading areas, and storage areas shall be located as far as possible from residential properties.
- Drive-through aisles shall be located in the rear of the building away from the street frontage whenever possible. If the drive-through aisle is located between the building and the street, dense landscaping and landscaped berms shall be provided to screen the drive-through aisle from street view or provide screen wall (42 or less). **See Figure 89.**

#### Building Design

- All building elevations shall receive the same level of architectural detailing.
- Buildings shall incorporate roof designs with built-in equipment wells or other built-in screening methods, so that screening devices do not appear added-on.
- If the drive-through facility is a pad building within a shopping center, the architecture shall relate to and be compatible with the design of the center. The only feature that identifies the franchise shall be the company's logo and signs.

Figure 88. Vehicle queuing.

Figure 89. Example of appropriately landscaped and screened drive-through aisle.

## 2. Mini-Storage Facilities

### Site Design

- Offices and customer service areas shall be located adjacent to the street frontage to provide convenient access and help visually break up the front façade.

### Building Design

- Long, flat, unarticulated walls shall be avoided along street frontages. **See Figure 90.**
- Building walls and screen walls shall incorporate substantial articulation, and changes in plane and height to add visual interest.
- A minimum of two different building materials shall be used on building walls and screen walls adjacent to street frontages (e.g., stucco, brick, stone).
- Building materials, textures and landscaping shall be chosen to deter graffiti.

Figure 90. Articulated wall of mini-storage facility.

## 3. Parking Garages

### Site Design

- Where appropriate, parking garages should incorporate ground floor retail adjacent to the public sidewalk. **See Figure 91.**
- A minimum 5-foot wide landscaped strip shall be provided on all sides of the parking structure except where ground floor retail space is provided.

Incorporate retail or other compatible uses on ground floor whenever possible.

Figure 91. Liner shops.

### Building Design

- Parking garages shall be designed to help reduce the mass and scale of the garage and to ensure their compatibility with surrounding uses.
- Conceal view of vehicles in the garage through a combination of screen walls and plantings. **See Figure 92.**
- Avoid a monolithic appearance. This can be accomplished as follows:
  - Minimize horizontal and vertical banding by balancing both horizontal and vertical elements.
  - Use simple, clean geometric forms, and coordinated massing.
  - Step back upper levels of the garage 5 to 10 feet above the first floor. **See Figure 93.**
- Coordinate openings in the parking garage with the size and modulation of adjacent windows, structural bays, and storefronts if the parking garage contains other uses.
- Size openings in the parking garage to resemble large windows as in an office building.
- Use masonry materials that are predominantly light in color, but avoid unpainted concrete.
- Avoid a sloping ramp appearance by providing level and uniform wall panels between floors.
- Visually define and differentiate between pedestrian and vehicular entrances through appropriate architectural detailing. **See Figure 94.**

Figure 92. Parking structure with landscaping.

Figure 93. Horizontal and vertical articulation breaks up parking structure elevation.

Figure 94. Paving differentiates between pedestrian and vehicular entries.

## Access and Circulation

- Vehicle stacking areas for entering and exiting traffic shall be sufficient in length to minimize traffic backup into surrounding streets or within the garage. A minimum of two vehicle lengths of stacking distance shall be provided between the back of the sidewalk and the control gate.
- One inbound lane shall be provided for a garage with a capacity of up to 500 vehicles. At least two inbound lanes shall be provided for garages with a capacity of more than 500 vehicles.
- The maximum aisle length shall not exceed 400 feet without providing a cross aisle.
- Ramp grades shall not exceed 10 percent and parking areas shall not exceed a slope of four to five percent.

## Security and Lighting

- The design of the garage shall eliminate possible hiding places and openings that could allow random pedestrian access.
- During periods when parking activity is substantially less than the garage capacity (i.e., during night operations), there shall be a means of securing unused parking levels from use, including stairwells and elevators. If the garage is not operated on a 24-hour basis the entire facility shall be secured from access during hours when the facility is closed.
- For security reasons, at least one or two sides of the stair tower shall include glass running vertically the height of the tower. Elevators shall be provided with glass-back cabs and shafts. **See Figure 95.**
- Stairs and elevators shall be located adjacent to a street on the exterior of the structure where lobbies can be exposed to outside view.

Figure 95. Glass-back elevator cab and shaft.

- The use of security cameras is required.
- A minimum of five foot-candles shall be provided inside the structure and a minimum of three foot-candles for exterior parking areas. Higher levels are recommended for remote areas subject to security problems such as stairways, elevators, and other pedestrian access points.
- Lighting levels shall be equally distributed to provide uniform illumination over all parking areas.
- Light sources shall be shielded so that the source of the illumination is not seen from outside the structure.

### 5. Service Stations

#### Site Design

- The site shall be designed to accommodate anticipated circulation patterns and those patterns should be defined by paving and by well-placed landscaped areas.
- In areas developed with buildings adjacent to the sidewalk, service stations shall also be oriented to the sidewalk, placing any service bay door and car wash openings on the rear of the structure.
- Where commercial development abuts the service station, two-way vehicular access integrated with the adjacent commercial development shall be provided where feasible.
- The site design for projects located at street corners shall provide a strong design element at the corner to help frame the public right-of-way and anchor the corner. **See Figure 96.**
- Parking spaces for vehicles left for repair shall be located in the least visible areas of the site and screened from public view.

Figure 96. Corner landscaping element.

- Service or car wash bays shall not face toward a public street or toward residential zone if the building is within 200 feet of a residential zone.
- Work bays shall be oriented so that the interior of the bays are not visible or audible from a public street, adjacent residential zones, or designated open space. **See Figure 97.**
- Each pump island shall include a vehicle stacking area for at least two vehicles (38-feet), on at least one end of the pump island and shall not restrict vehicle circulation and parking areas.
- A gasoline tanker truck unloading zone shall be provided and shall not obstruct vehicle circulation and parking areas.

Figure 97. Work bays face interior.

### Building Design

- Service station buildings shall be designed to complement and be compatible with the predominant architectural theme and scale of the area. If located within a multi-use center, the architectural design shall be compatible with the design of the center.
- The design of the building should be clean and simple, and shall relate to surrounding buildings through use of similar scale, materials, colors, and/or detailing.
- Building elevations facing public streets and residential zones shall be architecturally detailed to provide interest and the appearance of quality development.
- The roof design of service stations, including pump island canopies, shall incorporate full, pitched roof treatments with a low to moderate slope. **See Figure 98.**

Figure 98. Sloped roof on pump island canopies.

- Building materials shall have the appearance of substance and permanency (e.g., masonry).

### Landscaping and Walls

- A three-foot high, landscaped berm, a dense hedge, or a low-profile wall shall be provided along all street frontages where parking is provided. **See Figure 99.**
- A minimum six-foot high decorative masonry wall shall be provided along side and rear property lines not abutting public streets. A minimum 5-foot wide landscaped planter shall be provided adjacent to the wall in areas accessible to the public.

Figure 99. Landscaped berm.

### Site Elements

- Gates, fencing, and walls shall remain free of signs or other advertisements.
- The use of chain-link fencing is prohibited.
- Where security is an issue, fencing shall consist of open grille work, and the use of surveillance cameras is encouraged.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

## 6. Truck Stops

### Site Design

- The site shall be designed to accommodate anticipated circulation patterns and those patterns should be defined through paving and well-placed landscaped areas.
- In truck stops that provide maintenance facilities, any service bay doors and car wash openings shall be oriented away from the public street or freeway or placed to the rear of the site.

- The site design for projects located at street corners shall provide a strong design element at the corner to help frame the public right-of-way and anchor the corner.
- Parking spaces for vehicles left for minor repair shall be located in the least visible areas of the site and screened from public view.
- Truck stops shall be located within an industrial area within close proximity to an I-10 freeway on/off ramp..
- Service or car wash bays shall not face toward a public street nor toward a residential zone if the building is within 200 feet of a residential zone.
- Work bays shall be oriented so that the interior of the bays are not visible or audible from a public street, adjacent residential zones, or designated open space.
- A gasoline tanker truck unloading zone shall be provided and shall not obstruct vehicle circulation and parking areas.

### **Building Design**

- Truck stop buildings shall be designed to complement and be compatible with the predominant architectural theme and scale of the area.
- The design of the building should be clean and simple, and shall relate to surrounding buildings through use of similar scale, materials, colors, and/or detailing.
- Building elevations facing public streets and residential zones shall be architecturally detailed to provide interest and the appearance of quality development.

- The roof design of fueling stations, including pump island canopies, shall incorporate full, pitched roof treatments with a low to moderate slope.
- Building materials shall have the appearance of substance and permanency (e.g., masonry).

### **Landscaping and Walls**

- A three-foot high, landscaped berm or a dense hedge shall be provided along all street frontages where parking is provided.
- A minimum six-foot high decorative masonry wall shall be provided along side and rear property lines not abutting public streets. A minimum five-foot wide landscaped planter shall be provided adjacent to the wall in areas accessible to the public.

### **Site Elements**

- Gates, fencing, and walls shall remain free of signs or other advertisements.
- The use of chain-link fencing is prohibited if visible from a public street or the I-10 freeway.
- Where security is an issue, fencing shall consist of open grille work, and the use of surveillance cameras is encouraged.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

## **7. Shopping Centers**

### **Site Design**

- Large commercial sites shall be separated from residentially-zoned properties by streets, landscaped buffers and/or decorative masonry walls.

- Portions of primary buildings and/or freestanding satellite buildings shall be located at the street setback lines to enclose the site and help frame the street. **See Figure 100.**
- Buildings within the center shall have a logical spatial and functional relationship to each other and shall provide for convenient pedestrian circulation throughout the center.
- Parking shall be provided within convenient walking distances of all tenants. Walking paths to buildings from the public street shall be provided. **See Figure 101.**
- To reduce the visual impact of large paved areas, parking lots shall be broken up into smaller areas separated by landscaping, pedestrian circulation areas and drive aisles.
- Storage areas and loading facilities shall be limited in number and shall be designed, located, and screened to minimize their visibility from outside public areas, surrounding streets, freeways, and freeway on/off ramps.

### Building Design

- Buildings, hardscape, landscape, site furnishings and signage should reflect a unified theme. **See Figure 102.**
- Where a shopping center is nearby residential zone, the scale of the shopping center shall be reduced to be compatible with the adjoining use by:
  - Keeping buildings as small as possible, particularly in height;
  - Reducing scale through building wall articulation, added detailing and avoiding large scale design elements;

Figure 100. Buildings placed at street setback lines.

Figure 101. Walking paths.

Figure 102. Unified theme.

- Developing the center as a complex of smaller buildings connected by pedestrian-oriented open spaces; and/or
  - Setting the buildings further away from the residential zone and providing dense landscape screening .
- Long, linear buildings shall be avoided. Where such buildings are unavoidable, their length shall be mitigated by changes in building height, wall plane, and spatial volumes and by varied use of window areas, arcades, roof elements, and building materials. **See Figure 103.**
- If the shopping center contains a large scale building, integration of smaller-scale shops along the exterior of the building with entrances from the exterior of the building are desirable in order to create a more human scale and pedestrian-oriented character.
- Side and rear elevations of commercial buildings that are visible from residential zones or public rights-of-way shall be architecturally consistent with the front elevations of the building.
- Blank walls adjacent to main pedestrian areas shall be avoided.
- Flat roofs, mansard roofs, and veneer parapets are strongly discouraged in favor of full, pitched roof treatments. In large centers, a combination of flat roofs with decorative cornices and full, pitched roofs may be acceptable if the design presents a balanced appearance. **See Figure 104.**
- All roof-top and ground-mounted equipment shall be screened from view.

Figure 103. Articulation along wall plane.

Figure 104. Appropriate roofing.

- Outdoor sales and storage areas shall be designed to blend with the architecture of the main building. The height of the screening elements shall be tall enough to screen all stored materials. **See Figure 105.**

Figure 105. Outdoor sales area.

## 6.10 Development Incentives

This Section offers development incentives to produce greater land use efficiencies and reduce incremental costs for new development.

### A. Applicability

The incentives in this Section shall apply to all new development that meet(s) the applicable eligibility criteria.

### B. Definitions

For the purposes of this Section, lot consolidation and lot integration shall have the following meanings:

1. Lot consolidation. A legal action in which a lot line is removed or abandoned; a lot line is adjusted; lots are merged; or other equivalent action is taken, for the purpose of allowing a structure or development to be built so that it extends over what were previously two or more separate lots. A lot consolidation cannot create additional lots and cannot make existing lots nonconforming. All lots must be identical in ownership.

### C. Lot Consolidation Incentives

1. Eligibility requirements. In order to be eligible for the by-right development incentives indicated in Subparagraph 1 and 2, the minimum consolidated lot size for a development shall be 97,500 square feet.
2. By-right incentives. Eligible projects shall receive one or more of the following incentives:
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review), irrespective of the number of lots involved.
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 6.6 Parking and Loading Standards.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio [FAR]) and in maximum height shall be in the amounts listed in Table 6-10 – Allowable Bonuses for Lot Consolidation or Integration. The intensity and height bonus incentives shall apply to the total gross square footage of the consolidated lots or integrated lots.

| Table 6-10 – Allowable Bonuses for Lot Consolidation |                           |             |                        |
|------------------------------------------------------|---------------------------|-------------|------------------------|
| Base Intensity (FAR)                                 | Allowable Intensity Bonus | Base Height | Allowable Height Bonus |
| 1.0                                                  | 15%                       | 60 ft       | 15 ft                  |

**D. Green building incentives.**

1. Eligibility requirements. Projects that are seeking green building certification by a third-party entity (e.g., LEED, etc.) shall be eligible for the by-right development incentives indicated in Subparagraph 2.
2. By-right incentives.
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review).
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 6.6 Parking and Loading Standards, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio (FAR) and in maximum height shall be in the amounts listed in Table 6-11 – Allowable Bonuses for Green Building. The intensity and height bonus incentives shall apply to the total gross square footage of the project site.

| <b>Table 6-11 – Allowable Bonuses for Green Building</b> |                                  |                    |                               |
|----------------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <b>Base Intensity (FAR)</b>                              | <b>Allowable Intensity Bonus</b> | <b>Base Height</b> | <b>Allowable Height Bonus</b> |
| 1.0                                                      | 15%                              | 60 ft              | 15 ft                         |

**E. Application and review process for incentives.**

1. Written submittal. Interested parties shall submit a written request for approval of incentives to the Director of Community Development on forms provided by the Community Development Department.
2. Pre-application hearing. Before the approval of any incentives, the project applicant(s) shall attend a pre-application meeting with the Director of Community Development. Fees for pre-application meetings shall be waived.
3. Determination. The Director of Community Development shall determine whether the proposed new development meets the eligibility criteria in Paragraphs C.1 or D.1. Additional factors to be considered when reviewing applications for incentives shall include the following:
  - a. Detriment. The proposal will not detrimentally affect access, design, or other public safety and welfare concerns.
  - b. Covenants or conditions. The proposal will not violate recorded covenants.

- c. Right-of-way easements. The proposal will not invalidate any easement(s) unless the adjustment establishes replacement easement(s) that is properly filed with the city.
- 4. Conditions. Conditions may be imposed in connection with the granting of any incentive where the Director of Community Development deems that conditions are necessary to protect the public health, safety, and welfare.

## **6.11 Entitlement Procedures**

### **A. Purpose**

These administrative procedures have two major purposes:

1. Ensure that development conforms to the SWIP Specific Plan ("Plan").
2. Ensure that the City's review is as expedited as possible while remaining legal and proper.

### **B. Summary of Processing Procedures**

1. Conformity with the Plan. The Director of Community Development shall review each application for conformity with the development regulations in this Chapter. Conformity has two components:
  - a. Standards. Compliance with the Standards is mandatory and the City may not approve a project that fails to comply with the Standards.
  - b. Guidelines. The City may exercise discretion in evaluating the project's compliance with the Guidelines.
2. Project Review. Applications for development approvals shall be filed with the Department and may be returned for revision. Applicants must meet all items identified as "Standards". Applications must strive to meet the "Guidelines," but applicants may propose alternate ways to achieve the goals of the Guidelines.
3. Timing of Permits and Approvals. Required planning approvals shall be obtained before the issuance of any grading, building, or other construction permit, and before the proposed use is constructed, otherwise established, or put into operation.
4. Processing Requirements. Applications for planning permits shall be processed in compliance with Table 6-12 – Hearing Bodies.
5. Timing of Project Review. Project review shall be required before the issuance of a Building or Grading Permit, Business License, or Certificate of Occupancy for any new structure (not including fences or walls) and/or existing structures to be reconstructed or remodeled (including facade improvements).

**Notes:**

Decisions of any "Reviewing Body" may be appealed to the City Council, except where State law limits such appeal to the City Engineer. If the Planning Commission is listed above as the "Appeal Body", the Commission must first review an Appeal before it may be forwarded to the City Council for consideration.

DAB—Development Advisory Board

CD—Community Development Director

PC—Planning Commission

CC—City Council

PR—Parks and Recreation Commission

X\*—At the discretion of the Director of Community Development or his/her designee

X\*\*—If Public Park(s) are considered

X\*\*\*—City Engineer has final approval

f—Recommending body to the City Council

**C. Administration and Enforcement.**

The Director of Community Development shall enforce the provisions in this Specific Plan. All officers, employees, and officials of the City of Fontana, who are vested with the duty or authority to issue permits or licenses shall conform with this Specific Plan and shall not issue any permit or license, or approve any use or building, which would be in conflict with this Specific Plan. Any permit, license or approval issued that is in conflict with the requirements of this Specific Plan shall be considered null and void.

**D. Amendments to the Specific Plan.**

The SWIP Specific Plan may be amended utilizing the same procedures by which it was originally adopted. In addition, subsequent amendments to this Specific Plan shall demonstrate the amendment meets the intent of the Specific Plan's existing policy framework, or specific findings to demonstrate the amendment enhances the Plan or is necessary to more effectively implement the Specific Plan. All sections or portions of the Specific Plan proposed to be amended or that may be affected by the amendment must be identified during the amendment process. A concurrent amendment to the General Plan would not be required provided that the Director of Community Development determines that substantive changes would not influence the goals, objectives, policies, or programs of the General Plan.

Allowing flexibility in the administration of the Specific Plan enhances the effectiveness of the Specific Plan as a comprehensive, "living" planning document. The following minor modifications to the Specific Plan qualify for processing as an administrative amendment to the Specific Plan subject to the review and approval of the Director of Community Development:

- Changes in the location of infrastructure and public facilities (e.g., internal roads, drainage facilities, etc.).
- Minor change in roadway alignment.
- Adjustment of planning area boundaries provided the total acreage of the affected planning area does not increase or decrease by more than 20 percent of the total stated in the approved Specific Plan.
- Minor changes to the Design Guidelines, which are intended to be flexible in nature.
- Minor deviations (less than 10 percent) from the development standards in this Chapter.
- Other minor modifications similar to those listed above and deemed minor by the Director of Community Development, which are in keeping with the intent of the SWIP Specific Plan.

***E. Similar Use Determination***

1. **Applicability and Authority.** Unlisted uses in Table 6-2 are prohibited uses, unless the Director of Community Development finds a proposed use to be similar to an expressly allowed use in compliance with this Section. A Similar Use Determination is a process for determining when an unlisted use is similar in nature to a permitted or conditionally permitted use and may be permitted. As specified by Municipal Code Section 30-4 Other Uses to be determined by the Director of Community Development, the Director of Community Development shall have the responsibility and authority to make Similar Use Determinations.
2. **Ministerial Action.** A Similar Use Determination shall constitute a ministerial action.
3. **Application Contents and Filing.** An application for similar use shall be in writing on forms provided by the Director of Community Development.
4. **Determination Findings.** In determining “similarity,” the Director of Community Development shall make all of the following findings:
  - a. The characteristics of and activities associated with the proposed use are equivalent to one or more of the listed uses and will not involve a higher level of activity or environmental impacts than the uses listed in the land use district;
  - b. The proposed use will be consistent with the purposes of the applicable land use district; and
  - c. The proposed use will be consistent with the General Plan and this SWIP Specific Plan.
5. **Notice.** A Similar Use Determination shall be made in writing and shall contain the facts that support the determination. The Community Development Department shall maintain all determinations on record for review by the general public upon request. The notice shall include:
  - a. A brief statement explaining the criteria and standards considered relevant to the decision;
  - b. A statement of the standards and facts relied upon in rendering the decision; and
  - c. An explanation of appeal rights and appeal deadlines. The determination of similar use by the Director of Community Development shall be subject to appeal to the Planning Commission.

**F. Nonconforming Lots, Structures and Uses**

1. Nonconformance provisions are established to:
  - a. Bring all uses, structures, sites and signs into conformance with the developmental requirements and design guidelines in this Specific Plan;
  - b. Limit the occurrences and extent of nonconformance by prohibiting expansion, intensification, reinstatement, alteration, restoration after destruction, and reestablishment after abandonment; and
  - c. Gradually phase out nonconforming uses, structures, lots and signs.
2. Applicability
  - a. Nonconforming uses, structures, signs and lots may be maintained, expanded, altered and/or abated only in accordance with the provisions of this Specific Plan.
  - b. Any Designated Historic Landmark, or any property listed on the California Register of Historical Resources or National Register of Historic Places, shall be exempt from the provisions of this Section with respect to the restoration and maintenance of structures, provided that any construction plans are approved through a Certificate of Appropriateness by the Historic Preservation Commission/Planning Commission.
3. Nonconforming Uses. A use that lawfully occupied a building or land at the time this Specific Plan became effective, and that does not conform to the use regulations of the land use district in which it is located, is deemed a "legal nonconforming use." A legal nonconforming use may continue, subject to the following:
  - a. Discontinuation of Use
    - i. Loss of legal nonconforming status. If a legal nonconforming use is discontinued for a period of 90 or more days, regardless of the owner's intent, it shall lose its legal nonconforming status and the continued use of the property shall be required to conform to all provisions of this Specific Plan.
    - ii. Extension of legal nonconforming status. Wherein special circumstances exist, the Director of Community Development may extend the legal nonconforming status of a use, for up to an additional 90-day period. Furthermore, an additional extension may be granted by the Planning Commission, for up to an additional 90-day period. The total time period of all time extensions shall not exceed 180 days.
    - iii. Extension of legal nonconforming use.
      - (1) An application for a Minor Use Permit shall be filed with the Community Development Department on a City application form,

together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Community Development Department to process the application. The application shall be filed prior to the expiration of the 90-day period.

- (2) The application shall be reviewed by the Director of Community Development within 30 days following application filing. The Director of Community Development shall notify the applicant, in writing, as to whether the application is complete. If the application is not complete, the Director of Community Development shall specify those parts of the application that are not complete and shall identify the manner by which it can be made complete. If written notification is not provided to the applicant within 30 days following application filing, the application shall be deemed complete.
- (3) The Director of Community Development shall investigate the facts bearing on the application and provide the information necessary for action on the application, consistent with this Specific Plan and the General Plan. The applicant shall have made a good faith effort through the submittal of documentation and has diligently pursued compliance with this Specific Plan.
- (4) The application shall be reviewed by the Director of Community Development at a duly noticed public hearing, whom shall then approve, modify or deny the application. The decision of the Director of Community Development shall be final and conclusive in the absence of a timely filed appeal to the Planning Commission. An appeal of the Director of Community Development's decision shall be filed within 10 days from the date of the decision. An appeal of the Director of Community Development's decision shall be reviewed by the Planning Commission. The decision of the Planning Commission shall be final and conclusive in the absence of a timely filed appeal to the City Council.
- (5) The applicant may appeal the decision of the Planning Commission to the final deciding body, the City Council. The City Council decision shall be final and conclusive. If the application to extend the legal nonconforming use is approved by the City Council, the extension shall be granted for 90 days from the date of approval.
- (6) If the Director of Community Development or appointed designee has determined that the applicant has failed to show a good faith effort towards continually processing the extension of legal nonconforming use application (i.e., revising plans, withdrawing the application, placing the project on hold, etc.), the legal nonconforming use shall cease within 60 days from the application submittal date.

- (7) In granting an extension of the legal nonconforming status, the Director of Community Development may attach reasonable conditions and restrictions to the request, in addition to those required by this Specific Plan, which will ensure that the use:
  - Will not endanger the public health, safety or general welfare;
  - Will not injure the value of adjoining or abutting property;
  - Will not result in any significant environmental impacts; and
  - Will be in harmony with the area in which it is located.
- (8) In approving an extension of the legal nonconforming status, the Director of Community Development or Planning Commission shall consider and clearly establish the following findings of fact:
  - The non-conforming use has been discontinued within the 90-day period.
  - A physical and/or economic hardship has prevented the nonconforming use from being in compliance prior to the expiration of the 90-day period;
  - Approving the extension will not adversely affect the health, safety or general welfare.
- b. Change in Ownership, Tenancy or Management. A change in ownership, tenancy, or management of a nonconforming use shall not affect its legal nonconforming status, provided that the use did not discontinue pursuant to Section 3.ai entitled " Loss of legal nonconforming status," or the type of use and/or intensity of use does not change.
- c. New Development. New development on any lot or parcel upon which a legal non conforming use exists shall require that all uses on the property conform to the provisions of this Specific Plan.
- d. Alterations and Expansion of Use
  - i. A nonconforming use shall not be enlarged or extended in such a way as to occupy any part of any structure or property that it did not occupy prior to the creation of the nonconformity.
  - ii. A structure fully or partially occupied by any nonconforming use shall not be moved, altered or enlarged, unless required by law, or unless the moving, alteration or enlargement will result in the elimination of the nonconforming use.
- e. Intensification of Use. A nonconforming use shall not be intensified in such a way as to increase the discrepancy between existing conditions and the standards set forth in this Specific Plan.

4. Nonconforming Structures. A structure lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of the land use district in which it is located, including setbacks, separations, height and design, is deemed a "legal nonconforming structure." A legal nonconforming structure may continue to exist, subject to the following:
- a. Damage or Destruction
    - i. A legal nonconforming structure that is damaged or partially destroyed by fire, flood, wind, earthquake or other calamity, or the public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented by reasonable care and maintenance of the structure, may be reconstructed up to the original size, placement and density, provided that total cost of such reconstruction does not exceed more than 50 percent of the structure's current fair market value. The structure may be restored and the nonconforming use may be resumed, provided that restoration is started within 6 months, unless extended by the Director of Community Development, and diligently pursued.
    - ii. In the event that the cost of repairing such damage exceeds 50 percent of the current fair market value of the structure prior to such damage occurring, the structure may be reconstructed up to the original size, placement and density, subject to all of the following:
      - The Planning Commission, at a duly noticed public hearing, must find that continuing the nonconforming structure will not result in an annoyance to and/or reduction of any surrounding property; and
      - The extent of damage or partial destruction shall be based upon a comparison of the estimated cost of restoring the structure to its condition prior to such damage or partial destruction with its value at the time the structure was damaged or partially destroyed. Estimates for such purpose shall be made by or reviewed by the Building Official; and
      - The restoration is commenced within six months and diligently pursued to completion;
      - An application for a Nonconforming Structure shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Planning Division to process the application. The application shall be filed prior to the expiration of the 90-day period.
      - A structure or development that has been damaged or destroyed by fire, flood, wind, earthquake, or other calamity, or by public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented may be reconstructed up to the original size, placement and density, except a multiple family dwelling or

development which has been abandoned for a period of 90 or more days prior to being involuntarily damaged or destroyed, or a multiple family dwelling or development constituting a public nuisance prior to being involuntarily damaged or destroyed may not be reconstructed unless the structure is made to comply to all provisions of this Specific Plan.

- b. Alterations and Expansion
  - i. A nonconforming structure shall not be moved, altered or enlarged so as to increase the discrepancy between existing conditions and the most current standard as prescribed by the land use district in which the structure is located, except alteration and/or enlargement to a single family dwelling conducted pursuant to section (e) "Nonconforming Single-Family Residential Structures".
  - ii. Within land use districts, reasonable repairs and alterations may be made to legal nonconforming structures, provided that no structural alterations shall be made which would prolong the life of supporting members of a structure, such as bearing walls, columns, beams or girders. Structural elements may be modified only if such modification or repair is immediately necessary to protect the public health and safety, occupants of the legal nonconforming structure, or adjacent property, as determined by the Building Official. The total cost of such repairs or alterations may not exceed 50 percent of the replacement cost of the nonconforming structure.
- c. New Structures. Any new structure constructed on a lot or parcel with an existing legal nonconforming structure shall be constructed in conformance with all applicable provisions of this Specific Plan. However, in no case may a new nonresidential structure be constructed on the same lot as an existing legal nonconforming residential structure.
- d. Abatement of Nonconforming Structures Posing a Threat to the Public Health, Safety, and General Welfare. A structure which is nonconforming because of a violation or deficiency that poses a threat to the public health, safety or general welfare, as determined by the Building Official, and which fails to resolve, repair or improve such, or to fully mitigate the hazard involved, shall be abated, condemned or demolished upon the issuance by the City of a nuisance abatement, condemnations, or demolition order.
- e. Nonconforming Single-Family Residential Structures. In addition to the requirements of subsections a and d above, a nonconforming single family residential lot and/or structure that was lawfully established and maintained before the adoption of this Specific Plan, but which under the provisions of this Specific Plan does not conform with the regulations of the land use district in which it is located with respect to use, design and/or development standards, and which is continuously used and maintained for single family residential purposes, shall be subject to the following:
- f. Alterations and expansions to structures within nonresidential zones.

- i. Necessary repairs and desirable alterations, as deemed appropriate by the Director of Community Development, may be made to a legal nonconforming single family residential structure that is nonconforming as to use.
  - ii. A single family dwelling that is nonconforming as to its location within a land use district that does not permit single family dwellings, and in which the residential use was lawfully established and continuously maintained, shall be subject to the development regulations of the Municipal Code Chapter 30 Zoning and Development Code that pertain to the R1 zoning district and off-street parking and loading regulations..
- 5. Nonconforming Signs. A sign lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of Section 6.7 Sign Standards, is deemed a "legal nonconforming sign." A sign that presents a hazard to public safety, as determined by the City, shall be removed upon the issuance of a notice by the City. A legal nonconforming sign may continue to exist, subject to the following:
  - a. A nonconforming sign may not be altered, enlarged, extended, or moved, except in conformity with the requirements of Section 6.7 Sign Standards, or as otherwise required by law;
  - b. Where a use or a structure associated with a nonconforming sign is abandoned or discontinued, any sign associated with a new use of the site shall be in full conformity with the requirements of Section 6.7 Sign Standards.
- 6. Nonconforming to Development Standards. The development that is not in compliance with the site development standards prescribed by the regulations of the zoning district in which the lot or parcel is located, including area, coverage, configuration, dimensions, parking, landscaping, screen walls, fences and enclosure trash receptacles, is deemed "legal nonconforming," provided such development was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A development that is nonconforming as to landscaping, screen walls, fences and enclosure of trash receptacles, shall be altered to comply with the district regulations covering the following standards, or as a condition of any subsequent Development Plan or Conditional Use Permit approval.
- 7. Nonconforming Lots. A lot or parcel that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area and configuration is deemed a "legal nonconforming lot," provided such lot or parcel was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.

- a. A lot or parcel that is nonconforming as to minimum area or dimension shall be granted all development rights and uses of the land use district within which it is located.
  - i. The landscaping of setback areas insofar as a setback exists;
  - ii. The landscaping of parking areas, provided fulfilling the requirement does not reduce off-street parking or loading spaces to fewer than prescribed in this Specific Plan;
  - iii. The screening of storage areas; and
  - iv. The enclosure of trash receptacles.
- 8. Elimination of Nonconforming Adult Business Uses. Nonconforming adult business uses shall be eliminated in compliance with Municipal Code Chapter 30 Zoning and Development Code.
- 9. Abatement of Nonconforming Uses, Structures, Lots and Signs. Whenever a use, structure, site or sign becomes nonconforming because of a change of land use district boundaries or a change of the regulations prescribed for the district in which the site is located, the period of time prescribed in this Specific Plan for the abatement period for the elimination of the use, the removal of the structure or sign, or the improvement of the lot or parcel shall begin on the effective date of the change of district boundaries or regulations.

### **7.1 Purpose**

The Jurupa North Research and Development District (JND) is intended to encourage small business development by allowing a mixture of development types and uses including light industrial, warehousing, logistics-based distribution, office, flex tech, research and development, and service commercial. In addition to industrial uses, this area will promote the development of community serving commercial uses, such as grocery stores, restaurants, dry cleaners, and gas stations. Adjacent existing residential and public facilities uses are buffered from potential adverse impacts of these higher intensity uses. General features of this District include:

- Landscape/Streetscape Enhancement
- Promotion of lot consolidation
- Promotion of the development of office, low intensity industrial, and flex tech uses
- Establishment of uses that capitalize on regional market potential
- Development that is compatible with surrounding residential development
- Encouragement of green technology and research and development-oriented uses
- Emphasize mixed use developments

## **7.2 Applicability**

### **A. Projects Subject to Development Regulations**

This Chapter contains the development regulations that govern all future private development actions in the JND, including new construction, additions or renovations to existing structures and/or new land uses proposed for existing facilities.

### **B. Right of Continued Use**

This Chapter shall not require any change in any existing building or structure for which a building permit has been previously issued, or for approved plans on file in the Community Development Department before the effective date of this Specific Plan. Changes in the property's ownership or tenants of legal existing uses shall likewise require no change in any existing building or structure. Nonconforming standards and provisions shall be governed by Section 7.11 Entitlement Procedures.

### **C. Other Requirements**

This Chapter does not eliminate the need for obtaining any other permits required by the City, or any permit, approval or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.

### **D. Types of Development Regulations**

The development regulations are of two types – Standards and Guidelines – as follows:

1. Standards address those aspects of development that are essential to achieve the goals of the Specific Plan. They include specifications for allowable land uses and site development (e.g., building height, setbacks, etc.). Conformance with Standards is mandatory. Standards are indicated by use of the words "shall," "must," or "is / is not permitted."
2. Guidelines provide guidance for new development in terms of aesthetics and design details. They are intended to direct building and site design in a way that results in the desired character for the JND. Whereas conformance with the Standards is mandatory, conformance with the Guidelines is preferred and/or recommended. Provisions that fall into this category are indicated by the use of the words "should," "may" or "are encouraged to." In various cases, the Guidelines provide a choice of treatments that will achieve the desired effect. Developers are permitted to propose alternative design details if they are able to show that such details implement the Specific Plan objectives with respect to the desired character of the JND.

### **E. Minimum Requirements**

The provisions in this Chapter shall be minimum requirements. When this Chapter provides for discretionary authority on the part of the Director of Community Development, Planning Commission, or City Council, that discretion may be exercised to impose more stringent requirements if deemed necessary to accomplish the overall objectives of the JND.

### **F. Overview of Development Regulations**

1. Relationship of Land Use Districts. The development regulations in this Chapter apply to those properties that are within the JND. Exhibit 7-1 – Land Use Plan indicates the location of the JND and its relationship to the other land use districts in the Specific Plan area.
2. Standards, Guidelines, and Procedures. The development regulations are divided into the following sections: 7.3 Allowable Land Uses and Permit Requirements; 7.4 Development Standards; 7.5 Landscape Standards; 7.6 Parking and Loading Standards; 7.7 Sign Standards; 7.8 Public Right-of-Way Streetscape; 7.9 Design Guidelines; 7.10 Development Incentives; and 7.11 Entitlement Procedures. Projects must meet all development standards in order to achieve approval in the development review process. Projects are encouraged to adhere to the guidelines contained in 7.9 Design Guidelines.
3. Steps for Using Chapter. Table 7-1 – Process Procedures describes the steps for using this Chapter.

| <b>Table 7-1 – Process Procedures</b>                                                                                       |                                                          |                                      |
|-----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|--------------------------------------|
| <i>Instructions</i>                                                                                                         | <i>Information Source</i>                                | <i>Where to Find in this Chapter</i> |
| Locate property and its street frontage                                                                                     | Land Use Plan                                            | Exhibit 7-1                          |
| Identify the allowable uses and refer to the definitions of the uses                                                        | Allowable Land Uses & Permit Requirements Definitions    | Table 7-2<br>Appendix A              |
| Comply with the requirements for intensity, lot dimensions, height limits, and setbacks                                     | Intensity and Dimensional Standards                      | Table 7-3                            |
| Comply with fence, wall, and screening standards                                                                            | Fence, Wall, and Screening Standards                     | Table 7-4                            |
| Comply with landscaping requirements                                                                                        | Landscaping Standards<br>Public Right-of-Way Streetscape | Section 7.5<br>Section 7.8           |
| Comply with parking requirements                                                                                            | Parking and Loading Standards                            | Section 7.6                          |
| Comply with sign requirements                                                                                               | Sign Standards                                           | Section 7.7                          |
| Review the design guidelines for preferred site layout, building orientation and architectural detail, fencing, and parking | Design Guidelines                                        | Section 7.9                          |
| Determine if development is eligible for incentives                                                                         | Development Incentives                                   | Section 7.10                         |
| Submit project application and proceed through project approval process                                                     | Entitlement Procedures                                   | Section 7.11                         |

# Southwest Industrial Park Specific Plan

Jurupa North Research and Development District

Exhibit 7-1 – Land Use Plan

### **7.3 Allowable Land Uses and Permit Requirements**

This Section identifies allowable land uses and their permit requirements.

#### **A. Allowed Uses**

Table 7-2 – Allowable Land Uses and Permit Requirements identifies the types of land uses allowed in the JND and the permit required to establish each use.

#### **B. Uses Not Listed**

Uses not listed in Table 7-2 are prohibited land uses, until and unless the Director of Community Development makes a similar use determination in compliance with Subsection 7.11.C Entitlement Procedures - Similar Use Determination.

#### **C. Other Applicable Regulations**

The provisions contained in this SWIP Specific Plan constitute the primary land use and development standards for the Specific Plan area. These regulations are in addition to the provisions in the City of Fontana Municipal Code.

This Specific Plan provides all development standards and guidelines necessary to approve subsequent project applications, unless otherwise noted. Permit processing procedures (e.g., noticing, hearing, appeals, and expiration procedures) and enforcement procedures are provided in Municipal Code Chapter 30 (Zoning and Development Code) shall apply, unless otherwise noted. Where there is a conflict between the provisions in this Specific Plan and those in the Zoning and Development Code, the Specific Plan provisions shall prevail to the extent allowable under Federal or State law. Where there is no conflict, both shall be applied concurrently.

#### **D. Definitions**

Definitions for land uses are provided in Appendix A Definitions. If a definition is not provided, the definitions in the Municipal Code shall apply. The Director of Community Development shall interpret the definitions; make a similar use determination in compliance with Subsection 7.11.C Entitlement Procedures – Similar Use Determination; and/or refer any questions to the Planning Commission for its determination. For the purposes of this Specific Plan, the following definitions shall apply:

1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
2. Industrial Use: Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

| Table 7-2 – Allowable Land Uses and Permit Requirements   |                                                                                                          |
|-----------------------------------------------------------|----------------------------------------------------------------------------------------------------------|
| Land Use                                                  | Permit Requirement                                                                                       |
|                                                           | "P" = Use Permitted by Right<br>"C" = Conditional Use Permit Required<br>"M" = Minor Use Permit Required |
|                                                           | Jurupa North Research and Development District (JND)                                                     |
| <b>Entertainment, Recreation and Public Assembly Uses</b> |                                                                                                          |
| Adult Businesses                                          | Refer to Municipal Code §30-11 & Municipal Code Chapter 15, Article XVIII                                |
| Open Space / Park                                         | P                                                                                                        |
| Public Assembly Facilities                                | C                                                                                                        |

## 7.4 Development Standards

New land uses and structures and alterations to existing land uses and structures in the JND shall be designed, constructed, and established in compliance with the requirements in this Section.

### A. Intensity and Dimensional Standards

Table 7-3 – Intensity and Dimensional Standards provides the required intensity and dimensional standards for proposed development. The Director of Community Development is authorized to approve modifications of 10 percent or less of any land use district setback, lot width, lot depth, building coverage, building height, or wall height standard in compliance with the administrative variance procedures in Municipal Code Section 30-51.6 (Findings necessary for granting a variance). See Exhibit 7-2 – Dimensional Standards.

The Director of Community Development may grant an administrative variance from the requirements of this chapter where practical difficulties, unnecessary hardships, or results contrary to the intent of this chapter would occur from the strict and literal interpretation and enforcement of the Code. An administrative variance may be granted upon conditions which will ensure the protection of the public safety, health and welfare. To grant an administrative variance, the Director of Community Development must find from the facts presented that the following conditions exist.

- (1) That because of circumstances applicable to the property including size, shape, topography, location or surroundings, the strict application of this chapter will deprive the property of privileges enjoyed by other property in the vicinity and under identical zoning classification;
- (2) That the granting of such an administrative variance will be subject to conditions assuring that the variance shall not constitute a grant of special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district in which the property is located;
- (3) That the administrative variance does not authorize a use or activity which is not a specifically allowed use in the zoning district in which the property is located; and
- (4) That the granting of one administrative variance will not be contrary to the general plan.

Table 7-3 – Intensity and Dimensional Standards

| Lot Size and Building Placement                                                                                                                                           |                                                     |                                                                                                           |

| Interior (Floor-to-Floor, excluding parking levels)                                                                                                                       | Ground floor – 12 ft min                            | Ground floor – 12 ft min                                                                                  |
| <b>UPPER STORY STEPBACKS</b>                                                                                                                                              |                                                     |                                                                                                           |
| All buildings regardless of street frontage                                                                                                                               | Allowed.                                            | Allowed.                                                                                                  |
| Adjacent to Major Highways (Cherry and Jurupa) and residential zones for buildings that have a front setback of between 15 and 30 feet from the public right-of-way line. |                                                     | Required: 15-foot upper-story setback for part of buildings above 30 feet from finished grade (H) (I) (J) |

Notes:

- (1) Setback is measured from public right-of-way line.
- (2) Setback is measured from property line.
- (3) See Section 7-10 Development Incentives
- (4) Lots in commercial center may have a minimum lot size less than 40,000 square feet.
- (5) Corner cut off setbacks per Specific Plan.

**B. Fences, Walls, and Screening**

1. Standards and Guidelines. Table 7-4 – Standards for Fences, Walls, and Screening contains standards for fences, walls, and screening. Refer to Section 7.9 Design Guidelines for guidelines about the design, materials, and construction of fences, walls, and screening.

**Table 7-4 – Standards for Fences, Walls, and Screening**

| <i>Location</i>                                                                             | <i>Materials<br/>See Section 7.9 Design Guidelines</i>                                                                                                         | <i>Maximum Height (1)</i>                                                                                 |
|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Within front setback area                                                                   | Solid fencing/wall                                                                                                                                             | 36 inches                                                                                                 |
|                                                                                             | Open fencing/wall                                                                                                                                              | 6 ft                                                                                                      |
| Within street side setback area                                                             | Tubular steel construction allowed in required setback area if set back at least 15 ft from lot line. Solid masonry wall not allowed in required setback area. | 8 ft if necessary for security purposes, with 18-inch maximum width pilasters a minimum of 8 ft on center |
| Within interior side setback area                                                           | Any type of fence, hedge, or wall allowed, except that if abutting Public Facility District or railroad right-of-way, solid masonry wall only                  | 8 ft                                                                                                      |
| Within rear setback area                                                                    | Any type of fence, hedge, or wall allowed, except that if abutting Public Facility District or railroad right-of-way, solid masonry wall only                  | 8 ft                                                                                                      |
| Outside of a required setback area                                                          | Solid or open fencing/wall                                                                                                                                     | No height limit                                                                                           |
| Screening of outside storage materials and equipment from view from the public right-of-way | Solid fencing/wall                                                                                                                                             | 8 ft                                                                                                      |
| At intersections of alleys, streets, and driveways                                          | All materials, including solid/open fencing and walls                                                                                                          | 30 inches                                                                                                 |

Note: (1) All fences and walls shall meet the City's line of sight regulations, as determined by the City Engineer.

2. Materials

- a. Open fencing shall mean fencing with over 50 percent of the surface area open for free passage of light and air and through which the area behind the fence is visible to public view. See Exhibit 7-3 – Open and Solid Fencing.
- b. Solid fencing shall mean fencing with 50 percent or less of the surface area open for free passage of light and air and designed to conceal the area behind the fence from public view. See Exhibit 7-3 – Open and Solid Fencing.
- c. Barbed wire fence, electric fences, or similar fencing material is prohibited.
- d. Chain link fencing is allowed on interior property lines that are not visible from public rights-of-way.

*Examples of Solid Fencing*

Exhibit 7-3 – Open and Solid Fencing.

3. Screening and buffering

- a. Roof-mounted and ground-mounted mechanical equipment, utilities, storage, and solid waste storage areas shall be screened from adjoining properties and public right-of-ways by a visual barrier (e.g., wall, fence, landscape material, etc.) to the satisfaction of the Director of Community Development. Where only landscaping is used for screening, it shall be planted with five-gallon (minimum size) shrubs spaced to provide a continuous dense screen.
- b. Parking lot perimeters shall be screened and planted in compliance with Section 7.6 Parking and Loading Standards.

**C. Outdoor Activities and Storage**

1. Storage in Setback Areas. Material or equipment shall not be stored anywhere in the front yard. Temporary storage of construction materials during construction on the same site is permitted. Boats, campers, motor vehicles, trailers, equipment, materials, or antenna may be stored in side and rear yards, provided that they are outside the required side and rear setback areas identified in Table 7-3 – Intensity and Dimensional Standards.
2. Limitations on Outdoor Uses.
  - a. All uses shall be conducted entirely within a completely enclosed building that is attached to a permanent foundation, except approved outdoor dining areas, vehicle sales and rental businesses, parking areas, nursery growing areas, industrial activities, and other approved uses that require outdoor activities.
  - b. Areas used for the approved outdoor storage of vehicles, equipment and/or building materials (raw or finished) may use compacted slag, gravel, or other similar material deemed suitable by the Director of Community Development.
3. Outdoor Wholesaling. Outdoor wholesaling of goods and materials shall comply with the following:
  - a. A building shall be provided on the same parcel or on an adjacent parcel associated with the same business.
  - b. All display materials, including vehicles, shall be set back five feet from any landscaped area and shall not be located on required parking areas.
  - c. The entire area used for display purposes shall be surfaced with asphalt or an equally serviceable hard pavement surface. The surface shall be maintained in good condition.

- d. Storage of equipment or materials, with the exception of the display of vehicles for sale or rent, shall be screened by a visually solid masonry wall of minimum height six feet. The approving authority may determine through the design review process that the subject use requires a solid masonry wall higher than six feet.
- e. Outdoor display areas shall be maintained in a neat and orderly condition.

***D. Caretaker Housing***

Caretaker housing shall be:

- 1. Accessory to a principal use;
- 2. A maximum of 1,500 square feet total floor area unless otherwise approved by the Planning Commission;
- 3. Limited to one unit per lot; and
- 4. Subject to the setback requirements applicable to the principal structure with which it is associated.

***E. Solar Access***

A structure, fence, or wall shall not be constructed or modified, and vegetation shall not be placed or allowed to grow so as to obstruct more than 10 percent of the absorption area of a solar energy system on an abutting or adjacent lot at any time.

***F. Undergrounding of Utilities***

- 1. Utility service laterals to new development shall be installed underground.
- 2. Temporary overhead power and telephone facilities are permitted only during construction.
- 3. Placement, location and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.
- 4. Transformer enclosures shall be designed of durable materials with finishes and colors used that are compatible and harmonious with the overall architectural theme.
- 5. All utilities including, but not limited to drainage systems, sewers, gas lines, water lines, and electrical, telephone, and communications wires and equipment shall be installed and maintained underground. Placement, location, and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.

## 7.5 Landscape Standards

### A. Required Landscaping

This section provides the required minimum standards for all landscaped areas within any new and rehabilitated development.

1. Landscaped area means the entire parcel less the building footprint, driveways, nonirrigated portions of parking lots, and hardscapes (driveways, approaches, sidewalks, etc.). Decorative hardscapes used to enhance the landscape will be considered as part of the landscape area; this would include such things as cobble rock, decomposed granite, brickwork, stamped concrete, gravel, pavers, and water features.
2. Landscape setbacks along public right-of-ways shall incorporate landscape buffers with undulating and variable height earth-mounding (berms), and/or low walls, and required plant materials as shown in Table 7-5 – Landscape Standards.
3. Block wall and wrought iron fencing shall be located behind landscape setback area(s).
4. The developer shall submit to the City's Department of Engineering, a Landscape Documentation Package that conforms to the Water Efficient Landscape Ordinance, specified in the Municipal Code, Chapter 28 Vegetation.
5. All new development landscaping shall comply with the standards shown in Table 7-5 – Landscape Standards. Additional guidelines that should be considered are addressed in Section 7.10 Design Guidelines.
6. The Recommended Plant Materials Palette, Table 7-6 can be found immediately after this section. The plant materials palette is provided to ensure the installation of drought-tolerant, water efficient landscaping that will provide wind breaks and thrive in the local climate conditions. In an effort to provide visual elements that distinguish this district from others, please note that turf (grass) does not appear in the Plant Materials Palette, and shall be prohibited, in lieu of drought-tolerant ground covers.
7. Public right-of-way improvements, including street improvements, streetscape/landscape (parkway) improvements, and street tree requirements, are in Section 7.8 – Public Right-of-Way Streetscape.

Notes: (1) The Director of Community Development may require additional setbacks.

**B. Recommended Plant Materials Palette**

The Recommended Plant Materials Palette in Table 7-6 provides a listing of primarily drought-tolerant trees, shrubs, and ground covers to provide water-efficient landscaping in new projects. The limited selection of landscape material in the palette is envisioned to assist the user in incorporating sustainable landscaping into the project, while including enough variety of size, form, and density, to meet the requirements within buffer setbacks and screening techniques. Final selection shall be approved the City. The Director of Community Development shall approve artificial turf.

**Rosea Ice Plant**  
*Drosanthemum  
floribundum*

## 7.6 *Parking and Loading Standards*

### **A. *Applicability***

This section contains regulations for off-street parking and loading. Regulations identify required number of parking and loading spaces for all new development projects and those proposing substantial modification to existing buildings. Please refer to Municipal Code Chapter 30 Zoning and Development Code for all parking and loading-related information or regulations not specifically addressed in this section.

### **B. *General Parking and Loading Regulations***

1. Methods of Calculation.
  - a. Multiple Uses. If more than one use is located on a site, the total number of required off-street parking and loading spaces shall be the sum of the requirements for the various uses computed separately. If individual uses on the same site have a floor area less than that for which loading spaces would be required, then the total gross floor area of all uses on the site or lot shall be used in determining the required number of loading spaces.
  - b. Fractional Number. Whenever the computation of the required number of off-street parking or loading spaces results in a fractional number, one additional space shall be required for a fraction of more than one-half, but shall not be required for a fraction of one-half or less.
2. Off-Site Location. Required off-street parking spaces shall be located on the same property as the use that they are intended to serve. Where the required parking spaces cannot be accommodated on the same property, they may be located in a separate off-site parking facility that is not more than 300 feet from the use(s) they serve.
3. Shared Use. Required off-street parking and loading spaces shall not be considered as providing parking or loading spaces for any other use, except where shared use facilities are approved in compliance with Subparagraph 5 Adjustments to Parking Requirements, below.
4. Uses Not Specified. For uses not specified, the Director of Community Development shall determine parking requirements based upon the requirements of the most similar use. See Subsection 7.11.C Entitlement Procedures - Similar Use Determination.
5. Adjustments to Parking Requirements.
  - a. Administrative Variance. The Director of Community Development is authorized to approve alternate parking plans involving a modification of 10 percent or less of any of the off-street parking and loading standards in compliance with Section 30-51.5 of Municipal Code Chapter 30.
  - b. Parking Study Option. An applicant may submit a separate parking and loading study for new development to the Director of Community Development for review

and approval. A parking and loading study shall provide sufficient data and information to justify the need for adjustments to the parking and loading requirements and shall analyze whether:

- i. Adequate off-street parking will be provided for the project;
  - ii. The project demonstrates the use of creative design concepts, including but not limited to shared parking facilities, transit accessibility, pedestrian amenities, and bicycle amenities;
  - iii. Environmental impacts associated with the project will not be increased by the modification of standards; and
  - iv. Traffic safety and pedestrian safety will be enhanced by the modifications.
- c. Shared Use Facility. Required off-street parking and loading spaces may be considered as providing parking or loading spaces for another use where joint facilities serving more than one use contain no less than the total number of spaces deemed necessary for each individual use added together with other uses. Where adjoining uses on the same site have different hours of operation with minimal conflict, the Director of Community Development may determine that some or all of the same spaces may be counted as satisfying the requirements for both uses, provided that the number of spaces shall not be less than the prescribed for the use requiring the greater number.

### ***C. Required Number of Parking Spaces***

Each land use shall provide the number of off-street parking spaces indicated in Table 7-7 – Parking Requirements by Land Use, except where adjustment has been granted in compliance with Subparagraph 7.6.B.5 Adjustments to Parking Requirements, above. For the purposes of this Section, the following definitions shall apply:

- 1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
- 2. Industrial Use: Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

#### **D. Required Number of Loading Spaces**

Each land use shall provide the number of off-street loading spaces indicated in Table 7-8 – Loading Space Requirements by Land Use. Requirements for uses not specifically listed shall be determined by the Director of Community Development based upon the requirements for comparable uses and upon the particular characteristics of the proposed use. For other standards (e.g., size of loading spaces, location, turning radius, etc.), refer to Article XI Off-Street Parking and Loading Standards, Division 4 Loading Area Regulations, in Municipal Code Chapter 30 Zoning and Development Code

## Southwest Industrial Park Specific Plan

Jurupa North Research and Development District

| Table 7-8 – Loading Space Requirements by Land Use                           |                                                                                                                                                                                         |                     |
|------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Land Use                                                                     | Loading Spaces (Minimum #)                                                                                                                                                              | Type                |

**Table 7-8 – Loading Space Requirements by Land Use (continued)**

| <b>Land Use</b>                                       |                                                                                           |                        |
|-------------------------------------------------------|-------------------------------------------------------------------------------------------|------------------------|
|                                                       | <i>Loading Spaces (Minimum #)</i>                                                         | <i>Type</i>            |
| School, Commercial                                    | 1 space; and additional spaces required by design review                                  | Van (1)                |
| <b>Distribution, Wholesaling and Warehousing Uses</b> |                                                                                           |                        |
| Warehousing Facilities                                | 5,000 - 30,000 sq ft: 1 space; and<br>1 additional space for each additional 30,000 sq ft | Tractor Trailer<br>(3) |

**Notes:**

- (1) A van loading space shall be a minimum of 12 ft wide by 19 ft long with a minimum 10 ft overhead clearance.
- (2) A truck loading space shall be a minimum of 12 ft wide by 45 ft long with a minimum 14 ft overhead clearance.
- (3) A tractor trailer loading space shall be a minimum of 12 ft wide by 70 ft long with a minimum 14 ft overhead clearance.

**E. Landscaping Standards for Parking Areas**

Within any parking area, one tree shall be planted for every five single-row parking stalls or 10 double-row parking stalls. Eighty percent of these shall be 15 gallons in size and the remaining 20 percent shall be 24-inch box or larger in size. If for some reason the contractor is unable to distribute trees in the interior of the parking area in compliance with these standards, the Director of Community Development may approve the placement of no more than 40 percent of the trees within the perimeter of the parking area. Planters shall not have a dimension less than four feet, excluding the thickness of the curbing. These requirements may be reduced for industrial parking areas that are screened from public view.

1. Parking areas shall contain a minimum landscape area equivalent to 30 percent of the total required 15 percent landscaping for the total site area.
2. Parking area perimeter landscaping.
  - a. Parking areas for nonresidential uses abutting or adjacent to residentially zoned property shall provide a landscape strip that is a minimum of 10 feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line bordering the residentially zoned property. Parking areas shall be screened from the residentially zoned property by a solid decorative masonry wall that is a minimum of six feet in height.
  - b. Parking areas for nonresidential uses abutting or adjacent to non-residentially zoned property or a street shall install a landscape strip that is a minimum of five feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line or the parking area and the street right-of-way. This requirement may be reduced or modified if a joint access agreement exists that is satisfactory to the Director of Community Development. Parking areas shall be screened from streets through combinations of plant materials, earth berms, raised planters, grade separations, or low walls. Slopes shall not exceed three to one or exceed 36 inches in height measured from the parking lot surface.
  - c. Plant materials, walls, or structures within a traffic sight area shall not block sight lines from driveways to streets and shall not exceed 36 inches in height.

- d. The minimum width of a landscape finger shall be five (5) feet.
  - e. End of aisle spaces adjacent to landscape finger shall be two feet wider for step out area.
3. Parking area interior landscaping.
- a. Tree number and location. One tree shall be provided for each four parking spaces and shall be evenly spaced throughout the interior parking area at a rate of one tree for every eight parking spaces. See Exhibit 7-4 – Parking Lot Landscaping. The required number of trees in the interior area shall not include trees required around the parking area perimeter. Trees are not required for tractor-trailer parking. A minimum of one cluster of trees shall be provided for each 100 feet of a row or double row of parking spaces. Trees shall be located in planters that are bounded on at least two sides by parking area paving. Planters shall have a minimum exterior dimension of five feet.

Exhibit 7-4 – Parking Lot Landscaping

- b. Tree size. All trees within the parking area shall be a minimum 24-inch box container at time of planting.
- c. Landscape protection. Landscaping shall be protected by concrete curbs of at least six inches in height. An end-of-aisle planter shall be provided at the ends of all parking aisles. Finger aisle planters shall be a minimum of nine feet wide and end-of-aisle planters shall be a minimum of seven feet wide, as measured from the inside of the curb. The parking space side of finger and end-of-aisle planters shall have a 24-inch wide concrete surface measured from the face of the curb. Planters shall be landscaped with a mixture of trees, shrubs, and ground cover. Planting areas shall have round corners instead of 90 degree corners and shall be shaped to allow vehicle movements. The Director of Community Development may approve alternative barriers designed to protect landscaped areas from vehicle damage. Wheel stops may be placed to allow for two feet of vehicle overhang area within the dimension of the parking space. To increase the parking lot landscaped area, a maximum of two feet of the parking stall depth may be landscaped with low-growth, hardy materials in-lieu of paving, allowing a bumper overhang while maintaining the required parking dimensions. However, the overhang area shall not be counted as part of the minimum landscape area required by paragraph (1) above, and when adjacent to a required landscaping strip shall be in addition to the

- minimum required width. Fixtures (e.g., lights, sprinklers) that are higher than the curb are prohibited within a bumper overhang area. Curbing that creates a bumper overhang barrier shall not exceed a height of five inches.
- d. Parking areas with more than 100 spaces shall provide an appropriate entry feature consisting of a concentration of landscape elements, including trees, flowering plants, enhanced paving, and project identification.
4. Parking structures. A landscaping strip 10 feet wide shall be provided on all sides of a parking structure. One tree shall be provided for each 20 to 40 feet of perimeter of the structure, based on species selected. These trees shall be distributed evenly throughout the subject landscape area.

## 7.7 Sign Standards

### A. Applicability

This section contains standards and guidelines for signage to ensure that signs are consistent with the overall quality and character of anticipated new development. Regulations identify permitted sign types; provide standards for number of signs, size, and location; and provide design guidelines for color, materials, and illumination. Please refer to the Fontana Municipal Code for all sign-related information or regulations not specifically addressed in this section.

### B. Standards and Guidelines

1. Standards. The following standards shall apply to all signs, regardless of type:
  - a. Sign types not listed in this Section are not permitted.
  - b. Linear Frontage Ratio. For each establishment, one and one-half (1 ½) square feet of total sign area shall be allowed for each linear foot of building frontage ("Linear Frontage Ratio"). Unless otherwise noted, all signs (including temporary signs) shall count toward the total sign area permitted based on the Linear Frontage Ratio. For multi-tenant buildings, each establishment shall be calculated individually. For corner establishments, each facade shall be calculated individually. Permitted sign area based on the linear frontage of one establishment or facade shall not be placed on another establishment or facade.
  - c. Signs shall not be animated.
  - d. Commercial messages that identify, advertise, or attract attention to a business, product, service, or event or activity sold, existing, or offered elsewhere than upon the same property where the sign is displayed are expressly prohibited.
  - e. In the event of a conflict between this Section and any other City regulation, the provisions of this Section shall apply.
  - f. All issues not specifically addressed herein (e.g., signage in the public right-of-way, exempt signs, permit processing, etc.) shall be addressed pursuant to the Fontana Municipal Code.
2. Guidelines. The following guidelines shall apply to all signs, regardless of type.
  - a. Design Compatibility
    - Provide signage that is compatible with the building architecture and coordinate sign materials and colors with the building facade/storefront design.
    - Place signs in accordance with facade rhythm, scale, and proportion.
    - Ensure that signs associated with multi-tenant buildings are complementary to one another. A consistent location for tenant identification signs is recommended.

b. Location

- Signs shall be placed at or near the public entrance to a building or main parking area to indicate the most direct access to the business.
- Signs shall not be located so that they cover or interrupt the architectural details or ornamentation of a building's facade.
- Signs shall not project above the edge of the rooflines and shall not obstruct windows and/or doorways.

c. Sign Legibility

- Avoid hard-to-read, intricate typefaces. Typefaces that are difficult to read reduce the sign's ability to communicate.
- Avoid spacing letters and words too close together. Lettering shall not occupy more than 75 percent of the sign face.
- Limit the number of lettering styles in order to increase legibility. Signs shall be limited to no more than two styles for small signs (generally up to 10 square feet) and three styles for larger signs.
- Use significant contrast through incorporating light colored letters and a darker, contrasting background to provide the most visible and best-looking image.
- Incorporate business identity symbols and logos.
- Logo means any symbol or any combination thereof adopted and used by an individual or corporation to identify goods made or sold or services rendered by an individual or corporation and to distinguish them from goods made or sold or services rendered by others and that is nationally or State of California registered.

d. Color and Materials

- Bright day-glo (fluorescent) colors shall be avoided as they are distracting and do not blend well with other background colors.
- Sign colors shall relate to and complement the materials or color scheme of the buildings, including accent and trim colors.
- Sign materials shall be selected with consideration for the architectural design of the building's façade and also contribute to the legibility of the sign.
- Construct signs of durable, high-quality materials.
- Wood, paper and cloth signs, and painted wall signs are prohibited.

e. Illumination

- Individually illuminated letters, either internally illuminated or back-lighted solid letters (reverse channel), are a preferred alternative to internally illuminated plastic-faced cabinet signs.
- Signs shall be comprised of individual letters.
- The use of backlit, individually cut letter signs is strongly encouraged for all types of business and signs, including monument-type signs.
- Whenever indirect lighting fixtures are used, care shall be taken to properly shield the light source.

## f. Electrical Raceways and Conduits

- Electrical transformer boxes and raceways shall be concealed from public view.
- All exposed conduit and junction boxes shall be appropriately concealed from public view.

**C. Sign Types**

For the purposes of this plan, Table 7-9 – Sign Types indicates the signs that are allowed in the Jurupa North Research and Development District.

| Table 7-9 – Sign Types |                                                                                                               |
|------------------------|---------------------------------------------------------------------------------------------------------------|
| 1                      | <b>Grand Projecting Sign</b><br>Hotels, movie theaters, live performance theaters                             |
| 2                      | <b>Marquee Sign</b><br>Movie theaters and live performance theaters with a capacity of 500 persons or greater |
| 3                      | <b>Grand Wall Sign</b><br>Non-residential uses with unfenestrated wall areas of 2,000 square feet or greater  |
| 4                      | <b>Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                               |
| 5                      | <b>Projecting Sign</b><br>Non-residential uses with a dedicated ground floor entrance                         |
| 6                      | <b>Awning Valance Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 7                      | <b>Awning Side Sign</b><br>Non-residential uses with a dedicated ground floor entrance                        |
| 8                      | <b>Canopy Fascia Sign</b><br>Non-residential uses with a dedicated ground floor entrance                      |
| 9                      | <b>Under-Awning or Under-Canopy Sign</b><br>Non-residential uses with a dedicated ground floor entrance       |
| 10                     | <b>Recessed Entry Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 11                     | <b>Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                             |
| 12                     | <b>Temporary Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                   |
| 13                     | <b>Temporary Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 14                     | <b>Monument Sign</b><br>Any building with continuous linear street frontage of 200 feet or greater            |
| 15                     | <b>Directional Sign</b><br>Each vehicle entrance                                                              |
| 16                     | <b>Accessory Sign</b><br>Identified specific uses                                                             |

## **D. Sign Type Standards and Guidelines**

This section provides Standards and Guidelines for each Sign Type.

### **1. Grand Projecting Sign**

Grand Projecting Signs are tall, large, vertically-oriented signs that project from the building perpendicular to the façade and that are structurally integrated into the building.

#### **a. Standards**

- i. Only one (1) Grand Projecting Sign shall be permitted per establishment.
- ii. The Grand Projecting Sign areas shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iii. Grand Projecting Signs shall be no taller than 30 feet from the bottom-most part of the sign to the tallest part of the sign.
- iv. Grand Projecting Signs shall project no more than six feet from the façade of the building.
- v. No portion of a Grand Projecting Sign shall be lower than 12 feet above the level of the walkway over which it projects.
- vi. Letter width shall not exceed two-thirds (2/3) of the sign width.
- vii. No portion of a Grand Projecting Sign shall extend more than 10 feet above the roofline.

#### **b. Commercial Guidelines**

- i. Materials used in Grand Projecting Signs shall be metal and paint only.
- ii. Grand Projecting Signs may be illuminated.
- iii. Letters shall be oriented right-side-up and stacked in a single upright row with the first letter being at the top of the sign and the last letter being at the bottom.

1) Grand Projecting Sign.

## 2. **Grand Wall Sign**

Grand Wall Signs are large signs located on, and parallel to, large unfenestrated building wall areas.

### a. Standards

- i. A Grand Wall Sign shall only be located on unfenestrated wall areas of 2,000 square feet in size or greater.
- ii. Only one (1) Grand Wall Sign shall be permitted per establishment.
- iii. The Grand Wall Sign area shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. A Grand Wall Sign shall not exceed 1,000 square feet or 25 percent of the total wall area, whichever is less.
- v. Grand Wall Signs shall project no more than one (1) foot from the façade of the building.

2) Grand Wall Sign.

### b. Commercial Guidelines

- i. Materials used in Grand Wall Signs shall be wood, ceramic, or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

### c. Industrial Guidelines

- i. Materials used in Grand Wall Signs shall be ceramic or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

## 3. **Wall Sign**

Wall Signs are signs that are located on, and parallel to, a building wall. Business Identification Wall Signs are signs that announce the name of a business within a building and Building Identification Wall Signs are signs that announce the name of a building. Both are located on, and parallel to, a building wall.

### a. Standards

- i. Wall Signs shall be located below the second floor and within the middle 50 percent of the building or tenant frontage measured from lease line to lease line. Building Identification Wall Signs shall be located only on the

3) Building Identification Wall Sign.

- frieze, cornice, or fascia area of storefront level; frieze, cornice, fascia, parapet of the uppermost floor; or above the entrance to main building lobby.
- ii. No Wall Sign shall exceed 150 square feet in size. Building Identification Wall Signs shall be no taller than 24 inches in height.
- iii. Wall Signs shall count towards the total sign area permitted based on the Linear Frontage Ratio, except that the area of Building Identification Wall Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. Wall Signs shall project no more than one (1) foot from the façade of the building.

3) Business Identification Wall Sign.

b. Commercial Guidelines

- i. Materials used in wall signs shall be wood, ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. New wall signs for individual businesses in a shopping center shall be placed consistent with the location of signs for other businesses in the center. This will establish visual continuity among storefronts and create a unified appearance for the center.
- v. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

c. Industrial Guidelines

- i. Materials used in wall signs should be ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs should be inscribed into the façade or constructed of individual metal letters.
- ii. Wall signs shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only. Building

Identification Wall Signs shall be illuminated by external illumination or halo illumination only.

- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

### 4. **Projecting Sign**

Projecting Signs are signs that are oriented perpendicularly to the building façade and are either (1) suspended under a bracket, armature, or other mounting device or (2) are cantilevered (i.e., structurally affixed to the building).

- a. Standards
  - i. Projecting Signs shall only be mounted on the wall area below the second floor.
  - ii. No Projecting Sign shall exceed 16 square feet in size.
  - iii. Projecting Signs shall project no more than four feet from the façade of the building.
  - iv. No portion of a Projecting Sign shall be lower than eight feet above the level of the walkway over which it projects.
- b. Commercial and Industrial Guidelines
  - i. Projecting Signs that are suspended under a bracket, armature, or other mounting device shall be metal and paint materials only and shall be illuminated by external illumination only.
  - ii. Projecting Signs that are cantilevered signs shall be metal and paint only and shall be illuminated by external illumination or halo illumination only.
  - iii. Sign supports and brackets shall be compatible with the design and scale of the sign and the architectural design of the building.

4) Cantilevered Projecting Sign.

4) Suspended Projecting Sign.

### 5. **Awning Valance Sign**

Awning Valance Signs are signs applied to the awning valance and are contained completely within the valance.

- a. Standards
  - i. Lettering for Awning Valance Signs shall include one (1) line of lettering not to exceed two-thirds (2/3) the height of the valance or 12 inches, whichever is less.
  - ii. Awning Valance Signs shall project no farther from the building than its associated awning.
  - iii. No portion of an Awning Valance Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial and Industrial Guidelines
  - i. Awning Valance Signs shall consist of metal, or vinyl or paint applied directly to the awning.
  - ii. Awning Valance Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

5) Awning Valance Sign.

## **6. Awning Side Sign**

Awning Side Signs are signs applied to the side panel of an awning.

- a. Standards
  - i. The area of Awning Side Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - ii. Lettering for Awning Side Signs shall not exceed 12 inches in height with total sign area not to exceed 20 percent of the area of the awning side area.
  - iii. Awning Side Signs shall project no farther from the building than its associated awning.
  - iv. No portion of an Awning Side Sign shall be less than eight feet above the level of the walkway over which it projects.

6) Awning Side Sign.

- b. Commercial and Industrial Guidelines
  - i. Awning Side Signs shall consist of vinyl or paint applied directly to the awning.
  - ii. Awning Side Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

## 7. *Canopy Fascia Sign*

Canopy Fascia Signs are signs that are mounted to the front or side fascia of a canopy and contained completely within that fascia.

- a. Standards
  - i. The height of Canopy Fascia Signs shall not exceed two-thirds ( $\frac{2}{3}$ ) the height of the fascia or 12 inches, whichever is less.
  - ii. The width of Canopy Fascia Signs shall not exceed two-thirds ( $\frac{2}{3}$ ) of the canopy width.
  - iii. Canopy Fascia Signs shall project no farther from the building than its associated canopy.
  - iv. No portion of a Canopy Fascia Sign shall be less than eight feet above the level of the walkway over which it projects.
  - v. Canopy Fascia Signs shall consist of only one (1) line of lettering articulated as individual letters mounted directly to the canopy.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Canopy Fascia Signs shall be metal and paint only.
  - ii. Canopy Fascia Signs shall be illuminated by external illumination only.

7) Canopy Fascia Sign.

8) Under-Awning Sign.

## 8. *Under-Awning or Under-Canopy Sign*

Under-Awning or Under-Canopy Signs are signs that are suspended under an awning or canopy, perpendicular to the building facade.

- a. Standards
  - i. Under-Awning or Under-Canopy Signs shall be located adjacent to a public entrance.
  - ii. No more than one (1) Under-Awning or Under-Canopy Sign shall be permitted per establishment per façade.
  - iii. The area of Under-Awning or Under-Canopy Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - iv. Under-Awning or Under-Canopy Signs shall not exceed three (3) square feet in area.

8) Under-Canopy Sign.

- v. Under-Awning or Under-Canopy Signs shall project no farther from the building than its associated awning or canopy.
  - vi. No portion of an Under-Awning or Under-Canopy Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial Guidelines
- i. Materials used in Under-Awning or Under-Canopy Signs shall be wood, metal, and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
- i. Materials used in Under-Awning or Under-Canopy Signs shall be metal and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.

### 9. ***Recessed Entry Sign***

Recessed Entry Signs are signs that are oriented parallel to the building façade and that are suspended over a recessed entry.

- a. Standards
- i. No Recessed Entry Sign shall exceed twenty (20) square feet in size.
  - ii. Recessed Entry Signs shall not project beyond the façade of the building.
  - iii. No portion of a Recessed Entry Sign shall be lower than eight feet above the level of the walkway.
- b. Commercial Guidelines
- i. Materials used in Recessed Entry Signs shall be wood, metal, and paint only.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.

9) Recessed Entry Sign- Section View.

9) Recessed Entry Sign- Elevation View.

c. Industrial Guidelines

- i. Materials used in Recessed Entry Signs shall be metal and paint only.
- ii. Recessed Entry Signs shall be illuminated by external illumination only.

**10. Window Sign**

Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window.

a. Standards

- i. Window Signs shall be permitted on windows below the second floor level only. A Window Sign that only identifies a building shall be located on a transom window above a primary entrance, or the glazed area of primary door.
- ii. Window signs shall count towards total sign area permitted based on the Linear Frontage Ratio, except that the area of a Window Sign that only identifies a building shall not count towards the total sign area permitted based on the Linear Frontage Ratio. One (1) Window Sign that only identifies a building shall be permitted per building per street-facing façade.
- iii. No more than 25 percent of any individual window area shall be covered or otherwise occupied by signage.
- iv. The letter height of each Window Sign shall not exceed 12 inches and shall be taller than four inches.

10) Window Sign.

10) Building Identification Window Sign.

b. Commercial and Industrial Guidelines

- i. Ground-floor Window Signs shall consist of vinyl or paint applied to the glass, neon mounted or suspended behind the glass, or framed and mounted paper signs. Window Signs that only identify a building shall consist of vinyl or paint applied to the glass only.
- ii. Ground floor Window Signs shall not be illuminated.

**11. Temporary Window Sign**

Temporary Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window and are designed, constructed, and intended for display on private property for a period of not more than 90 consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal signage.

a. Standards

- i. Temporary Window Signs shall be located only on ground floor windows on building facades that face a public street or a parking lot.
- ii. Temporary Window Signs shall not exceed six square feet in size.
- iii. Temporary Window Signs shall not cause the total amount of the window area covered with signage to exceed 25 percent.
- iv. Temporary Window Signs that satisfy the above standards and General Standards do not require a permit.

11) Temporary Window Sign.

b. Commercial and Industrial Guidelines

- i. Temporary Window Signs shall be constructed of paint applied directly to the glass or framed paper signs placed behind the glass.
- ii. Temporary Window Signs shall not be illuminated.
- iii. Temporary Window Signs that satisfy the above guidelines and General Guidelines do not require a permit.

## 12. Temporary Wall Sign

Temporary Wall Signs are signs that are located on, and parallel to, a building wall and are designed, constructed, and intended for display on private property for a period of not more than ninety (90) consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal temporary banner signage.

### a. Standards

- i. Temporary Wall Signs shall only be mounted on a wall area below the second floor level that faces a public street or a parking lot.
- ii. A maximum of one (1) Temporary Wall Sign is allowed per establishment.
- iii. No Temporary Wall Signs shall exceed 32 square feet in area.
- iv. Temporary Wall Signs shall project no more than one (1) foot from the façade of the building.

12) Temporary Wall Sign.

### b. Commercial and Industrial Guidelines

- i. Materials used in Temporary Wall Signs shall consist of a flexible vinyl material with grommet holes installed around the edges to accommodate attachment to a building.
- ii. Temporary Wall Signs shall not be illuminated.

### 13. Monument Sign

A Monument Sign is a freestanding sign supported by a solid architectural element at its base.

a. Standards

- i. A maximum of one Monument Sign is allowed per street frontage for single-purpose buildings, multi-tenant buildings or complexes and shopping centers on a -parcel with one or more street frontages of at least 100 feet.
- ii. A Monument Sign shall not exceed eight feet in length or six feet in height.
- iii. Monument Signs shall be placed perpendicular or parallel to the street. The base of a Monument Sign shall be set back a minimum of five feet from any public right-of-way or interior property line; a minimum of 10 feet from the edge of a driveway; and a minimum of 50 feet from any Monument Signs or Pylon Signs on adjoining sites. Monument Signs shall not block sight lines at entry driveways and circulation aisles.
- iv. The sign copy for a Monument Sign shall only identify the name of the center, complex, or building and the address; however, the name of the primary tenant, if any, may be included in the copy. The minimum letter size allowed shall be six inches. Sign copy shall not be located closer than one half-letter height to the sign edge or other line of copy. Between 5 to 10 percent of the sign area should be dedicated to identification of the street address.
- v. The area of Monument Signs shall not count towards the total sign area permitted based upon Linear Frontage.
- vi. Monument Signs shall not project over any on-site driveway or vehicle circulation area.
- vii. Landscaping with automatic irrigation shall be provided at the base of the supporting structure equal to twice the area of one face of the sign or 75 square feet, whichever is greater. For example, 40 sq. ft. of sign area = 80 sq. ft. of landscaped area.

13) Monument Sign.

- b. Commercial and Industrial Guidelines
  - i. Monument Signs may be illuminated, however the sign copy should be the only portion of the sign face that is illuminated. The sign background or field shall be opaque with a nonglossy, nonreflective finish.
  - ii. The sign area and height of the sign shall be in proportion to the site and surrounding buildings. Signs shall not be overly large so as to be a dominant feature of the site.
  - iii. Monument Signs shall incorporate architectural elements, details, and articulation as follows:
    - Provide a solid architectural base that supports the sign. The base shall be a minimum of one-foot in height.
    - Provide architectural elements on the sides and top to frame the sign pane(s). Use columns, pilasters, cornices, and similar details to provide design interest.
    - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
    - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with its adjacent building(s).

#### 14. Directional Sign

A Directional Sign is an on-premise sign giving directions, instructions, or facility information of an establishment (e.g., parking signs, exit and entrance signs, etc.).

a. Standards

- i. One (1) directional sign for each vehicle entry to a site with a maximum area of three square feet per sign. Maximum sign height shall be four feet. Additional directional signs may be allowed with approval of a Comprehensive Sign Program.

b. Commercial and Industrial Guidelines

- i. Directional signs and their supports shall use the same color palette of the proposed building.
- ii. Directional signs shall be located to maintain sight lines along major circulation routes and shall be illuminated for visual clarity and safety.
- iii. Directional signs shall be designed with easy-to-read fonts, contrasting colors from the surrounding support panels, and durable materials.
- iv. Double-sided parking directional signs shall incorporate messaging and direction arrows on both sides of sign.
- v. Parking directional signage shall be used consistently throughout each individual development.

14) Directional Sign.

#### 15. Accessory Signs

Accessory Signs are signs that provide incidental information about a project site or a business and its goods or services. For the purposes of this plan, Accessory Signs include:

- Directory Sign. A sign listing the tenants or occupants of a building or building complex.
- Nameplate Sign. A sign indicating the name and/or address of a building or occupant.
- Restaurant Menu Sign. Menus displayed on the exterior premises of a restaurant.

15) Accessory Sign.

a. Standards

- i. The area of Accessory Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - ii. Directory Signs: Limited to a total sign area of 10 square feet.
  - iii. Nameplate Sign: One non-illuminated sign not to exceed one square foot in area.
- b. Commercial and Industrial Guidelines
- i. Materials used in Accessory Signs shall be wood and metal.
  - ii. Accessory Signs shall be illuminated by internal or external illumination as appropriate.

## **7.8 Public Right-of-Way Streetscape**

This section establishes standards for streetscape landscaping improvements within the public rights-of-way along the major highways, primary highways, and secondary highways as identified in the General Plan, Circulation Master Plan, as well as district gateway/intersection enhancements. The intent of these streetscape improvement concepts, and gateway enhancements is to provide a “sense of place” or identity within each district, while interweaving the standards and tree palettes that may be provided by any overriding City Master Street Tree Plan.

### **A. Street Classifications**

Streets within the JND are classified as follows:

1. Major highways:
  - a. Six-lane major highway – Cherry Avenue
  - b. Modified six-lane residential adjacent major highway – Jurupa Avenue.
  - c. Modified six-lane no median major highways – none within JND.
  - d. Eight-lane major highways – none within JND.
2. Primary highways – Beech Avenue and Mulberry Avenue.
3. Secondary highways – Citrus Avenue, Poplar Avenue, and Santa Ana Avenue.
4. Collector streets – Almond Avenue, Banana Avenue, Calabash Avenue, Catawba Avenue, Elm Avenue, Hemlock Avenue, Live Oak Avenue, and Redwood Avenue.

### **B. General Design Criteria**

The following general design criteria are intended to articulate consistent landscape treatments on similar classifications of corridors and provide a hierarchy of conceptual treatments for district gateway/intersection enhancements.

1. Landscaping should be used to accentuate and frame important view corridors.
2. Landscaping shall employ a common three-tiered approach to design:
  - a. Trees
  - b. Shrubs, vines and tall grass-like materials
  - c. Groundcovers (does not include turf)
3. Landscaping should be consistent and accentuated along arterial corridors and gateway intersections to emphasize district areas.
4. Street trees on major highways and primary highways shall consist of on-center planting of deciduous trees in medians (whenever medians are required) and evergreen trees in parkways to provide seasonal variations of views during fall and winter months (clearer air and snow-capped peaks).

5. Secondary highways shall provide single species of evergreen trees planted in parkways.
6. Gateway intersection enhancements should incorporate the adjacent property tree species (used in buffer setback) in order to provide background and screening, and be enhanced with accent trees selected for their character and shape.
7. Primary and secondary gateways will include thematic monumentation for district identification and reflect elements of local identity (i.e. river rock, concrete, City logo, etc.).
8. All gateway intersection enhancement shall incorporate decorative paving at corner areas and plant materials that promote the best of water-efficient landscaping.

**C. Streetscape Concept**

The Streetscape Concept Plan for the project area is shown on Exhibit 7-5. The plan identifies major, primary, and secondary highways, as well as collector streets and the gateway intersections within the Specific Plan area. Roadway classifications are consistent with the General Plan, Circulation Master Plan.

1. **Major Highway Streetscape.** Major highway streetscapes define the image of the City and its districts, while providing arterial linkages within and beyond the City. There are four streetscape concepts for major highways: Six-Lane Major Highway, Modified Six Lane No Median Major Highway, Modified Six Lane Residential Adjacent Major Highway, and Eight-Lane Major Highway. These major highway streetscapes are designed in response to special design needs, right-of-way, and adjacencies. Major highways within the JND are Cherry Avenue (six-lane) and Jurupa Avenue (modified six-lane residential adjacency). Streetscape cross-sections are in Exhibits 7-6, 7-7, and 7-8.
2. **Primary/Secondary Highway Streetscape.** Primary/Secondary highway streetscapes define areas within the Specific Plan and its districts, and connect to the major thoroughfares throughout the City. Primary highways within the JND are Beech Avenue and Mulberry Avenue. Secondary highways within the JND are Citrus Avenue and Poplar Avenue. Streetscape cross-sections is shown in Exhibit 7-9.

Secondary Highway - 4 Lanes (Poplar, Santa Ana and Citrus Avenues)  
\*Poplar and Santa Ana Avenues will have bike lanes.

Exhibit 7-9 – Secondary Highway – 4 Lanes – Cross Section E-E  
(Citrus Avenue, Poplar Avenue, and Santa Ana Avenue)

### 3. **Gateways**

#### **A. Concept Plan**

The Streetscape Concept Plan – Exhibit 7-10 identifies a hierarchy of primary, secondary, and tertiary gateways. The intent of the gateway intersection enhancements is to provide a visual statement that you are within the Specific Plan area.

The gateway intersection enhancements should all incorporate uniform treatments (to varying degrees) within expanded corner setback areas (45 degree diagonal right-of-way). Depending on the hierarchy level, each gateway shall include special corner/sidewalk paving, planting schemes that highlight drought tolerant species, and monumentation signage. Monument signs are optional on tertiary gateway intersections.

Each corner planting scheme shall incorporate the three-tiered planting concept, consisting of accent trees, shrubs, or tall grass-like plant material, and a ground cover. Dense planting of evergreen tree species consistent with adjacent buffer setback plantings shall provide a background/screen for each corner setback area.

Gateway conceptual designs with typical dimensions (plan views) are illustrated in Exhibits 7-10, 7-11, and 7-12. The monument sign concept as it would appear in front of the planting treatment is illustrated in Exhibit 7-13.

Gateway enhancements and monument sign enhancements shall meet the City's line of sight regulations, as determined by the City Engineer. Dimensions of monument signs shall comply with Section 7.7.D.13 Monument Sign.

#### **B. Dedication and Maintenance of Gateway Intersection Enhancements**

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for district gateway improvements in Section 7.8 Public Right-of-Way Streetscape, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the Gateway Intersection Enhancements to the standards indicated in Section 7.8 Public Right-of-Way Streetscape; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.
  - c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure the

installation and perpetual maintenance of the Gateway Intersection Enhancements.

4. Street Furniture

Exhibit 7-14 – Street Furniture Palette identifies recommended street furniture components, including lighting, trash receptacles, and benches, for the district. The palette is intended to ensure a unified visual identity for the district, which is distinct from the other districts within the Specific Plan area.

## **7.9 Design Guidelines**

### **A. Design Objectives**

The Design Guidelines will promote and reinforce the City's commitment to high quality development. In general, the guidelines are intended to ensure that development preserves or improves the positive characteristics of the City's image. The objectives of these guidelines are to:

- Promote orderly development by implementing the SWIP Specific Plan objectives, policies, and principles found in Chapter 2 Policy Framework..
- Protect and enhance property values by ensuring that development fits properly within the context of its surroundings and does not negatively impact adjacent uses.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian and motor vehicle circulation within a project and convenient pedestrian linkages to and from adjacent residential, commercial, industrial, and school areas.

### **B. Design Intent**

The design intent of the JND is to provide for high-quality, large scale industrial development that transitions to interface with the surrounding neighborhoods through smaller scale commercial uses.

### **C. Industrial, Distribution, and Business Park Uses**

The design guidelines in this Subsection shall apply to all industrial, distribution, and business park projects within this land use district.

## 1. Site Design

### Site Layout

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street.
  - Parking in front of building with a landscape buffer between parking and street. **See Figure 1.**

Figure 1. Appropriate building and landscape placement adjacent to public street

- Visitor parking may be located at the front of the building adjacent to the main entry while employee parking and service areas are located at the sides and rear of the building. **See Figure 2.**

Figure 2. Parking layout.

- Service and loading should not be located on building side(s) adjacent to a public street.
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal containers are prohibited.
- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. **See Figure 3.**

Figure 3. Appropriate location of loading areas.

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.). **See Figure 4.**
- Business park development should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

Figure 4. Open space amenities.

## 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets. **See Figure 5.**
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest. **See Figure 6.**
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between sensitive uses (i.e. schools, parks, and medical facilities) and outdoor work areas, loading, and storage.

Figure 5. Buildings are oriented to create gateway into development.

Figure 6. Buildings are oriented to provide architectural features visible from public rights-of-way.

## 3. Site Elements

### Fences and Walls

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way. **See Figure 7.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.

Figure 7. Tubular steel and stone pillars are appropriate fencing materials .

- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall.
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti. **See Figure 8.**

Figure 8. Wall is articulated with pillars and incorporates landscaping at the base and vines to deter graffiti .

### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 9.**
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from public view. **See Figure 10.**

Figure 9. Appropriate placement, orientation and screening of service areas.

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 11.**

Figure 10. Screening of roof mounted equipment.

- Trash enclosures shall integrate horizontal screening such as trellises. **See Figure 11.**

## Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets, and to prevent light spillover onto adjacent properties. **See Figure 12.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 13.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building. **See Figure 14.**
- Truck and truck trailer storage areas shall incorporate lighting to increase real and perceived security.

Figure 11. Trash enclosures with architectural screening elements.

Figure 12. Hooded light fixture directs light downward.

Figure 13. Bollard lighting along pedestrian walkway.

Figure 14. Decorative light fixtures.

## 4. Parking and Access

### Parking

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts. **See Figure 15.**
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 15.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside of the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 16.**
- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality storm water facilities consistent with City standards. **See Figure 17.**

### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts. **See Figure 18 (following page).**

Figure 15. Parking lot landscaping.

Figure 16. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 17. On-site storm water capture system.

Figure 18. Shared parking access.

- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 19.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

Enhance project entries with landscaping and special paving for visual impact.

Figure 19. Entry drive.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses (e.g. schools, etc.).
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 20.**

Figure 20. Incorporation of vertical offsets and material changes.

### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest. **See Figure 21.**
- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 22.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 23.**
- Primary building entries shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a building's entry. **See Figure 24.**

Figure 21. Façade articulation.

Figure 22. Use of cornices, window trim and grooves.

Figure 23. Enhanced corner elements.

Figure 24. Articulated Entries.

- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 25.**
- Locate and/or screen rooftop equipment so that it is not visible from the street. Rooftop screening shall be integral to the building's form.

Figure 25. Offset roof planes.

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.
- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color. **See Figure 26.**
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.

Figure 26. Use of expansion joints.

### 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) ground cover and flowering plants;
  - 2) shrubs and vines; and
  - 3) trees.

**See Figure 27.** See Recommended Plant Palette in Section 7.8.

- Special landscape features, such as specimen trees, shall be provided at major

Figure 27. Three-tiered planting system: trees, shrubs, and ground covers.

focal points (e.g., project entries, building entries, and pedestrian gathering areas).

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. Incorporation of public art is highly encouraged.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection.
- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls. Water features and public art are also encouraged. **See Figure 28.**
- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 29.**

Figure 28. Plaza area.

Figure 29. Wall incorporates landscaping to soften appearance and deter graffiti.

- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction. **See Figure 30.**

Figure 30. Plant material along buffer wall.

- Landscaping and trellises with vines are encouraged be used for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to sensitive uses shall include dense landscaping to provide visual screening and noise abatement.
- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 31.**

Figure 31. Landscaped berms.

- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area. **See Figure 32.**
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/stormwater treatment features and bioswales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 33.**
- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

Figure 32. Landscaped parking lot.

Figure 33. One site water filtration.

## D. Commercial Uses

### 1. Site Design

#### Site Layout

- The arrangement of multiple buildings and associated circulation and parking shall reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas that enhance publicly-accessible spaces. **See Figure 34.**
- Loading areas, access and circulation driveways, trash enclosures, storage areas, and rooftop equipment shall be located as far as possible from adjacent sensitive uses.
- Buildings may be located adjacent to the street with a fully landscaped setback or buildings may be set back with limited parking in front. **See Figure 35.**

#### Courtyards, and Plazas

- The organization and design of buildings shall encourage and facilitate pedestrian activity.
- Buildings should be organized to create usable open space, courtyards, plazas and dining areas. **See Figure 36.**

Figure 34. Site plan emphasizes pedestrian connectivity.

Figure 35. Limited parking adjacent to street with landscape setback.

Figure 36. Buildings create courtyard.

- Pedestrian-oriented open spaces, courtyards and plazas shall include a focal element such as a sculpture and/or water feature and sitting areas. **See Figure 37.**

### 2. Building Orientation

- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Commercial buildings on corner parcels shall establish a strong tie to both streets and should encourage pedestrian activity at corner locations. **See Figure 38.**
- Buildings associated with service retail and restaurant uses shall be pedestrian-scaled, with entries fronting onto streets, plazas or courtyards to reinforce pedestrian orientation.
- Buildings adjacent to sensitive uses (i.e. schools) shall be buffered. This may be accomplished by providing masonry walls, landscaped berms, appropriate building orientation, building height stepbacks and limitations on activities adjacent to sensitive uses. **See Figure 39.**

Figure 37. Open plaza areas with seating.

Figure 38. Commercial/retail buildings on corners should establish strong tie to the street.

Figure 39. Masonry wall and landscaping separates uses.

- Commercial and retail buildings should generally be placed at or near setback lines with developments oriented in a manner that will provide visual interest.
- Buildings should be oriented in a manner that takes advantage of passive solar design to the maximum extent feasible.

### 3. Site Elements

#### Fences and Walls

- Wall heights and surfaces shall be articulated with varying façade depths or pilasters to promote architectural interest, and may include a cap along the top of the wall. **See Figure 40.**
- Walls visible from public streets shall be decorative and complement the design of on-site buildings.
- Wall and fencing materials may consist of brick, stone, stucco, wrought iron or tubular steel. Wall and fencing colors should match building colors, with neutral earth tones. **See Figure 41.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

Figure 40. Wall incorporates pilasters and cap.

Figure 41. Stone wall.

### Screening

- Service and delivery areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 42.**
- Outdoor mechanical equipment should be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. **See Figure 43.**

Figure 42. Screened delivery area.

Figure 43. Screening of roof-mounted equipment.

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site.
- Trash enclosures visible from the public view shall integrate horizontal screening such as trellises.

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets, and to prevent light spillover into adjacent properties. **See Figure 44.**

Figure 44. Hooded light fixture directs light downward.

- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 45.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures. **See Figure 46.**
- Decorative light fixtures are encouraged, as long as fixtures are consistent with the architectural design of the building. **See Figure 47.**

#### 4. Parking and Access

##### Parking

- Parking lots should be designed with a clear hierarchy of circulation: major access drives with no direct access to parking spaces; major circulation drives with little or no parking; and parking aisles for direct access to parking.
- Large commercial and retail parking areas should be located behind building facades so as not to be visible from major streets.
- Parking lots shall not be the dominant visual element on the site.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 48.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat gain and the visual impacts of large parking areas.

Figure 45. Bollard lighting along pedestrian walkway.

Figure 46. Pole mounted light.

Figure 47. Decorative light fixtures.

Figure 48. Landscaped parking lot.

- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 49.**
- Parking lot design shall include water quality storm water facilities consistent with City standards. **See Figure 50.**

### Access - Vehicular

- Site access shall promote safety by providing an adequate stacking distance for vehicles between the back of the sidewalk and the first parking stall or circulation aisle.
- Conflict between vehicles and pedestrians shall be avoided at access driveways by providing a walkway on at least one side of the driveway.
- The number of access driveways shall be minimized and located as far as possible from street intersections.
- Site access locations shall be coordinated with existing or planned median openings and driveways on the opposite side of the roadway.
- Unobstructed line of sight at corners and driveways shall be provided to reduce vehicular conflicts. **See Figure 51.**
- Avoid placing primary vehicle access in close proximity to major building entrances in order to minimize pedestrian and vehicular conflicts. **See Figure 52.**

Figure 49. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 50. On-site storm water capture.

Figure 51. Unobstructed sight lines.

Figure 52. Vehicle access is placed away from building entrances.

## Access - Pedestrian

- Clearly defined pedestrian walkways or paths should be provided from parking areas to primary building entrances. Clear and convenient pedestrian access shall be provided between the public sidewalk and the pedestrian areas of the development. **See Figure 53.**
- Raised walkways, decorative paving, landscaping and/or bollards shall be used to separate pedestrian paths from vehicular circulation areas. **See Figure 54.**

Figure 53. Clearly defined pedestrian walkways.

Figure 54. Raised walkway and landscaping in parking lot.

- Parking areas should be designed so that pedestrians walk parallel to moving cars. **See Figure 55.**

## Loading and Delivery

- Loading and delivery service areas shall be located and designed to minimize their visibility, circulation conflicts, and adverse noise impacts to the maximum extent feasible.
- Loading and delivery service areas shall be screened with portions of the building, architectural wing walls, freestanding walls or landscape planting.

Appropriate

Inappropriate

Figure 55. Pedestrian circulation.

- Loading areas shall be designed to not interfere with circulation or parking, and to permit trucks to fully maneuver on the property without backing from or onto a public street. **See Figure 56.**
- Service, loading and delivery areas should take access from planned shared access points to reduce curb cuts along project frontages.

### 5. Architecture

#### Mass and Scale

- The mass and scale of new developments shall be compatible with the existing, adjacent structures. This can be accomplished by transitioning from the height of adjacent buildings to the tallest elements of the new development by stepping back the upper portions of taller buildings.
- Human-scale elements, such as pedestrian-scaled doors, windows and building modules shall be used to emphasize pedestrian orientation.
- The size and location of various building elements (e.g., roofs, parapet walls, wing walls, etc.) shall be in scale to the building as a whole and provide visual interest. **See Figure 57.**

#### Building Facades

- Buildings shall include enhanced and articulated facades along public streets.
- Design details shall be continued or repeated upon all building elevations.
- Building entrances should be readily identifiable. The use of recesses, projections, columns, and other design elements to articulate entrances are encouraged. **See Figure 58.**
- Facades shall provide visual interest with vertical and horizontal variations in wall

Figure 56. Loading area placed behind building outside of circulation lanes.

Figure 57. Building elements add visual interest.

Figure 58. Building Entry.

and roof planes, building projections, door and window bays, arcades, and similar elements/techniques. **See Figure 59.**

- Buildings shall undergo a break in façade approximately every 40 feet, to create a varied wall surface along public areas. Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale should be considered for the remainder of the building spanning public right-of-way frontage.
- Buildings should include vertical elements (e.g., clock tower, building articulation) that create points of visual interest when viewed from the public right-of-way.
- Roof designs that are visually interesting and designed to completely screen all rooftop equipment from public streets are required. **See Figure 60.**
- Buildings should use large windows along walls and skylights in rooftop designs to capture natural light during operating hours.
- The interior areas of commercial development should have shaded or covered walkways.

### Storefronts

- Storefronts shall be comprised predominantly of transparent surfaces (windows). **See Figure 61.**
- The use of clear glass (on the first floor) is strongly encouraged.
- Storefront windows shall be large and a minimum of 24 inches off the ground. The maximum bulkhead (wall plane between the ground and the bottom of the windows) height should be approximately 36 inches.
- Storefront entries should promote a sense of entry into the structure as well as provide a sense of shelter by incorporating

Figure 59. Horizontal and vertical articulation.

Figure 60. Full roof screens all equipment and provides visual interest.

Figure 61. Storefront windows.

elements such as overhangs, canopies, awnings, and recesses. **See Figure 62.**

- If security grilles are necessary, they shall be placed inside the building behind the window display area at a minimum distance of two feet behind the window.
- Product storage racks shall not block views through storefront windows.

### Colors and Materials

- The use of a coordinated three-color palette for the base color and major and minor trim accents is encouraged.
- Colors for all structures on-site should be varied and should consist of neutral, earth tones. **See Figure 63.**
- Exterior finish materials shall be appropriate for the architectural style and/or theme of the entire development and should contribute towards a high quality image. **See Figure 64.**
- Changes in materials shall occur at inside corners to make building volumes appear substantial. **See Figure 65.**
- Materials shall be varied to provide architectural interest, however, the number of materials shall be limited and not exceed what is required for contrast and accent of architectural features.
- Exterior materials and architectural details shall relate to each other in ways that are traditional and logical. For example, heavy materials should appear to support lighter ones. **See Figure 65.**

Figure 62. Storefront overhangs provide a sense of shelter and entry.

Figure 63. Use of neutral, earth tones.

Figure 64. Exterior finish materials.

Figure 65. Heavy materials at base of building with lighter materials above.

## 6. Landscaping

### Plants and Irrigation

- Landscaping should help complete the design of the site and enhance the quality of commercial developments by framing and softening the appearance of buildings, screening undesirable views, and buffering incompatible uses.
- Landscaped areas should generally incorporate planting utilizing a three tiered system:
  - 1) ground covers (including flowering plants—annuals and perennials),
  - 2) shrubs and vines, and
  - 3) trees.

**See Figure 66.**

Figure 66. Example of three tier landscape system.

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. **See Figure 67.**
- Planting materials shall be used in plazas or gathering areas to provide shade and soften the appearance of hard surfaces. Water features and public art are also encouraged in these places. **See Figure 68.**
- Trees located along street frontages shall be selected to match or complement existing or proposed street trees in the public right-of-way.
- A minimum five-foot landscape strip shall be used along circulation aisles in parking lots, and along building side/rear elevations if a walkway is not used. A landscape strip is also encouraged in nonpublic areas and service areas between pavement and buildings.

Figure 67. Highlighting entry points.

Figure 68. Public plaza area within commercial development incorporates water feature.

- On-site water filtration features and bioswales are strongly encouraged, and can also be used as buffering methods for adjacent businesses.
- Drought tolerant and low-water trees, vines, and groundcovers shall be used on-site. When feasible, drip irrigation systems shall be installed to provide on-site vegetation with appropriate irrigation and ensure the highest possible volume of water conservation.
- Planting materials shall be used to provide a buffer against noise, and may be integrated with walls or fences to achieve desired sound reduction and appearance.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### Site Furniture

- Outdoor furniture and fixtures (e.g., lighting, directional signs, trellises, raised planters, works of art, benches, trash receptacles, fencing, etc.) shall be integral elements of the building and landscape design. **See Figure 69.**

Figure 69. Trellis.

- Outdoor furniture shall be of a sturdy construction to withstand daily use. Wood should be avoided.
- Outdoor furniture shall be located so it will not conflict with the pedestrian and motor vehicle circulation patterns. **See Figure 70.**
- Outdoor seating should be shaded.

Figure 70. Outdoor furniture outside of pedestrian walkway.

## Paving

- Decorative paving shall be incorporated into courtyards, plazas, pedestrian walkways, and crosswalks. **See Figure 71.**
- Paving materials shall complement the architectural design of the building and landscape design of the project. The use of stamped concrete, stone, brick, permeable pavers, exposed aggregate, or colored concrete is encouraged. The use of slippery materials (e.g., polished marble or granite) is prohibited.

Figure 71. Enhanced paving in pedestrian areas.

## E. Flex-Tech Multi-Use Facility

The design guidelines in this Subsection shall apply to all flex-tech projects within this land use district.

### 1. Site Design

#### Site Layout

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:

- Fully landscaped setback between building and street.
  - Parking in front of building with a landscape buffer between parking and street.
- 
- Visitor parking may be located at located near the front/visitor entries to the businesses, while employee parking and service areas are located at the sides and rear of the building.
  - Service and loading area should not be located on building side(s) adjacent to a public street. Service and loading areas should be located to the rear of the buildings or in the interior of a multiple building complex. **See Figure 72.**
  - Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. Accessory buildings such as equipment enclosures or storage buildings should be minimized. These service areas should be incorporated into the building design to the greatest extent feasible. **See Figure 73.**
  - The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
  - With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
  - Sea/train-type metal containers are prohibited.

Figure 72. Loading and service areas accessed between buildings in a multiple building complex.

Figure 73. Appropriate location of loading areas.

- Noise-generating activities and storage areas shall be located as far as possible from adjacent properties. Sound attenuation walls shall be used where appropriate to reduce noise.

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.). **See Figure 74.**
- Larger developments should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

### 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets.
- Retail and office space should be located on the front of the building, visible from the public realm and adjacent to visitor parking. Flex areas used for warehousing, distribution, light manufacturing, research and development and other uses without a visitor component should be located to the sides or rear of the building.
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest.
- Buildings should be oriented in a manner that takes advantage of passive solar design.

Figure 74. Outdoor seating area provided between buildings.

- Buildings shall be oriented to provide a buffer between surrounding properties and outdoor work areas, loading, and storage.

### **3. Site Elements**

#### **Fences and Walls**

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way.
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall.
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti.

#### **Screening**

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from visitor areas and adjacent public streets.

- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. **See Figure 75.**

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 76.**
- Trash enclosures shall integrate horizontal screening such as trellises.

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and adjacent to residential zones, and to prevent light spillover onto adjacent properties.
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 77.**

Figure 75. Screening of roof mounted equipment.

Figure 76. Trash enclosures with architectural screening elements.

Figure 77. Lighting along pedestrian walkway.

- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building.

#### **4. Parking and Access**

##### **Parking**

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect.
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside of the building so as not to be visible from adjacent streets.

- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 78.**
- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 79.**

#### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts.
- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 80.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

#### 5. Architecture

##### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.

Figure 78. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 79. On-site stormwater capture system.

Figure 80. Entry drive.

- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses (e.g., residential, schools, etc.).
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 81.**
- Buildings should be designed to accommodate a wide range of uses, from office to small scale retail and service to light manufacturing. Interior spaces should allow for a variety of configurations, combining and dividing spaces as needed based on the uses.

Figure 81. Façade articulation.

### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest.
- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 81.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 82.**
- The orientation of windows in buildings adjacent to a residential zone shall preclude a direct line of sight into residential properties.

Figure 82. Enhanced corner elements.

- Visitor entries to retail and office uses shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a space's entry. **See Figure 83.**
- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 84.**

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.
- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color.
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.

### 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and shall be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) trees;
  - 2) shrubs and vines; and
  - 3) ground coversSee suggested Plant Palette in Table 6-6.
- Special landscape features, such as specimen trees, shall be provided at major

Figure 83. Awnings articulate entries to tenant spaces.

Figure 84. Offset roof planes.

focal points (e.g., project entries, building entries, and pedestrian gathering areas).

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection.
- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls.
- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 85.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction.
- Landscaping and trellises with vines are encouraged for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to residential zones shall include dense landscaping to provide visual screening and noise abatement.

Figure 85. Wall incorporates landscaping at the base.

- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 86.**
- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area.
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/stormwater treatment features and bioswales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 87.**
- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.

Figure 86. Landscaped berm buffers parking.

Figure 87. On-site water filtration.

- Availability and specific site conditions should be considered in final selection.
- Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### F. Special Commercial Uses

#### 1. Drive-Through Uses

##### Site Design

- The predominant feature along the street frontage should be the building, not parking lots or the drive-through aisle.
- The building shall be located to maximize the distance for vehicle queuing while screening the drive-through operations. **See Figure 88.**
- Drive-through aisles shall be located in the rear of the building away from the street frontage whenever possible. If the drive-through aisle is located between the building and the street, dense landscaping and landscaped berms or a screen wall (42 inches high or less) shall be provided to screen the drive-through aisle from street view. **See Figure 89.**

##### Building Design

- All building elevations shall receive the same level of architectural detailing.
- Buildings shall incorporate roof designs with built-in equipment wells or other built-in screening methods, so that screening devices do not appear added-on.
- If the drive-through facility is a pad building within a shopping center, the architecture shall relate to and be compatible with the design of the center. The only feature that identifies the

Figure 88. Vehicle queuing.

Figure 89. Example of appropriately landscaped and screened drive-through aisle.

franchise shall be the company's logo and signs.

## 2. Mini-Storage Facilities

### Site Design

- Offices and customer service areas shall be located adjacent to the street frontage to provide convenient access and help visually break up the front façade.

### Building Design

- Long, flat, unarticulated walls shall be avoided along street frontages. **See Figure 90.**
- Building walls and screen walls shall incorporate substantial articulation, and changes in plane and height to add visual interest.
- A minimum of two different building materials shall be used on building walls and screen walls adjacent to street frontages (e.g., stucco, brick, stone).
- Building materials, textures and landscaping shall be chosen to deter graffiti.

Figure 90. Articulated wall of mini-storage facility.

## 3. Parking Garages

### Site Design

- Where appropriate, parking garages should incorporate ground floor retail adjacent to the public sidewalk. **See Figure 91.**

Incorporate retail or other compatible uses on ground floor whenever possible.

Figure 91. Liner shops.

- A minimum 5-foot wide landscaped strip shall be provided on all sides of the parking structure except where ground floor retail space is provided.

### Building Design

- Parking garages shall be designed to help reduce the mass and scale of the garage and to ensure their compatibility with surrounding uses.
- Conceal view of vehicles in the garage through a combination of screen walls and plantings. **See Figure 92.**
- Avoid a monolithic appearance. This can be accomplished as follows:
  - Minimize horizontal and vertical banding by balancing both horizontal and vertical elements.
  - Use simple, clean geometric forms, and coordinated massing.
  - Step back upper levels of the garage 5 to 10 feet above the first floor. **See Figure 93.**
- Coordinate openings in the parking garage with the size and modulation of adjacent windows, structural bays, and storefronts if the parking garage contains other uses.
- Size openings in the parking garage to resemble large windows as in an office building.
- Use masonry materials that are predominantly light in color, but avoid unpainted concrete.
- Avoid a sloping ramp appearance by providing level and uniform wall planes between floors.
- Visually define and differentiate between pedestrian and vehicular entrances through appropriate architectural detailing. **See Figure 94.**

Figure 92. Parking structure with landscaping.

Figure 93. Horizontal and vertical articulation breaks up parking structure elevation.

Figure 94. Paving differentiates between pedestrian and vehicular entries.

## Access and Circulation

- Vehicle stacking areas for entering and exiting traffic shall be sufficient in length to minimize traffic backup into surrounding streets or within the garage. A minimum of two vehicle lengths of stacking distance shall be provided between the back of the sidewalk and the control gate.
- One inbound lane shall be provided for a garage with a capacity of up to 500 vehicles. At least two inbound lanes shall be provided for garages with a capacity of more than 500 vehicles.
- The maximum aisle length shall not exceed 400 feet without providing a cross aisle.
- Ramp grades shall not exceed 10 percent and parking areas should not exceed a slope of four to five percent.

## Security and Lighting

- The design of the garage shall eliminate possible hiding places and openings that could allow random pedestrian access.
- During periods when parking activity is substantially less than the garage capacity (i.e., during night operations), there shall be a means of securing unused parking levels from use, including stairwells and elevators. If the garage is not operated on a 24-hour basis the entire facility shall be secured from access during hours when the facility is closed.
- For security reasons, at least one or two sides of the stair tower shall include glass running vertically the height of the tower. Elevators shall be provided with glass-back cabs and shafts. **See Figure 95.**

Figure 95. Glass-back elevator cab and shaft.

- Stairs and elevators shall be located adjacent to a street on the exterior of the structure where lobbies can be exposed to outside view.
- The use of security cameras is required.
- A minimum of five foot-candles shall be provided inside the structure and a minimum of three foot-candles for exterior parking areas. Higher levels are recommended for remote areas subject to security problems such as stairways, elevators, and other pedestrian access points.
- Lighting levels shall be equally distributed to provide uniform illumination over all parking areas.
- Light sources shall be shielded so that the source of the illumination is not seen from outside the structure.

### 5. Service Stations

#### Site Design

- The site shall be designed to accommodate anticipated circulation patterns and those patterns should be defined by paving and by well-placed landscaped areas.
- In areas developed with buildings adjacent to the sidewalk, service stations shall also be oriented to the sidewalk, placing any service bay door and car wash openings on the rear of the structure.
- Where commercial development abuts the service station, two-way vehicular access integrated with the adjacent commercial development shall be provided where feasible.
- The site design for projects located at street corners shall provide a strong design element at the corner to help frame the public right-of-way and anchor the corner. **See Figure g6.**

Figure g6. Corner landscaping element.

- Parking spaces for vehicles left for repair shall be located in the least visible areas of the site and screened from public view.
- Service or car wash bays shall not face toward a public street.
- Work bays shall be oriented so that the interior of the bays are not visible or audible from a public street. **See Figure 97.**
- Each pump island shall include a vehicle stacking area for at least two vehicles (38-feet), on at least one end of the pump island and shall not restrict vehicle circulation and parking areas.
- A gasoline tanker truck unloading zone shall be provided and shall not obstruct vehicle circulation and parking areas.

Work Bays

Figure 97. Work bays face interior

### Building Design

- Service station buildings shall be designed to complement and be compatible with the predominant architectural theme and scale of the area. If located within a multi-use center, the architectural design shall be compatible with the design of the center.
- The design of the building should be clean and simple, and shall relate to surrounding buildings through use of similar scale, materials, colors, and/or detailing.
- Building elevations facing public streets shall be architecturally detailed to provide interest and the appearance of quality development.
- The roof design of service stations, including pump island canopies, shall incorporate full, pitched roof treatments with a low to moderate slope. **See Figure 98.**
- Building materials shall have the appearance of substance and permanency (e.g., masonry).

Figure 98. Sloped roof on pump island canopies.

### Landscaping and Walls

- A three-foot high, landscaped berm, a dense hedge, or a low wall shall be provided along all street frontages where parking is provided. **See Figure 99.**
- A minimum six-foot high decorative masonry wall shall be provided along side and rear property lines not abutting public streets. A minimum five-foot wide landscaped planter shall be provided adjacent to the wall in areas accessible to the public.

Figure 99. Landscaped berm.

### Site Elements

- Gates, fencing, and walls shall remain free of signs or other advertisements.
- The use of chain-link fencing is prohibited if visible from a public street.
- Where security is an issue, fencing shall consist of open grille work, and the use of surveillance cameras is encouraged.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

## 4. Shopping Centers

### Site Design

- Portions of primary buildings and/or freestanding satellite buildings shall be located at the street setback lines to enclose the site and help frame the street. **See Figure 100.**

Figure 100. Buildings placed at street setback lines.

- Buildings within the center shall have a logical spatial and functional relationship to each other and shall provide for convenient pedestrian circulation throughout the center.
- Parking shall be provided within convenient walking distances of all tenants. Walking paths to buildings from the public street shall be provided. **See Figure 101.**
- To reduce the visual impact of large paved areas, parking lots shall be broken up into smaller areas separated by landscaping, pedestrian circulation areas and drive aisles.
- Storage areas and loading facilities shall be limited in number and shall be designed, located, and screened to minimize their visibility from outside public areas and surrounding streets.

### Building Design

- Buildings, hardscape, landscape, site furnishings and signage should reflect a unified theme. **See Figure 102.**
- Long, linear buildings shall be avoided. Where such buildings are unavoidable, their length shall be mitigated by changes in building height, wall plane, and spatial volumes and by varied use of window areas, arcades, roof elements, and building materials. **See Figure 103.**
- If the shopping center contains a large scale building, integration of smaller-scale shops along the exterior of the building with entrances from the exterior of the building are desirable in order to create a more human scale and pedestrian-oriented character.

Figure 101. Walking paths.

Figure 102. Unified theme.

Figure 103. Articulation along wall plane.

- Side and rear elevations of commercial buildings that are visible from public rights-of-way shall be architecturally consistent with the front elevations of the building.
- Blank walls adjacent to main pedestrian areas shall be avoided.
- Flat roofs, mansard roofs, and veneer parapets are strongly discouraged in favor of full, pitched roof treatments. In large centers, a combination of flat roofs with decorative cornices and full, pitched roofs may be acceptable if the design presents a balanced appearance. **See Figure 104.**
- All roof-top and ground-mounted equipment shall be screened from view.
- Outdoor sales and storage areas shall be designed to blend with the architecture of the main building. The height of the screening elements shall be tall enough to screen all stored materials. **See Figure 105.**

Figure 104. Appropriate roofing.

Figure 105. Outdoor sales area.

### **7.10 Development Incentives**

This Section offers development incentives to produce greater land use efficiencies and reduce incremental costs for new development.

#### **A. Applicability**

The incentives in this Section shall apply to all new development that meet(s) the applicable eligibility criteria.

#### **B. Definitions**

For the purposes of this Section, lot consolidation shall have the following meaning:

1. Lot consolidation. A legal action in which a lot line is removed or abandoned; a lot line is adjusted; lots are merged; or other equivalent action is taken, for the purpose of allowing a structure or development to be built so that it extends over what were previously two or more separate lots. A lot consolidation cannot create additional lots and cannot make existing lots nonconforming. All lots must be identical in ownership.

#### **C. Lot Consolidation and Lot Integration Incentives**

1. Eligibility requirements. In order to be eligible for the by-right development incentives indicated in Subparagraph 2, below, the minimum consolidated lot size for a development shall be 97,500 square feet.
2. By-right incentives. Eligible projects shall receive one or more of the following incentives:
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review), irrespective of the number of lots involved.
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 7.6 Parking and Loading Standards.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio [FAR]) and in maximum height shall be in the amounts listed in Table 7-10 – Allowable Bonuses for Lot Consolidation. The intensity and height bonus incentives shall apply to the total gross square footage of the consolidated lots

| Table 7-10<br>Allowable Bonuses for Lot Consolidation |                                  |                    |                               |
|-------------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                           | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.5                                                   | 15%                              | 60 ft              | 15 ft                         |

**D. Green Building Incentives**

1. Eligibility requirements. Projects that are seeking green building certification by a third-party entity (e.g., LEED, etc.) shall be eligible for the by-right development incentives indicated in Subparagraph 2.
2. By-right incentives.
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review).
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 7.6 (Parking and Loading Standards), as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio (FAR)) and in maximum height shall be in the amounts listed in Table 7-11 – Allowable Bonuses for Green Building. The intensity and height bonus incentives shall apply to the total gross square footage of the project site.

| Table 7-11<br>Allowable Bonuses for Green Building |                                  |                    |                               |
|----------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                        | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.5                                                | 15%                              | 60 ft              | 15 ft                         |

**E. Application and Review Process for Incentives.**

1. Written submittal. Interested parties shall submit a written request for approval of incentives to the Director of Community Development.
2. Pre-application hearing. Before the approval of any incentives, the project applicant(s) shall attend a pre-application meeting with the Director of Community Development. Fees for pre-application meetings shall be waived.
3. Determination. The Director of Community Development shall determine whether the proposed new development meets the eligibility criteria in Paragraphs C.1. or D.1.

Additional factors to be considered when reviewing applications for incentives shall include the following:

- a. Detriment. The proposal will not detrimentally affect access, design, or other public safety and welfare concerns.
  - b. Covenants or conditions. The proposal will not violate recorded covenants.
  - c. Right-of-way easements. The proposal will not invalidate any easement(s) unless the adjustment establishes replacement easement(s) that is properly filed with the city.
4. Conditions. Conditions may be imposed in connection with the granting of any incentive where the Director of Community Development deems that conditions are necessary to protect the public health, safety, and welfare.

## **7.11 Entitlement Procedures**

### **A. Purpose**

These administrative procedures have two major purposes:

1. Ensure that development conforms to the SWIP Specific Plan ("Plan").
2. Ensure that the City's review is as expedited as possible while remaining legal and proper.

### **B. Summary of Processing Procedures**

1. Conformity with the Plan. The Director of Community Development shall review each application for conformity with the development regulations in this Chapter. *Conformity* has two components:
  - a. Standards. Compliance with the Standards is mandatory and the City may not approve a project that fails to comply with the Standards.
  - b. Guidelines. The City may exercise discretion in evaluating the project's compliance with the Guidelines.
2. Project Review. Applications for development approvals shall be filed with the Department and will be returned for revision. Applications must strive to meet the "Guidelines," but applicants may propose alternate ways to achieve the goals of the Guidelines.
3. Timing of Permits and Approvals. Required planning approvals shall be obtained before the issuance of any grading, building, or other construction permit, and before the proposed use is constructed, otherwise established, or put into operation.
4. Processing Requirements. Applications for planning permits shall be processed in compliance with Table 7-12 – Hearing Bodies.
5. Timing of Project Review. Project review shall be required before the issuance of a Building or Grading Permit, Business License, or Certificate of Occupancy for any new structure (not including fences or walls) and/or existing structures to be reconstructed or remodeled (including facade improvements).

Notes:

Decisions of any "Reviewing Body" may be appealed to the City Council, except where State law limits such appeal to the City Engineer. If the Planning Commission is listed above as the "Appeal Body", the Commission must first review an Appeal before it may be forwarded to the City Council for consideration.

DAB—Development Advisory Board

CD—Community Development Director

PC—Planning Commission

CC—City Council

PR—Parks and Recreation Commission

X\*—At the discretion of the Director of Community Development or his/her designee

X\*\*—If Public Park(s) are considered

X\*\*\*—City Engineer has final approval

f—Recommending body to the City Council

**C. Administration and Enforcement**

The Director of Community Development shall enforce the provisions in this Specific Plan. All officers, employees, and officials of the City of Fontana, who are vested with the duty or authority to issue permits or licenses shall conform with this Specific Plan and shall not issue any permit or license, or approve any use or building, which would be in conflict with this Specific Plan. Any permit, license or approval issued that is in conflict with the requirements of this Specific Plan shall be considered null and void.

**D. Amendments to the Specific Plan**

The SWIP Specific Plan may be amended utilizing the same procedures by which it was originally adopted. In addition, subsequent amendments to this Specific Plan shall demonstrate the amendment meets the intent of the Specific Plan's existing policy framework, or specific findings to demonstrate the amendment enhances the Plan or is necessary to more effectively implement the Specific Plan. All sections or portions of the Specific Plan proposed to be amended or that may be affected by the amendment must be identified during the amendment process. A concurrent amendment to the General Plan would not be required provided that the Director of Community Development determines that substantive changes would not influence the goals, objectives, policies, or programs of the General Plan.

Allowing flexibility in the administration of the Specific Plan enhances the effectiveness of the Specific Plan as a comprehensive, "living" planning document. The following minor modifications to the Specific Plan qualify for processing as an administrative amendment to the Specific Plan subject to the review and approval of the Director of Community Development:

- Changes in the location of infrastructure and public facilities (e.g., internal roads, drainage facilities, etc.).
- Minor change in roadway alignment.

**E. Similar Use Determination**

1. Applicability and Authority. Unlisted uses in Table 7-2 are prohibited uses, unless the Director of Community Development finds a proposed use to be similar to an expressly allowed use in compliance with this Section. A Similar Use Determination is a process for determining when an unlisted use is similar in nature to a permitted or conditionally permitted use and may be permitted. As specified by Municipal Code Section 30-4 Other Uses to be Determined by the Director of Community Development, the Director of Community Development shall have the responsibility and authority to make Similar Use Determinations.
2. Ministerial Action. A Similar Use Determination shall constitute a ministerial action.
3. Application Contents and Filing. An application for similar use shall be in writing on forms provided by the Director of Community Development.
4. Determination Findings. In determining "similarity," the Director of Community Development shall make all of the following findings:

- a. The characteristics of and activities associated with the proposed use are equivalent to one or more of the listed uses and will not involve a higher level of activity or environmental impacts than the uses listed in the land use district;
  - b. The proposed use will be consistent with the purposes of the applicable land use district; and
  - c. The proposed use will be consistent with the General Plan and this SWIP Specific Plan.
- 5. Notice. A Similar Use Determination shall be made in writing and shall contain the facts that support the determination. The Community Development Department shall maintain all determinations on record for review by the general public upon request. The notice shall include:
  - a. A brief statement explaining the criteria and standards considered relevant to the decision;
  - b. A statement of the standards and facts relied upon in rendering the decision; and
  - c. An explanation of appeal rights and appeal deadlines. The determination of similar use by the Director of Community Development shall be subject to appeal to the Planning Commission.

***F. Nonconforming Lots, Structures, and Uses***

- 1. Nonconformance provisions are established to:
  - a. Bring all uses, structures, sites and signs into conformance with the developmental requirements and design guidelines in the Code;
  - b. Limit the occurrences and extent of nonconformance by prohibiting expansion, intensification, reinstatement, alteration, restoration after destruction, and reestablishment after abandonment; and
  - c. Gradually phase out nonconforming uses, structures, lots, and signs.
- 2. Applicability
  - a. Nonconforming uses, structures, signs and lots may be maintained, expanded, altered and/or abated only in accordance with the provisions of this Specific Plan.
  - b. Any Designated Historic Landmark, or any property listed on the California Register of Historical Resources or National Register of Historic Places, shall be exempt from the provisions of this Section with respect to the restoration and maintenance of structures, provided that any construction plans are approved through a Certificate of Appropriateness by the Historic Preservation Commission/Planning Commission.

3. Nonconforming Uses. A use that lawfully occupied a building or land at the time this Specific Plan became effective, and that does not conform to the use regulations of the land use district in which it is located, is deemed a "legal nonconforming use." A legal nonconforming use may continue, subject to the following:
  - a. Discontinuation of Use
    - i. Loss of legal nonconforming status. If a legal nonconforming use is discontinued for a period of 90 or more days, regardless of the owner's intent, it shall lose its legal nonconforming status and the continued use of the property shall be required to conform to all provisions of this Specific Plan.
    - ii. Extension of legal nonconforming status. Wherein special circumstances exist, the Director of Community Development may extend the legal nonconforming status of a use, for up to an additional 90-day period. Furthermore, an additional extension may be granted by the Planning Commission, for up to an additional 90-day period. The total time period of all time extensions shall not exceed 180 days.
    - iii. Extension of legal nonconforming use.
      - (1) An application for a Minor Use Permit shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
      - (2) The application shall be reviewed by the Director of Community Development within 30 days following application filing. The Director of Community Development shall notify the applicant, in writing, as to whether the application is complete. If the application is not complete, the Director of Community Development shall specify those parts of the application that are not complete and shall identify the manner by which it can be made complete. If written notification is not provided to the applicant within 30 days following application filing, the application shall be deemed complete.
      - (3) The Director of Community Development shall investigate the facts bearing on the application and provide the information necessary for action on the application, consistent with this Specific Plan and the General Plan. The applicant shall have made a good faith effort through the submittal of documentation and has diligently pursued compliance with this Specific Plan.
      - (4) The application shall be reviewed by the Director of Community Development at a duly noticed public hearing, whom shall then approve, modify or deny such application. The decision of the Director of Community Development shall be final and conclusive in

the absence of a timely filed appeal to the Planning Commission. An appeal of the Director of Community Development's decision shall be filed within 10 days from the date of the decision of the Director of Community Development. An appeal of the Director of Community Development's decision shall be reviewed by the Planning Commission. The decision of the Planning Commission shall be final and conclusive in the absence of a timely filed appeal to the City Council.

- (5) The applicant may appeal the decision of the Planning Commission to the final deciding body, the City Council. The City Council decision shall be final and conclusive. If the application to extend the legal nonconforming use is approved by the City Council, the extension shall be granted for 90 days from the date of approval.
  - (6) If the Director of Community Development or appointed designee has determined that the applicant has failed to show a good faith effort towards continually processing the extension of legal nonconforming use application (i.e., revising plans, withdrawing the application, placing the project on hold, etc.), the legal nonconforming use shall cease within 60 days from the application submittal date.
  - (7) In granting an extension of the legal nonconforming status, the Director of Community Development may attach reasonable conditions and restrictions to the request, in addition to those required by this Specific Plan, which will ensure that the use:
    - Will not endanger the public health, safety or general welfare;
    - Will not injure the value of adjoining or abutting property;
    - Will not result in any significant environmental impacts; and
    - Will be in harmony with the area in which it is located.
  - (8) In approving an extension of the legal nonconforming status, the Director of Community Development or Planning Commission shall consider and clearly establish the following findings of fact:
    - The non-conforming use has been discontinued within the 90-day period.
    - A physical and/or economic hardship has prevented the nonconforming use from being in compliance prior to the expiration of the 90-day period;
    - Approving the extension will not adversely affect the health, safety or general welfare.
- b. Change in Ownership, Tenancy or Management. A change in ownership, tenancy or management of a nonconforming use shall not affect its legal nonconforming status, provided that the use did not discontinue pursuant to Section (3.a.i.) "Loss

of legal nonconforming status or the type of use and/or intensity of use do not change.

- c. New Development. New development on any lot or parcel upon which a legal nonconforming use exists shall require that all uses on the property conform to the provisions of this Specific Plan.
  - d. Alterations and Expansion of Use
    - i. A nonconforming use shall not be enlarged or extended in such a way as to occupy any part of any structure or property that it did not occupy prior to the creation of the nonconformity.
    - ii. A structure fully or partially occupied by any nonconforming use shall not be moved, altered or enlarged, unless required by law, or unless the moving, alteration or enlargement will result in the elimination of the nonconforming use.
  - e. Intensification of Use. A nonconforming use shall not be intensified in such a way as to increase the discrepancy between existing conditions and the standards set forth in this Specific Plan.
4. Nonconforming Structures. A structure lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of the land use district in which it is located, including setbacks, separations, height and design, is deemed a "legal nonconforming structure." A legal nonconforming structure may continue to exist, subject to the following:
- a. Damage or Destruction
    - i. A legal nonconforming structure that is damaged or partially destroyed by fire, flood, wind, earthquake or other calamity, or the public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented by reasonable care and maintenance of the structure, may be reconstructed up to the original size, placement and density, provided that total cost of such reconstruction does not exceed more than 50 percent of the structure's current fair market value. The structure may be restored and the nonconforming use may be resumed, provided that restoration is started within six months, unless extended by the Director of Community Development, and diligently pursued.
    - ii. In the event that the cost of repairing such damage exceeds 50 percent of the current fair market value of the structure prior to such damage occurring, the structure may be reconstructed up to the original size, placement and density, subject to all of the following:
      - The Planning Commission, at a duly noticed public hearing, must find that continuing the nonconforming structure will not result in an annoyance to and/or reduction of any surrounding property; and

- The extent of damage or partial destruction shall be based upon a comparison of the estimated cost of restoring the structure to its condition prior to such damage or partial destruction with its value at the time the structure was damaged or partially destroyed. Estimates for such purpose shall be made by or reviewed by the Building Official; and
  - The restoration is commenced within six months and diligently pursued to completion.
  - An application for a Nonconforming Structure shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
  - A structure or development that has been damaged or destroyed by fire, flood, wind, earthquake, or other calamity, or by public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented may be reconstructed up to the original size, placement and density, except a multiple family dwelling or development which has been abandoned for a period of 90 or more days prior to being involuntarily damaged or destroyed, or a multiple family dwelling or development constituting a public nuisance prior to being involuntarily damaged or destroyed may not be reconstructed unless the structure is made to comply to all provisions of this Specific Plan.
- b. Alterations and Expansion
- i. A nonconforming structure shall not be moved, altered or enlarged so as to increase the discrepancy between existing conditions and the most current standard as prescribed by the land use district in which the structure is located, except alteration and/or enlargement to a single family dwelling conducted pursuant to section ("e") Nonconforming Single-Family Residential Structures".
  - ii. Within land use districts, reasonable repairs and alterations may be made to legal nonconforming structures, provided that no structural alterations shall be made which would prolong the life of supporting members of a structure, such as bearing walls, columns, beams or girders. Structural elements may be modified only if such modification or repair is immediately necessary to protect the public health and safety, occupants of the legal nonconforming structure, or adjacent property, as determined by the Building Official. The total cost of such repairs or alterations may not exceed 50 percent of the replacement cost of the nonconforming structure.

- c. **New Structures.** Any new structure constructed on a lot or parcel with an existing legal nonconforming structure shall be constructed in conformance with all applicable provisions of this Specific Plan. However, in no case may a new nonresidential structure be constructed on the same lot as an existing legal nonconforming residential structure.
- d. **Abatement of Nonconforming Structures Posing a Threat to the Public Health, Safety and General Welfare.** A structure which is nonconforming because of a violation or deficiency that poses a threat to the public health, safety or general welfare, as determined by the Building Official, and which fails to resolve, repair or improve such, or to fully mitigate the hazard involved, shall be abated, condemned or demolished upon the issuance by the City of a nuisance abatement, condemnations or demolition order.
- e. **Nonconforming Single-Family Residential Structures.** In addition to the requirements of subsections a and d above, a nonconforming single family residential lot and/or structure that was lawfully established and maintained before the adoption of this Specific Plan, but which under the provisions of this Specific Plan does not conform with the regulations of the land use district in which it is located with respect to use, design and/or development standards, and which is continuously used and maintained for single family residential purposes, shall be subject to the following:
  - i. **Alterations and expansions to structures within nonresidential zones.**
    - Necessary repairs and desirable alterations, as deemed appropriate by the Director of Community Development, may be made to a legal nonconforming single family residential structure that is nonconforming as to use.
    - A single family dwelling that is nonconforming as to its location within a land use district that does not permit single family dwellings, and in which the residential use was lawfully established and continuously maintained, shall be subject to the development regulations of the Municipal Code Chapter 30 Zoning and Development Code that pertain to the R1 zoning district and off-street parking and loading regulations.
- 5. **Nonconforming Signs.** A sign lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of Section 7.7 Sign Standards, is deemed a "legal nonconforming sign." A sign that presents a hazard to public safety, as determined by the City, shall be removed upon the issuance of a notice by the City. A legal nonconforming sign may continue to exist, subject to the following:
  - a. A nonconforming sign may not be altered, enlarged, extended, or moved, except in conformity with the requirements of Section 7.7 Sign Standards, or as otherwise required by law;

- b. Where a use or a structure associated with a nonconforming sign is abandoned or discontinued, any sign associated with a new use of the site shall be in full conformity with the requirements of Section 7.7 Sign Standards.
- 6. Nonconforming to Development Standards. The development that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area, coverage, configuration, dimensions, parking, landscaping, screen walls, fences and enclosure trash receptacles, is deemed "legal nonconforming," provided such development was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A development that is nonconforming as to landscaping, screen walls, fences and enclosure of trash receptacles, shall be altered to comply with the district regulations covering the following standards, or as a condition of any subsequent Development Plan or Conditional Use Permit approval.
- 7. Nonconforming Lots. A lot or parcel that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area and configuration is deemed a "legal nonconforming lot," provided such lot or parcel was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A lot or parcel that is nonconforming as to minimum area or dimension shall be granted all development rights and uses of the land use district within which it is located.
    - i. The landscaping of setback areas insofar as a setback exists;
    - ii. The landscaping of parking areas, provided fulfilling the requirement does not reduce off-street parking or loading spaces to fewer than prescribed in this Specific Plan;
    - iii. The screening of storage areas; and
    - iv. The enclosure of trash receptacles.
- 8. Elimination of Nonconforming Adult Business Uses. Nonconforming adult business uses shall be eliminated in compliance with Municipal Code Chapter 30 Zoning and Development Code.
- 9. Abatement of Nonconforming Uses, Structures, Lots and Signs. Whenever a use, structure, site or sign becomes nonconforming because of a change of land use district boundaries or a change of the regulations prescribed for the district in which the site is located, the period of time prescribed in this Specific Plan for the abatement period for the elimination of the use, the removal of the structure or sign, or the improvement of the lot or parcel shall begin on the effective date of the change of district boundaries or regulations.

Exhibit 8-13 Street Furniture Palette ..... 8-60

### **8.1 Purpose**

The Jurupa South Industrial District (JSD) is intended to maintain and promote larger scale industrial uses, including manufacturing and warehousing, while focusing on compatibility with residential uses to the east. It will also serve as an entry point into the project from the southwest and west. General features of this District include:

- Landscape/Streetscape Enhancement
- Preservation and revitalization of existing uses
- Focusing on regional connectivity
- Establishment of uses that capitalize on regional market potential
- Development that complements the adjacent portions of the project area to the northeast
- Development that respects adjacent residential and institutional development
- Providing unique streetscape and edge treatments on Jurupa and Etiwanda to create a SWIP Gateway

## **8.2 Applicability**

### **A. Projects Subject to Development Regulations**

This Chapter contains the Development Regulations that govern all future private development actions in the JSD, including new construction, additions or renovations to existing structures and/or new land uses proposed for existing facilities.

### **B. Right of Continued Use**

This Chapter shall not require any change in any existing building or structure for which a building permit has been previously issued, or for approved plans on file in the Community Development Department before the effective date of this Specific Plan. Changes in the property's ownership or tenants of legal existing uses shall likewise require no change in any existing building or structure. Nonconforming standards and provisions shall be governed by Section 8.11 Entitlement Procedures.

### **C. Other Requirements**

This Chapter does not eliminate the need for obtaining any other permits required by the City, or any permit, approval or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.

### **D. Types of Development Regulations**

The Development Regulations are of two types – Standards and Guidelines – as follows:

1. Standards address those aspects of development that are essential to achieve the goals of the Specific Plan. They include specifications for allowable land uses and site development (e.g., building height, setbacks, etc.). Conformance with Standards is mandatory. Standards are indicated by use of the words "shall," "must," or "is / is not permitted."
2. Guidelines provide guidance for new development in terms of aesthetics and design details. They are intended to direct building and site design in a way that results in the desired character for the JSD. Whereas conformance with the Standards is mandatory, conformance with the Guidelines is preferred and/or recommended. Provisions that fall into this category are indicated by the use of the words "should," "may" or "are encouraged to." In various cases, the Guidelines provide a choice of treatments that will achieve the desired effect. Developers are permitted to propose alternative design details if they are able to show that such details implement the Specific Plan objectives with respect to the desired character of the JSD.

### **E. Minimum Requirements**

The provisions in this Chapter shall be minimum requirements. When this Chapter provides for discretionary authority on the part of the Director of Community Development, Planning Commission, or City Council, that discretion may be exercised to impose more stringent requirements if deemed necessary to accomplish the overall objectives of the JSD.

### **F. Overview of Development Regulations**

1. Relationship of Land Use Districts. The Development Regulations in this Chapter are applied to those properties that are within the JSD. Exhibit 8-1 – Land Use Plan indicates the location of the JSD and its relationship to the other land use districts in the Specific Plan area.
2. Standards, Guidelines, and Procedures. The Development Regulations are divided into the following sections: 8.3 Allowable Land Uses and Permit Requirements; 8.4 Development Standards; 8.5 Landscape Standards; 8.6 Parking and Loading Standards; 8.7 Sign Standards; 8.8 Public Right of Way Streetscape; 8.9 Design Guidelines; 8.10 Development Incentives; and 8.11 Entitlement Procedures. Projects must meet all development standards in order to achieve approval in the development review process. Projects are encouraged to adhere to the guidelines contained in Section 8.9 Design Guidelines.
3. Steps for Using Chapter. Table 8-1 – Process Procedures illustrates the steps for using this Chapter.

| <b>Table 8-1 – Process Procedures</b>                                                                                       |                                                        |                             |

# Southwest Industrial Park Specific Plan

Jurupa South Industrial District

City of Fontana Southwest Industrial Park (SWIP) Specific Plan Jurupa South Industrial District

Exhibit 8-1 – Land Use Plan

### **8.3 Allowable Land Uses and Permit Requirements**

This Section identifies allowable land uses and their permit requirements.

#### **A. Allowed Uses**

Table 8-2 – Allowable Land Uses and Permit Requirements identifies the types of land uses allowed in the JSD and the use permit required to establish each use.

#### **B. Uses Not Listed**

Uses not listed in Table 8-2 – are prohibited land uses, until and unless the Director of Community Development makes a similar use determination in compliance with Section 8.11.C Entitlement Procedures – Similar Use Determination.

#### **C. Other Applicable Regulations**

The provisions contained in this SWIP Specific Plan constitute the primary land use and development standards for the Specific Plan area. These regulations are in addition to the provisions in the City of Fontana Municipal Code.

This Specific Plan provides all development standards and guidelines necessary to approve subsequent project applications, unless otherwise noted. Permit processing procedures (e.g., noticing, hearing, appeals, and expiration procedures) and enforcement procedures are provided in Municipal Code Chapter 30 (Zoning and Development Code) shall apply, unless otherwise noted. Where there is a conflict between the provisions in this Specific Plan and those in the Zoning and Development Code, the Specific Plan provisions shall prevail to the extent allowable under Federal or State law. Where there is no conflict, both shall be applied concurrently.

#### **D. Definitions**

Definitions for land uses are provided in Appendix A Definitions. If a definition is not provided, the definitions in the Municipal Code shall apply. The Director of Community Development shall interpret the definitions; make a similar use determination in compliance with Section 8.11.C Entitlement Procedures – Similar Use Determination; and/or refer any questions to the Planning Commission for its determination. For the purposes of this Specific Plan, the following definitions shall apply:

1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
2. Industrial Use: Those fields of economic activity including construction, manufacturing, transportation, communication, electric, gas, and sanitary services, and wholesale trade.

**Table 8-2 – Allowable Land Uses and Permit Requirements**

## 8.4 Development Standards

New land uses and structures and alterations to existing land uses and structures in the JSD shall be designed, constructed, and established in compliance with the requirements in this Section.

### A. Intensity and Dimensional Standards

Table 8-3 – Intensity and Dimensional Standards provides the required intensity and dimensional standards for proposed development. The Director of Community Development is authorized to approve modifications of 10 percent or less of any land use district setback, lot width, lot depth, building coverage, building height, or wall height standard in compliance with the administrative variance procedures in Municipal Code Section 30-51.6 (Findings necessary for granting a variance). See Exhibit 8-2 – Dimensional Standards.

The Director of Community Development may grant an administrative variance from the requirements of this chapter where practical difficulties, unnecessary hardships, or results contrary to the intent of this chapter would occur from the strict and literal interpretation and enforcement of the Code. An administrative variance may be granted upon conditions which will ensure the protection of the public safety, health and welfare. To grant an administrative variance, the Director of Community Development must find from the facts presented that the following conditions exist.

#### Municipal Code Section 30-51.6: Findings necessary for granting a variance

- (1) That because of circumstances applicable to the property including size, shape, topography, location or surroundings, the strict application of this chapter will deprive the property of privileges enjoyed by other property in the vicinity and under identical zoning classification;
- (2) That the granting of such an administrative variance will be subject to conditions assuring that the variance shall not constitute a grant of special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district in which the property is located;
- (3) That the administrative variance does not authorize a use or activity which is not a specifically allowed use in the zoning district in which the property is located; and
- (4) That the granting of one administrative variance will not be contrary to the general plan.

## B. Fences, Walls, and Screening

1. Standards. Table 8-4 – Standards for Fences, Walls, and Screening contains standards for fences, walls, and screening. Refer to Section 8.9 Design Guidelines for guidelines about the design, materials, and construction of fences, walls, and screening.

| Table 8-4 Standards for Fences, Walls, and Screening                                                                |                                                                                                                                                                |                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| <i>Location</i>                                                                                                     | <i>Materials</i><br><i>See Section 8.9 Design Guidelines</i>                                                                                                   | <i>Maximum Height (1)</i>                                                                                 |
| Within front setback area                                                                                           | Solid fencing/wall                                                                                                                                             | 36 inches                                                                                                 |
|                                                                                                                     | Open fencing/wall                                                                                                                                              | 6 ft                                                                                                      |
| Within street side setback area                                                                                     | Tubular steel construction allowed in required setback area if set back at least 15 ft from lot line. Solid masonry wall not allowed in required setback area. | 8 ft if necessary for security purposes, with 18-inch maximum width pilasters a minimum of 8 ft on center |
| Within interior side setback area                                                                                   | Any type of fence, hedge, or wall is allowed                                                                                                                   | 8 ft                                                                                                      |
| Within rear setback area                                                                                            | Any type of fence, hedge, or wall is allowed                                                                                                                   | 8 ft                                                                                                      |
| Outside of a required setback area                                                                                  | Solid or open fencing/wall                                                                                                                                     | No height limit                                                                                           |
| At intersections of alleys, streets, and driveways                                                                  | Solid or open fencing/ wall                                                                                                                                    | 30 inches                                                                                                 |
| Within setback area from San Sevaire Channel                                                                        | MC Chapter 12 (Flood Control)                                                                                                                                  | MC Chapter 12 (Flood Control)                                                                             |
| Within Railroad setback area                                                                                        | Open fencing/wall                                                                                                                                              | 8 ft                                                                                                      |
| Note: (1) All fences and walls shall meet the City's line of sight regulations, as determined by the City Engineer. |                                                                                                                                                                |                                                                                                           |

2. Materials.
  - a. Open fencing shall mean fencing with over 50 percent of the surface area open for free passage of light and air and through which the area behind the fence is visible to public view. See Exhibit 8-3 – Open and Solid Fencing.
  - b. Solid fencing shall mean fencing with 50 percent or less of the surface area open for free passage of light and air and designed to conceal the area behind the fence from public view. See Exhibit 8-3 – Open and Solid Fencing.
  - c. Barbed wire fence, concertina fence, or similar fencing material is prohibited.
  - d. Chain link fencing is allowed on interior property lines that are not visible from public rights-of-way.

*Examples of Solid Fencing*

Exhibit 8-3 – Open and Solid Fencing.

3. Screening and buffering.
  - a. Roof-mounted and ground-mounted mechanical equipment, utilities, storage, and solid waste storage areas shall be screened from adjoining properties and public right-of-ways by a visual barrier (e.g., wall, fence, landscape material, etc.) to the satisfaction of the Director of Community Development. Where only landscaping is used for screening, it shall be planted with five-gallon (minimum size) shrubs spaced to provide a continuous dense screen.
  - b. Parking lot perimeters shall be screened and planted in compliance with Section 8.6 Parking and Loading Standards.

**C. Outdoor Activities and Storage**

1. Storage in Setback Areas. Material or equipment shall not be stored anywhere in the front yard. Temporary storage of construction materials during construction on the same site is permitted. Boats, campers, motor vehicles, trailers, equipment, materials, or antenna that may be stored in side and rear yards, provided that they are outside the required setback areas identified in Table 8-3 – Intensity and Dimensional Standards.
2. Limitations on Outdoor Uses
  - a. All uses shall be conducted entirely within a completely enclosed building that is attached to a permanent foundation, except approved outdoor dining areas, vehicle sales and rental businesses, parking areas, nursery growing areas, industrial activities, and other approved uses that require outdoor activities.
  - b. Areas used for the approved outdoor storage of vehicles, equipment and/or building materials (raw or finished) may use compacted slag, gravel, or other similar material deemed suitable by the Director of Community Development.
3. Outdoor Wholesaling. Outdoor wholesaling of goods and materials shall comply with the following:
  - a. A building shall be provided on the same parcel or on an adjacent parcel associated with the same business.
  - b. All display materials, including vehicles, shall be set back five feet from any landscaped area and shall not be located on required parking areas.
  - c. The entire area used for display purposes shall be surfaced with asphalt or an equally serviceable hard pavement surface. The surface shall be maintained in good condition.

- d. Storage of equipment or materials, with the exception of the display of vehicles for sale or rent, shall be screened by a visually solid masonry wall of minimum height six feet. The approving authority may determine through the design review process that the subject use requires a solid masonry wall higher than six feet.
- e. Outdoor display areas shall be maintained in a neat and orderly condition.

***D. Caretaker Housing***

Caretaker housing shall be:

1. Accessory to a principal use;
2. A maximum of 1,500 square feet total floor area unless otherwise approved by the Planning Commission;
3. Limited to one unit per lot; and
4. Subject to the setback requirements applicable to the principal structure with which it is associated.

***E. Solar Access***

A structure, fence, or wall shall not be constructed or modified, and vegetation shall not be placed or allowed to grow so as to obstruct more than 10 percent of the absorption area of a solar energy system on an abutting or adjacent lot at any time.

***F. Undergrounding of Utilities***

1. Utility service laterals to new development shall be installed underground.
2. Temporary overhead power and telephone facilities are permitted only during construction.
3. Placement, location and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.
4. Transformer enclosures shall be designed of durable materials with finishes and colors used that are compatible and harmonious with the overall architectural theme.
5. All utilities including, but not limited to drainage systems, sewers, gas lines, water lines, and electrical, telephone, and communications wires and equipment shall be installed and maintained underground. Placement, location, and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission before any administrative or discretionary approval.

## 8.5 Landscape Standards

### A. Required Landscaping

This section provides the required minimum standards for all landscaped areas within any new and rehabilitated development.

1. Landscaped area means the entire parcel less the building footprint, driveways, nonirrigated portions of parking lots, and hardscapes (driveways, approaches, sidewalks, etc.). Decorative hardscapes used to enhance the landscape will be considered as part of the landscape area; this would include such things as cobble rock, decomposed granite, brickwork, stamped concrete, gravel, pavers, and water features.
2. Landscape setbacks along public right-of-ways shall incorporate landscape buffers with undulating and variable height earth-mounding (berms), and/or low walls, and required plant materials as shown in Table 8-5 – Landscape Standards.
3. Block wall and wrought iron fencing shall be located behind landscape setback area(s).
4. The developer shall submit to the City's Department of Engineering, a Landscape Documentation Package that conforms to the Water Efficient Landscape Ordinance, in the Municipal Code, Chapter 28Vegetation.
5. All new development landscaping shall comply with the standards shown in Table 8-5 – Landscape Standards. Additional guidelines that should be considered are addressed in Section 8.9 Design Guidelines.
6. The Recommended Plant Materials Palette, Table 8-6 can be found immediately after this section. The plant materials palette is provided to ensure the installation of drought-tolerant, water efficient landscaping that will provide wind breaks and thrive in the local climate conditions. In an effort to provide visual elements that distinguish this district from others, please note that turf (grass) does not appear in the Plant Materials Palette, and shall be prohibited, in lieu of drought-tolerant ground covers.
7. Public right-of-way improvements, including street improvements, streetscape/landscape (parkway) improvements, and street tree requirements, are in Section 8.8 Public Right-of-Way Streetscape.

**Table 8-5 – Landscape Standards (1)**

|                                                                                                    |                                                                                                                                                                                                                                                                                                                        |

Notes: (1) The Director of Community Development may require additional setbacks.

**B. Recommended Plant Materials Palette**

The Recommended Plant Materials Palette in Table 8-6 provides a listing of primarily drought-tolerant trees, shrubs, and ground covers to provide water-efficient landscaping in new projects. The limited selection of landscape material in the palette is envisioned to assist the user in incorporating sustainable landscaping into the project, while including enough variety of size, form, and density, to meet the requirements within buffer setbacks and screening techniques. Final selection shall be approved the City. The Director of Community Development shall approve artificial turf.

## 8.6 *Parking and Loading Standards*

### **A. *Applicability***

This section contains regulations for off-street parking and loading. Regulations identify required number of parking and loading spaces for all new development projects and those proposing substantial modification to existing buildings. Please refer to Municipal Code Chapter 30 Zoning and Development Code for all parking and loading-related information or regulations not specifically addressed in this section.

### **B. *General Parking and Loading Regulations***

1. Methods of Calculation.
  - a. Multiple Uses. If more than one use is located on a site, the total number of required off-street parking and loading spaces shall be the sum of the requirements for the various uses computed separately. If individual uses on the same site have a floor area less than that for which loading spaces would be required, then the total gross floor area of all uses on the site or lot shall be used in determining the required number of loading spaces.
  - b. Fractional number. Whenever the computation of the required number of off-street parking or loading spaces results in a fractional number, one additional space shall be required for a fraction of more than one-half, but shall not be required for a fraction of one-half or less.
2. Off-Site Location. Required off-street parking spaces shall be located on the same property as the use that they are intended to serve. Where the required parking spaces cannot be accommodated on the same property, they may be located in a separate off-site parking facility that is not more than 300 feet from the use(s) they serve.
3. Shared Use. Required off-street parking and loading spaces shall not be considered as providing parking or loading spaces for any other use, except where share use facilities are approved in compliance with Subparagraph 5 Adjustments to Parking Requirements, below.
4. Uses Not Specified. For uses not specified, the Director of Community Development shall determine parking requirements based upon the requirements of the most similar use. See Subsection 8.11.C. Entitlement Procedures – Similar Use Determination.
5. Adjustments to Parking Requirements.
  - a. Administrative Variance. The Director of Community Development is authorized to approve alternate parking plans involving a modification of 10 percent or less of any of the off-street parking and loading standards in compliance with Section 30-51.5 in Municipal Code.
  - b. Parking Study Option. An applicant may submit a separate parking and loading study for new development to the Director of Community Development for review and approval. A parking and loading study shall provide sufficient data and

information to justify the need for adjustments to the parking and loading requirements and shall analyze whether:

- i. Adequate off-street parking will be provided for the project;
  - ii. The project demonstrates the use of creative design concepts, including but not limited to shared parking facilities, transit accessibility, pedestrian amenities, and bicycle amenities;
  - iii. Environmental impacts associated with the project will not be increased by the modification of standards; and
  - iv. Traffic safety and pedestrian safety will be enhanced by the modifications.
- c. Shared Use Facility. Required off-street parking and loading spaces may be considered as providing parking or loading spaces for another use where joint facilities serving more than one use contain no less than the total number of spaces deemed necessary for each individual use added together with other uses. Where adjoining uses on the same site have different hours of operation with minimal conflict, the Director of Community Development may determine that some or all of the same spaces may be counted as satisfying the requirements for both uses, provided that the number of spaces shall not be less than the prescribed for the use requiring the greater number.

***C. Required Number of Parking Spaces***

Each land use shall provide the number of off-street parking spaces indicated in Table 8-7 – Parking Requirements by Land Use, except where adjustment has been granted in compliance with Subparagraph 8.6.B.5 Adjustments to Parking Requirements, above. For the purposes of this Section, the following definitions shall apply:

1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
2. Industrial Use: Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

**Table 8-7 – Parking Requirements by Land Use**

**D. Required Number of Loading Spaces**

Each land use shall provide the number of off-street loading spaces indicated in Table 8-8 – Loading Space Requirements by Land Use. Requirements for uses not specifically listed shall be determined by the Director of Community Development based upon the requirements for comparable uses and upon the particular characteristics of the proposed use. For other standards (e.g., size of loading spaces, location, turning radius, etc.), refer to Article XI Off-Street Parking and Loading Standards, Division 4 Loading Area Regulations, in Municipal Code Chapter 30 Zoning and Development Code.

## Southwest Industrial Park Specific Plan

Jurupa South Industrial District

| Other Uses                                                                                                                                                                                                                                                                                                                                            |                                        |                           |
| Temporary Uses                                                                                                                                                                                                                                                                                                                                        | Per Temporary Use Permit               |                           |
| Notes:                                                                                                                                                                                                                                                                                                                                                |                                        |                           |
| (1) A van loading space shall be a minimum of 12 ft wide by 19 ft long with a minimum 10 ft overhead clearance. A truck loading space shall be a minimum of 12 ft wide by 45 ft long with a minimum 14 ft overhead clearance. A tractor trailer loading space shall be a minimum of 12 ft wide by 70 ft long with a minimum 14 ft overhead clearance. |                                        |                           |

**E. Landscaping Standards for Parking Areas**

Within any parking area, one tree shall be planted for every five single-row parking stalls or 10 double-row parking stalls. Eighty percent of these shall be 15 gallons in size and the remaining 20 percent shall be 24-inch box or larger in size. If for some reason the contractor is unable to distribute trees in the interior of the parking area in compliance with these standards, the Director of Community Development may approve the placement of no more than 40 percent of the trees within the perimeter of the parking area. Planters shall not have a dimension less than four feet, excluding the thickness of the curbing. These requirements may be reduced for industrial parking areas that are screened from public view.

1. Parking areas shall contain a minimum landscape area equivalent to 30 percent of the total required 15 percent landscaping for the total site area.
2. Parking area perimeter landscaping.
  - a. Parking areas for nonresidential uses abutting or adjacent to residentially zoned property shall provide a landscape strip that is a minimum of 10 feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line bordering the residentially zoned property. Parking areas shall be screened from the residentially zoned property by a solid decorative masonry wall that is a minimum of six feet in height.
  - b. Parking areas for nonresidential uses abutting or adjacent to non-residentially zoned property or a street shall install a landscape strip that is a minimum of five feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line or the parking area and the street right-of-way. This requirement may be reduced or modified if a joint access agreement exists that is satisfactory to the Director of Community Development. Parking areas shall be screened from streets through combinations of plant materials, earth berms, raised planters, grade separations, or low walls. Slopes shall not exceed three to one or exceed 36 inches in height measured from the parking lot surface.

- c. Plant materials, walls, or structures within a traffic sight area shall not block sight lines from driveways to streets and shall not exceed 36 inches in height.
  - d. The minimum width of a landscape finger shall be five (5) feet.
  - e. End of aisle spaces adjacent to landscape finger shall be two feet wider for step out area.
3. Parking area interior landscaping.
- a. Tree number and location. One tree shall be provided for each four parking spaces and shall be evenly spaced throughout the interior parking area at a rate of one tree for every eight parking spaces. See Exhibit 7-4 – Parking Lot Landscaping. The required number of trees in the interior area shall not include trees required around the parking area perimeter. Trees are not required for tractor-trailer parking. A minimum of one cluster of trees shall be provided for each 100 feet of a row or double row of parking spaces. Trees shall be located in planters that are bounded on at least two sides by parking area paving. Planters shall have a minimum exterior dimension of five feet.

Exhibit 8-4 – Parking Lot Landscaping.

- b. Tree size. All trees within the parking area shall be a minimum 24-inch box container at time of planting.
- c. Landscape protection. Landscaping shall be protected by concrete curbs of at least six inches in height. An end-of-aisle planter shall be provided at the ends of all parking aisles. Finger aisle planters shall be a minimum of nine feet wide and end-of-aisle planters shall be a minimum of seven feet wide, as measured from the inside of the curb. The parking space side of finger and end-of-aisle planters shall have a 24-inch wide concrete surface measured from the face of the curb. Planters shall be landscaped with a mixture of trees, shrubs, and ground cover. Planting areas shall have round corners instead of 90 degree corners and shall be shaped to allow vehicle movements. The Director of Community Development may approve alternative barriers designed to protect landscaped areas from vehicle damage. Wheel stops may be placed to allow for two feet of vehicle overhang area within the dimension of the parking space. To increase the parking lot landscaped area, a maximum of two feet of the parking stall depth may be landscaped with low-

growth, hardy materials in-lieu of paving, allowing a bumper overhang while maintaining the required parking dimensions. However, the overhang area shall not be counted as part of the minimum landscape area required by paragraph (1) above, and when adjacent to a required landscaping strip shall be in addition to the minimum required width. Fixtures (e.g., lights, sprinklers) that are higher than the curb are prohibited within a bumper overhang area. Curbing that creates a bumper overhang barrier shall not exceed a height of five inches.

- d. Parking areas with more than 100 spaces shall provide an appropriate entry feature consisting of a concentration of landscape elements, including trees, flowering plants, enhanced paving, and project identification.
4. Parking structures. A landscaping strip 10 feet wide shall be provided on all sides of a parking structure. One tree shall be provided for each 20 to 40 feet of perimeter of the structure, based on species selected. These trees shall be distributed evenly throughout the subject landscape area.

## 8.7 Sign Standards

### A. Applicability

This section contains standards and guidelines for signage to ensure that signs are consistent with the overall quality and character of anticipated new development. Regulations identify permitted sign types; provide standards for number of signs, size, and location; and provide design guidelines for color, materials, and illumination. Refer to the Fontana Municipal Code for all sign-related information or regulations not specifically addressed in this section.

### B. Standards and Guidelines

1. Standards. The following standards shall apply to all signs, regardless of type:
  - a. Sign types not listed in this Section are not permitted.
  - b. Linear Frontage Ratio. For each establishment, one and one-half (1 ½) square feet of total sign area shall be allowed for each linear foot of building frontage. Unless otherwise noted, all signs (including temporary signs) shall count toward the total sign area permitted based on the Linear Frontage Ratio. For multi-tenant buildings, each establishment shall be calculated individually. For corner establishments, each facade shall be calculated individually. Permitted sign area based on the linear frontage of one establishment or facade shall not be placed on another establishment or facade.
  - c. Signs shall not be animated.
  - d. Commercial messages that identify, advertise, or attract attention to a business, product, service, or event or activity sold, existing, or offered elsewhere than upon the same property where the sign is displayed are expressly prohibited.
  - e. In the event of a conflict between this Section and any other City regulation, the provisions of this Section shall apply.
  - f. All issues not specifically addressed herein (signage in the public right-of-way, exempt signs, permit processing, etc.) shall be addressed pursuant to the Fontana Municipal Code.
2. Guidelines. The following guidelines shall apply to all signs, regardless of type.
  - a. Design Compatibility
    - Provide signage that is compatible with the building architecture and coordinate sign materials and colors with the building facade/storefront design.
    - Place signs in accordance with facade rhythm, scale, and proportion.
    - Ensure that signs associated with multi-tenant buildings are complementary to one another. A consistent location for tenant identification signs is recommended.

b. Location

- Signs shall be placed at or near the public entrance to a building or main parking area to indicate the most direct access to the business.
- Signs shall not be located so that they cover or interrupt the architectural details or ornamentation of a building's facade.
- Signs shall not project above the edge of the rooflines and shall not obstruct windows and/or doorways.

c. Sign Legibility

- Avoid hard-to-read, intricate typefaces. Typefaces that are difficult to read reduce the sign's ability to communicate.
- Avoid spacing letters and words too close together. Lettering shall not occupy more than 75 percent of the sign face.
- Limit the number of lettering styles in order to increase legibility. Signs shall be limited to no more than two styles for small signs (generally up to 10 square feet) and three styles for larger signs.
- Use significant contrast through incorporating light colored letters and a darker, contrasting background to provide the most visible and best-looking image.
- Incorporate business identity symbols and logos.
- Logo means any symbol or any combination thereof adopted and used by an individual or corporation to identify goods made or sold or services rendered by an individual or corporation and to distinguish them from goods made or sold or services rendered by others and that is nationally or State of California registered.

d. Color and Materials

- Bright day-glo (fluorescent) colors shall be avoided as they are distracting and do not blend well with other background colors.
- Sign colors shall relate to and complement the materials or color scheme of the buildings, including accent and trim colors.
- Sign materials shall be selected with consideration for the architectural design of the building's façade and also contribute to the legibility of the sign.
- Construct signs of durable, high-quality materials.
- Wood, paper, and cloth signs, and painted wall signs are prohibited.

e. Illumination

- Individually illuminated letters, either internally illuminated or back-lighted solid letters (reverse channel), are a preferred alternative to internally illuminated plastic-faced cabinet signs.
- Signs shall be comprised of individual letters.
- The use of backlit, individually cut letter signs is strongly encouraged for all types of business and signs, including monument-type signs.
- Whenever indirect lighting fixtures are used, care shall be taken to properly shield the light source.

f. Electrical Raceways and Conduits

- Electrical transformer boxes and raceways shall be concealed from public view.
- All exposed conduit and junction boxes shall be appropriately concealed from public view.

c. **Sign Types**

For the purposes of this plan, Table 8-9 – Sign Types indicates the signs that are allowed in the Jurupa South Industrial District.

| Table 8-9 – Sign Types |                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------|
| 1                      | <b>Grand Wall Sign</b><br>Non-residential uses with unfenestrated wall areas of 2,000 square feet or greater |
| 2                      | <b>Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                              |
| 3                      | <b>Projecting Sign</b><br>Non-residential uses with a dedicated ground floor entrance                        |
| 4                      | <b>Awning Valance Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 5                      | <b>Awning Side Sign</b><br>Non-residential uses with a dedicated ground floor entrance                       |
| 6                      | <b>Canopy Fascia Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 7                      | <b>Under-Awning or Under-Canopy Sign</b><br>Non-residential uses with a dedicated ground floor entrance      |
| 8                      | <b>Recessed Entry Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 9                      | <b>Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                            |
| 10                     | <b>Temporary Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                  |
| 11                     | <b>Temporary Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 12                     | <b>Monument Sign</b><br>Any building with continuous linear street frontage of 200 feet or greater           |
| 13                     | <b>Directional Sign</b><br>Each vehicle entrance                                                             |
| 14                     | <b>Accessory Sign</b><br>Identified specific uses                                                            |

## D. Sign Type Standards and Guidelines

This section provides Standards and Guidelines for each Sign Type.

### 1. Grand Wall Sign

Grand Wall Signs are large signs located on, and parallel to, large unfenestrated building wall areas.

#### a. Standards

- i. A Grand Wall Sign shall only be located on unfenestrated wall areas of 2,000 square feet in size or greater.
- ii. Only one (1) Grand Wall Sign shall be permitted per establishment.
- iii. The Grand Wall Sign area shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. A Grand Wall Sign shall not exceed 1,000 square feet or 25 percent of the total wall area, whichever is less.
- v. A Grand Wall Sign shall project no more than one (1) foot from the façade of the building.

#### b. Commercial Guidelines

- i. Materials used in Grand Wall Signs shall be wood, ceramic, metal, or paint only.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

#### c. Industrial Guidelines

- i. Materials used in Grand Wall Signs shall be ceramic or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

### 2. Wall Sign

Wall Signs are signs that are located on, and parallel to, a building wall. Business Identification Wall Signs are signs that announce the name of a business within a building and Building Identification Wall Signs are signs that announce the name of a building. Both are located on, and parallel to, a building wall.

1) Grand Wall Sign.

2) Building Identification Wall Sign.

a. Standards

- i. Wall Signs shall be located below the second floor and within the middle 50 percent of the building or tenant frontage measured from lease line to lease line. Building Identification Wall Signs shall be located only on the frieze or fascia (articulated banding across the top of every building floor) area of storefront level; frieze, fascia, parapet of the uppermost floor; or above the entrance to main building lobby.
- ii. No Wall Sign shall exceed 150 square feet in size. Building Identification Wall Signs shall be no taller than 24 inches in height.
- iii. Wall Signs shall count towards the total sign area permitted based on the Linear Frontage Ratio, except that the area of Building Identification Wall Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. Wall Signs shall project no more than one (1) foot from the façade of the building.

b. Commercial Guidelines

- i. Materials used in wall signs shall be wood, ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. New wall signs for individual businesses in a shopping center shall be placed consistent with the location of signs for other businesses in the center. This will establish visual continuity among storefronts and create a unified appearance for the center.
- v. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

c. Industrial Guidelines

- i. Materials used in wall signs shall be ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall signs shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only. Building Identification Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

**3. Projecting Sign**

Projecting Signs are signs that are oriented perpendicularly to the building façade and are either (1) suspended under a bracket, armature, or other mounting device or (2) are cantilevered (i.e., structurally affixed to the building).

a. Standards

- i. Projecting Signs shall only be mounted on the wall area below the second floor.
- ii. No Projecting Sign shall exceed 16 square feet in size.
- iii. Projecting Signs shall project no more than four feet from the façade of the building.
- iv. No portion of a Projecting Sign shall be lower than eight feet above the level of the walkway over which it projects.

b. Commercial and Industrial Guidelines

- i. Projecting Signs that are suspended under a bracket, armature, or other mounting device shall be wood or metal and shall be illuminated by external illumination only.
- ii. Projecting Signs that are cantilevered signs shall be wood, ceramic or metal and shall be illuminated by external illumination or halo illumination only.

3) Suspended Projecting Sign.

3) Cantilevered Projecting Sign.

- iii. Sign supports and brackets shall be compatible with the design and scale of the sign and the architectural design of the building.

#### **4. Awning Valance Sign**

Awning Valance Signs are signs applied to the awning valance and are contained completely within the valance.

- a. Standards

- i. Lettering for Awning Valance Signs shall include one (1) line of lettering not to exceed two-thirds ( $2/3$ ) the height of the valance or 12 inches, whichever is less.
- ii. Awning Valance Signs shall project no farther from the building than its associated awning.
- iii. No portion of an Awning Valance Sign shall be less than eight feet above the level of the walkway over which it projects.

4) Awning Valance Sign.

- b. Commercial and Industrial Guidelines

- i. Awning Valance Signs shall consist of metal, or vinyl or paint applied directly to the awning.
- ii. Awning Valance Signs shall be illuminated by external illumination only.
- iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
- iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
- v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
- vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

## 5. *Awning Side Sign*

Awning Side Signs are signs applied to the side panel of an awning.

- a. Standards
  - i. The area of Awning Side Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - ii. Lettering for Awning Side Signs shall not exceed 12 inches in height with total sign area not to exceed 20 percent of the area of the awning side area.
  - iii. Awning Side Signs shall project no farther from the building than its associated awning.
  - iv. No portion of an Awning Side Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial and Industrial Guidelines
  - i. Awning Side Signs shall consist of vinyl or paint applied directly to the awning.
  - ii. Awning Side Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

5) Awning Side Sign.

## 6. *Canopy Fascia Sign*

Canopy Fascia Signs are signs that are mounted to the front or side fascia of a canopy and contained completely within that fascia.

- a. Standards
  - i. The height of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) the height of the fascia or 12 inches, whichever is less.
  - ii. The width of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) of the canopy width.
  - iii. Canopy Fascia Signs shall project no farther from the building than its associated canopy.
  - iv. No portion of a Canopy Fascia Sign shall be less than eight feet above the level of the walkway over which it projects.
  - v. Canopy Fascia Signs shall consist of only one (1) line of lettering articulated as individual letters mounted directly to the canopy.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Canopy Fascia Signs shall be metal and paint only.
  - ii. Canopy Fascia Signs shall be illuminated by external illumination only.

6) Canopy Fascia Sign.

## 7. *Under-Awning or Under-Canopy Sign*

Under-Awning or Under-Canopy Signs are signs that are suspended under an awning or canopy, perpendicular to the building facade.

- a. Standards
  - i. Under-Awning or Under-Canopy Signs shall be located adjacent to a public entrance.
  - ii. No more than one (1) Under-Awning or Under-Canopy Sign shall be permitted per establishment per façade.
  - iii. The area of Under-Awning or Under-Canopy Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - iv. Under-Awning or Under-Canopy Signs shall not exceed three (3) square feet in area.

7) Under-Awning Sign.

7) Under-Canopy Sign.

- v. Under-Awning or Under-Canopy Signs shall project no farther from the building than its associated awning or canopy.
- vi. No portion of an Under-Awning or Under-Canopy Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial Guidelines
  - i. Materials used in Under-Awning or Under-Canopy Signs shall be wood or metal.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
  - i. Materials used in Under-Awning or Under-Canopy Signs shall be wood or metal.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.

## 8. ***Recessed Entry Sign***

Recessed Entry Signs are signs that are oriented parallel to the building façade and that are suspended over a recessed entry.

- a. Standards
  - i. No Recessed Entry Sign shall exceed twenty (20) square feet in size.
  - ii. Recessed Entry Signs shall not project beyond the façade of the building.
  - iii. No portion of a Recessed Entry Sign shall be lower than eight feet above the level of the walkway.
- b. Commercial Guidelines
  - i. Materials used in Recessed Entry Signs shall be wood or metal.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
  - i. Materials used in Recessed Entry Signs shall be wood or metal.

8) Recessed Entry Sign- Section View.

8) Recessed Entry Sign- Elevation View.

- ii. Recessed Entry Signs shall be illuminated by external illumination only.

**9. Window Sign**

Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window.

**a. Standards**

- i. Window Signs shall be permitted on windows below the second floor level only. A Window Sign that only identifies a building shall be located on a transom window above a primary entrance, or the glazed area of primary door.
- ii. Window signs shall count towards total sign area permitted based on the Linear Frontage Ratio, except that the area of a Window Sign that only identifies a building shall not count towards the total sign area permitted based on the Linear Frontage Ratio. One (1) Window Sign that only identifies a building shall be permitted per building per street-facing façade.
- iii. No more than 25 percent of any individual window area shall be covered or otherwise occupied by signage.
- iv. The letter height of each Window Sign shall not exceed 12 inches.

g) Window Sign.

g) Building Identification Window Sign.

**b. Commercial and Industrial Guidelines**

- i. Ground-floor Window Signs shall consist of vinyl or paint applied to the glass, neon mounted or suspended behind the glass, or framed and mounted paper signs. Window Signs that only identify a building shall consist of vinyl or paint applied to the glass only.
- ii. Ground floor Window Signs shall not be illuminated.

## 10. Temporary Window Sign

Temporary Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window and are designed, constructed, and intended for display on private property for a period of not more than 90 consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal signage.

### a. Standards

- i. Temporary Window Signs shall be located only on ground floor windows on building facades that face a public street or a parking lot.
- ii. Temporary Window Signs shall not exceed six square feet in size.
- iii. Temporary Window Signs shall not cause the total amount of the window area covered with signage to exceed 25 percent.
- iv. Temporary Window Signs that satisfy the above standards and General Standards do not require a permit.

10) Temporary Window Sign.

### b. Commercial and Industrial Guidelines

- i. Temporary Window Signs shall be constructed of paint applied directly to the glass or framed paper signs placed behind the glass.
- ii. Temporary Window Signs shall not be illuminated.
- iii. Temporary Window Signs that satisfy the above guidelines and General Guidelines do not require a permit.

## 11. Temporary Wall Sign

Temporary Wall Signs are signs that are located on, and parallel to, a building wall and are designed, constructed, and intended for display on private property for a period of not more than ninety (90) consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal temporary banner signage.

11) Temporary Wall Sign.

### a. Standards

- i. Temporary Wall Signs shall only be mounted on a wall area below the second floor level that faces a public street or a parking lot.
- ii. A maximum of one (1) Temporary Wall Sign is allowed per establishment.

- iii. No Temporary Wall Signs shall exceed 32 square feet in area.
  - iv. Temporary Wall Signs shall project no more than one (1) foot from the façade of the building.
- b. Commercial and Industrial Guidelines
- i. Materials used in Temporary Wall Signs shall consist of a flexible vinyl material with grommet holes installed around the edges to accommodate attachment to a building.
  - ii. Temporary Wall Signs shall not be illuminated.

**12. Monument Sign**

A Monument Sign is a freestanding sign supported by a solid architectural element at its base.

- a. Standards
- i. A maximum of one Monument Sign is allowed per street frontage for single-purpose buildings, multi-tenant buildings or complexes and shopping centers on a parcel with one or more street frontages of at least 100 feet.
  - ii. A Monument Sign shall not exceed eight feet in length or six feet in height.
  - iii. Monument Signs shall be placed perpendicular or parallel to the street. The base of a Monument Sign shall be set back a minimum of five feet from any public right-of-way or interior property line; a minimum of 10 feet from the edge of a driveway; and a minimum of 50 feet and from any Monument Signs or Pylon Signs on adjoining sites. Monument Signs shall not block sight lines at entry driveways and circulation aisles.
  - iv. The sign copy for a Monument Sign shall only identify the name of the center, complex, or building and the address; however, the name of the primary tenant, if any, may be included in the copy. The minimum letter size allowed shall be six inches. Sign copy shall not be located closer than one half-letter height to the sign edge or other line of copy. Between 5 to 10 percent of the sign area should be dedicated to identification of the street address.

12) Monument Sign.

- v. The area of Monument Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - vi. Monument Signs shall not project over any on-site driveway or vehicle circulation area.
  - vii. Landscaping with automatic irrigation shall be provided at the base of the supporting structure equal to twice the area of one face of the sign or 75 square feet, whichever is greater. For example, 40 sq. ft. of sign area = 80 sq. ft. of landscaped area.
- b. Commercial and Industrial Guidelines
- i. Monument Signs may be illuminated, however the sign copy shall be the only portion of the sign face that is illuminated. The sign background or field shall be opaque with a nonglossy, nonreflective finish.
  - ii. The sign area and height of the sign shall be in proportion to the site and surrounding buildings. Signs shall not be overly large so as to be a dominant feature of the site.
  - iii. Monument Signs shall incorporate architectural elements, details, and articulation as follows:
    - Provide a solid architectural base that supports the sign. The base shall be a minimum of one-foot in height.
    - Provide architectural elements on the sides and top to frame the sign pane(s). Use columns, pilasters, cornices, and similar details to provide design interest.
    - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
    - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with its adjacent building(s).

### 13. Directional Sign

A Directional Sign is an on-premise sign giving directions, instructions, or facility information of an establishment (e.g., parking signs, exit and entrance signs, etc.).

a. Standards

- i. One (1) directional sign for each vehicle entry to a site with a maximum area of three square feet per sign. Maximum sign height shall be four feet. Additional directional signs may be allowed with approval of a Comprehensive Sign Program.

b. Commercial and Industrial Guidelines

13) Directional Sign.

- i. Directional signs and their supports shall use the same color palette of the proposed building.
- ii. Directional signs shall be located to maintain sight lines along major circulation routes and shall be illuminated for visual clarity and safety.
- iii. Directional signs shall be designed with easy-to-read fonts, contrasting colors from the surrounding support panels, and durable materials.
- iv. Double-sided parking directional signs shall incorporate messaging and direction arrows on both sides of sign.
- v. Parking directional signage shall be used consistently throughout each individual development.

### 14. Accessory Signs

Accessory Signs are signs that provide incidental information about a project site or a business and its goods or services. For the purposes of this plan, Accessory Signs include:

- Directory Sign. A sign listing the tenants or occupants of a building or building complex.
- Nameplate Sign. A sign indicating the name and/or address of a building or occupant.
- Restaurant Menu Sign. Menus displayed on the exterior premises of a restaurant.
- Fuel Price Signs: One per street frontage with a maximum sign area of 12 square feet and a maximum height of four feet. Fuel price signs shall only advertise the price and grade of fuel and on other advertising shall

14) Accessory Sign.

be allowed. Located in a landscaped planter with a minimum area equal to the area of the sign.

- a. Standards
  - i. The area of Accessory Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - ii. Directory Signs: Limited to a total sign area of 10 square feet.
  - iii. Fuel Price Signs: One per street frontage with a maximum sign area of 12 square feet and a maximum height of four feet. Fuel price signs shall only advertise the price and grade of fuel and no other advertising shall be allowed. Located in a landscaped planter with a minimum area equal to the area of the sign.
  - iv. Nameplate Sign: One non-illuminated sign not to exceed one square foot in area.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Accessory Signs shall be wood and metal.
  - ii. Accessory Signs shall be illuminated by internal or external illumination as appropriate.

## **8.8 Public Right-of-Way Streetscape**

This section establishes standards for streetscape landscaping improvements within the public rights-of-way along the major highways, primary highways, and secondary highways as identified in the General Plan, Circulation Master Plan, as well as district gateway/intersection enhancements. The intent of these streetscape improvement concepts, and gateway enhancements is to provide a “sense of place” or identity within each district, while interweaving the standards and tree palettes that may be provided by any overriding City Master Street Tree Plan.

### **A. Street Classifications**

Streets within the JSD are classified as follows:

1. Major highways:
  - a. Six-lane major highways – Etiwanda Avenue and Jurupa Avenue.
  - b. Modified six-lane residential adjacent major highway – Mulberry Avenue.
  - c. Modified six-lane no median major highways – none within JSD.
  - d. Eight-lane major highways – none within JSD.
2. Primary highways
3. Secondary highways – Marlay Avenue and Philadelphia Avenue.
4. Collector streets – none within the JSD.

### **B. General Design Criteria**

The following general design criteria are intended to articulate consistent landscape treatments on similar classifications of corridors and provide a hierarchy of conceptual treatments for district gateway/intersection enhancements.

1. Landscaping should be used to accentuate and frame important view corridors.
2. Landscaping shall employ a common three-tiered approach to design:
  - a. Trees
  - b. Shrubs, vines and tall grass-like materials
  - c. Groundcovers (does not include turf)
3. Landscaping should be consistent and accentuated along arterial corridors and gateway intersections to emphasize district areas.
4. Street trees on major highways shall consist of on-center planting of deciduous trees in medians (whenever medians are required) and evergreen trees in parkways to provide

seasonal variations of views during fall and winter months (clearer air and snow-capped peaks).

5. Secondary highways shall provide single species of evergreen trees planted in parkways.
6. Gateway intersection enhancements should incorporate the adjacent property tree species (used in buffer setback) in order to provide background and screening, and be enhanced with accent trees selected for their character and shape.
7. Primary and secondary gateways will include thematic monumentation for district identification and reflect elements of local identity (i.e. river rock, concrete, City logo, etc.).
8. All gateway intersection enhancement shall incorporate decorative paving at corner areas and plant materials that promote the best of water-efficient landscaping.

### **C. Streetscape Concept**

The Streetscape Concept Plan for the entire Specific Plan area is shown on Exhibit 8-4. The plan identifies major, primary, and secondary highways, as well as collector streets and the gateway intersections within the Specific Plan area. Roadway classifications are consistent with the General Plan, Circulation Master Plan.

1. **Major Highway Streetscape.** Major highway streetscapes define the image of the City and its districts, while providing arterial linkages within and beyond the City. There are four streetscape concepts for major highways: Six-Lane Major Highway, Modified Six Lane No Median Major Highway, Modified Six Lane Residential Adjacent Major Highway, and Eight-Lane Major Highway. These major highway streetscapes are designed in response to special design needs, right-of-way, and adjacencies. Major highways within the JSD are short sections of Etiwanda Avenue, Jurupa Avenue, and Mulberry Avenue. Streetscape cross-sections are in Exhibits 8-5 and 8-6.
2. **Primary/Secondary Streetscape.** Primary/Secondary highway streetscapes define areas within the Specific Plan and its districts, and connect to the major thoroughfares throughout the City. There are no primary highways within the JSD. Secondary highways within the JSD are Marlay Avenue and Philadelphia Avenue. A streetscape cross-section is in Exhibit 8-7.

3. Gateways

**A. Concept Plan**

The Streetscape Concept Plan – Exhibit 8-4 identifies a hierarchy of primary, secondary, and tertiary gateways. The intent of the gateway intersection enhancements is to provide a visual statement that you are within the Specific Plan area.

The gateway intersection enhancements should all incorporate uniform treatments (to varying degrees) within expanded corner setback areas (45 degree diagonal right-of-way). Depending on the hierarchy level, each gateway shall include special corner/sidewalk paving, planting schemes that highlight drought tolerant species, and monumentation signage. Monument signs are optional on tertiary gateway intersections.

Each corner planting scheme shall incorporate the three-tiered planting concept, consisting of accent trees, shrubs, or tall grass-like plant material, and a ground cover. Dense planting of evergreen tree species consistent with adjacent buffer setback plantings shall provide a background/screen for each corner setback area.

Gateway conceptual designs with typical dimensions (plan views) are illustrated in Exhibits 8-8, 8-9, and 8-10. The monument sign concept as it would appear in front of the planting treatment is illustrated in Exhibit 8-11.

Gateway enhancements and monument sign enhancements shall meet the City's line of sight regulations, as determined by the City Engineer. Dimensions of monument signs shall comply with Section 7.7.D.13 Monument Sign.

**B. Dedication and Maintenance of Gateway Intersection Improvements**

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for district gateway improvements in Section 8.8 Public Right-of-Way Streetscape, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standards indicated in Section 8.8 Public Right-of-Way Streetscape; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.

- c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure the installation and perpetual maintenance of the Gateway Intersection Enhancements.

Enhancement Concept

Exhibit 8-10 – Secondary Gateway Intersection Enhancement Concept

Exhibit 8-11 – Tertiary Gateway Intersection Enhancement Concept

*See Section 8.7.D.12 for dimension*

Exhibit 8-12 – Monument Sign Concept

#### 4. **Street Furniture**

Exhibit 8-12 – Street Furniture Palette identifies recommended street furniture components, including lighting, trash receptacles, and benches, for the district. The palette is intended to ensure a unified visual identity for the district, which is distinct from the other districts within the Specific Plan area.

## **8.9 Design Guidelines**

### **A. Design Objectives**

The Design Guidelines will promote and reinforce the City's commitment to high quality development. In general, the guidelines are intended to ensure that development preserves or improves the positive characteristics of the City's image. The objectives of these guidelines are to:

- Promote orderly development by implementing the SWIP Specific Plan objectives, policies, and principles found in Chapter 2.0 Policy Framework.
- Protect and enhance property values by ensuring that development fits properly within the context of its surroundings and does not negatively impact adjacent uses.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian and motor vehicle circulation within a project and convenient pedestrian linkages to and from adjacent residential, commercial, industrial, and school areas.

### **B. Design Intent**

The design intent of the JSD is to provide for high quality design of large-scale development including industrial, manufacturing, and logistics-oriented distribution and warehousing. The design guidelines encourage innovative site design and architecture which accommodate large spaces necessary for the function of the building while relating to the context of the surrounding districts.

### **C. Industrial, Distribution, and Business Park Uses**

The design guidelines in this Subsection shall apply to industrial, distribution, and business park development within this land use district.

### 1. Site Design

#### Site Layout

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street.
  - Parking in front of building with a landscape buffer between parking and street. **See Figure 1.**

Figure 1. Appropriate building and landscape placement adjacent to public street.

- Visitor parking may be located at the front of the building adjacent to the main entry while employee parking and service areas are located at the sides and rear of the building. **See Figure 2.**

Figure 2. Parking layout.

- Service and loading should not be located on building side(s) adjacent to a public street.
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal is prohibited.
- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. **See Figure 3.**

#### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.). **See Figure 4.**
- Business park development should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

Figure 3. Appropriate location of loading areas.

Figure4. Open space amenities.

## 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets. **See Figure 5.**
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest. **See Figure 6.**
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between sensitive uses (i.e. schools, residential, parks, and medical facilities) and outdoor work areas, loading and storage.

## 3. Site Elements

### Fences and Walls

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed. **See Figure 7.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall.

Figure 5. Buildings are oriented to create gateway into development.

Figure 6. Buildings are oriented to provide architectural features visible from public rights-of-way.

Figure 7. Tubular steel and stone pillars are appropriate fencing materials.

- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti. **See Figure 8.**

### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 9.**
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from public view. **See Figure 10.**

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 11.**
- Trash enclosures shall integrate horizontal screening such as trellises. **See Figure 11.**

Figure 8. Wall is articulated with pillars and incorporates landscaping at the base and vines to deter graffiti.

Figure 9. Appropriate placement, orientation and screening of service areas.

Figure 10. Screening of roof mounted equipment.

Figure 11. Trash enclosures with architectural screening elements.

## Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets, and to prevent light spillover onto adjacent properties. **See Figure 12.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 13.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building. **See Figure 14.**
- Truck and truck trailer storage areas shall incorporate lighting to increase real and perceived security.

Figure 12. Hooded light fixture directs light downward.

Figure 13. Bollard lighting along pedestrian walkway.

Figure 14. Decorative light fixtures.

#### 4. Parking and Access

##### Parking

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts. **See Figure 15.**
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 15.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside of the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 16.**
- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 17.**

##### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts. **See Figure 18 (following page).**

Figure 15. Parking lot landscaping.

Figure 16. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 17. On-site storm water capture system.

Figure 18. Shared parking access.

- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 19.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

Enhance project entries with landscaping and special paving for visual impact.

Figure 19. Entry drive.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses (e.g. schools, etc.).
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 20.**

Figure 20. Incorporation of vertical offsets and material changes.

## Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest. **See Figure 21.**
- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 22.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 23.**
- Primary building entries shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a building's entry. **See Figure 24.**

Figure 21. Façade articulation.

Figure 22. Use of cornices, window trim and grooves.

Figure 23. Enhanced corner elements.

Figure 24. Articulated Entries.

- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 25.**
- Locate and/or screen rooftop equipment so that it is not visible from the street. Rooftop screening shall be integral to the building's form.

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.
- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color. **See Figure 26.**
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.

### 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) ground cover and flowering plants;
  - 2) shrubs and vines; and
  - 3) trees.**See Figure 27.** See Recommended Plant Palette in Section 8.5.

Figure 25. Offset roof planes.

Figure 26. Use of expansion joints.

Figure 27. Three-tiered planting system: trees, shrubs, and ground covers.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. Incorporation of public art is highly encouraged.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection .
- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls. Water features and public art are also encouraged. **See Figure 28.**
- The use of vines on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 29.**

Figure 28. Plaza area.

Figure 29. Wall incorporates landscaping to soften appearance and deter graffiti.

- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction. **See Figure 30.**

Figure 30. Plant material along buffer wall.

- Landscaping and trellises with vines are encouraged be used for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to sensitive uses shall include dense landscaping to provide visual screening and noise abatement.
- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 31.**
- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area. **See Figure 32.**

Wall, landscaping and berms screen industrial buildings and storage

Figure 31. Landscaped berms.

Figure 32. Landscaped parking lot.

- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/stormwater treatment features and bioswales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 33.**
- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

Figure 33. On-site water filtration.

## D. Commercial Uses

### 1. Site Design

#### Site Layout

- The arrangement of multiple buildings and associated circulation and parking shall reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas that enhance publicly-accessible spaces. **See Figure 34.**
- Loading areas, access and circulation driveways, trash enclosures, storage areas, and rooftop equipment shall be located as far as possible from sensitive uses.
- Buildings may be located adjacent to the street with a fully landscaped setback or buildings may be set back with limited parking in front. **See Figure 35.**

#### Courtyards and Plazas

- The organization and design of buildings shall encourage and facilitate pedestrian activity.
- Buildings should be organized to create usable open space, courtyards, plazas and dining areas. **See Figure 36.**

Figure 34. Site plan emphasizes pedestrian connectivity.

Figure 35. Limited parking adjacent to street with landscape setback.

Figure 36. Buildings create courtyard.

- Pedestrian-oriented open spaces, courtyards and plazas shall include a focal element such as a sculpture and/or water feature and sitting areas. **See Figure 37.**

## 2. Building Orientation

- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Commercial buildings on corner parcels shall establish a strong tie to both streets and should encourage pedestrian activity at corner locations. **See Figure 38.**
- Buildings associated with service retail and restaurant uses shall be pedestrian-scaled, with entries fronting onto streets, plazas or courtyards to reinforce pedestrian orientation.
- Buildings adjacent to sensitive uses (e.g. schools) shall be buffered. This may be accomplished by providing masonry walls, landscaped berms, appropriate building orientation, building height stepbacks and limitations on activities adjacent to sensitive uses. **See Figure 39.**

Figure 37. Open plaza areas with seating.

Figure 38. Commercial/retail buildings on corners should establish strong tie to the street.

Figure 39. Masonry wall and landscaping separates uses.

- Commercial and retail buildings should generally be placed at or near setback lines with developments oriented in a manner that will provide visual interest.
- Buildings should be oriented in a manner that takes advantage of passive solar design to the maximum extent feasible.

### 3. Site Elements

#### Fences and Walls

- Wall heights and surfaces shall be articulated with varying façade depths or pilasters to promote architectural interest, and may include a cap along the top of the wall. **See Figure 40.**
- Walls visible from public streets shall be decorative and complement the design of on-site buildings.
- Wall and fencing materials may consist of brick, stone, stucco, wrought iron or tubular steel. Wall and fencing colors should match building colors, with neutral earth tones. **See Figure 41.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

Figure 40. Wall incorporates pilasters and cap.

Figure 41. Stone wall.

## Screening

- Service and delivery areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 42.**
- Outdoor mechanical equipment should be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. **See Figure 43.**

Figure 42. Screened delivery area.

Figure 43. Screening of roof-mounted equipment.

## Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site.
- Trash enclosures visible from the public view shall integrate horizontal screening such as trellises.

## Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.

- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets, and to prevent light spillover into adjacent properties. **See Figure 44.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 45.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures. **See Figure 46.**
- Decorative light fixtures are encouraged, as long as fixtures are consistent with the architectural design of the building. **See Figure 47.**

Figure 44. Hooded light fixture directs light downward.

Figure 45. Bollard lighting along pedestrian walkway.

### 4. Parking and Access

#### Parking

- Parking lots should be designed with a clear hierarchy of circulation: major access drives with no direct access to parking spaces; major circulation drives with little or no parking; and parking aisles for direct access to parking.
- Large commercial and retail parking areas should be located behind building facades so as not to be visible from major streets.
- Parking lots shall not be the dominant visual element on the site.

Figure 46. Pole mounted light.

Figure 47. Decorative light fixtures.

- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 48.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat gain and the visual impacts of large parking areas.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 49.**
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 50.**

#### Access - Vehicular

- Site access shall promote safety by providing an adequate stacking distance for vehicles between the back of the sidewalk and the first parking stall or circulation aisle.
- Conflict between vehicles and pedestrians shall be avoided at access driveways by providing a walkway on at least one side of the driveway.
- The number of access driveways shall be minimized and located as far as possible from street intersections.
- Site access locations shall be coordinated with existing or planned median openings and driveways on the opposite side of the roadway.

Figure 48. Landscaped parking lot.

Figure 49. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 50. On-site storm water capture.

- Unobstructed line of sight at corners and driveways shall be provided to reduce vehicular conflicts. **See Figure 51.**
- Avoid placing primary vehicle access in close proximity to major building entrances in order to minimize pedestrian and vehicular conflicts. **See Figure 52.**

### Access - Pedestrian

- Clearly defined pedestrian walkways or paths should be provided from parking areas to primary building entrances. Clear and convenient pedestrian access shall be provided between the public sidewalk and the pedestrian areas of the development. **See Figure 53.**
- Raised walkways, decorative paving, landscaping and/or bollards shall be used to separate pedestrian paths from vehicular circulation areas. **See Figure 54.**

Figure 51. Unobstructed sight lines.

Figure 52. Vehicle access is placed away from building entrances.

Figure 53. Clearly defined pedestrian walkways.

Figure 54. Raised walkway and landscaping in parking lot.

- Parking areas should be designed so that pedestrians walk parallel to moving cars. **See Figure 55.**

### Loading and Delivery

- Loading and delivery service areas shall be located and designed to minimize their visibility, circulation conflicts, and adverse noise impacts to the maximum extent feasible.
- Loading and delivery service areas shall be screened with portions of the building, architectural wing walls, freestanding walls or landscape planting.
- Loading areas shall be designed to not interfere with circulation or parking, and to permit trucks to fully maneuver on the property without backing from or onto a public street. **See Figure 56.**
- Service, loading and delivery areas should take access from planned shared access points to reduce curb cuts along project frontages.

## 5. Architecture

### Mass and Scale

- The mass and scale of new infill developments shall be compatible with the existing, adjacent structures. This can be accomplished by transitioning from the height of adjacent buildings to the tallest elements of the new development by stepping back the upper portions of taller buildings.
- Human-scale elements, such as pedestrian-scaled doors, windows and building modules shall be used to emphasize pedestrian orientation.

Appropriate

Inappropriate

Figure 55. Pedestrian circulation.

Figure 56. Loading area placed behind building outside of circulation lanes.

- The size and location of various building elements (e.g., roofs, parapet walls, wing walls, etc.) shall be in scale to the building as a whole and provide visual interest. **See Figure 57.**

### Building Facades

- Buildings shall include enhanced and articulated facades along public streets.
- Design details shall be continued or repeated upon all building elevations.
- Building entrances should be readily identifiable. The use of recesses, projections, columns, and other design elements to articulate entrances are encouraged. **See Figure 58.**
- Facades shall provide visual interest with vertical and horizontal variations in wall and roof planes, building projections, door and window bays, arcades, and similar elements/techniques. **See Figure 59.**
- Buildings shall undergo a break in façade approximately every 40 feet, to create a varied wall surface along public areas. Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale should be considered for the remainder of the building spanning public right-of-way frontage.
- Buildings should include vertical elements (e.g., clock tower, building articulation) that create points of visual interest when viewed from the public right-of-way.
- Roof designs that are visually interesting and designed to completely screen all rooftop equipment from public street view are required. **See Figure 60.**

Figure 57. Building elements add visual interest.

Figure 58. Building Entry.

Figure 59. Horizontal and vertical articulation.

Figure 60. Full roof screens all equipment and provides visual interest.

- Buildings should use large windows along walls and skylights in rooftop designs to capture natural light during operating hours.
- The interior areas of commercial development should have shaded or covered walkways.

### Storefronts

- Storefronts shall be comprised predominantly of transparent surfaces (windows). **See Figure 61.**
- The use of clear glass (on the first floor) is strongly encouraged.
- Storefront windows shall be large and a minimum of 24 inches off the ground. The maximum bulkhead (wall plane between the ground and the bottom of the windows) height should be approximately 36 inches.
- Storefront entries should promote a sense of entry into the structure as well as provide a sense of shelter by incorporating elements such as overhangs, canopies, awnings, and recesses. **See Figure 62.**
- If security grilles are necessary, they shall be placed inside the building behind the window display area at a minimum distance of two feet behind the window.
- Product storage racks shall not block views through storefront windows.

### Colors and Materials

- The use of a coordinated three-color palette for the base color and major and minor trim accents is encouraged.
- Colors for all structures on-site should be varied and should consist of neutral, earthy tones. **See Figure 63.**

Figure 61. Storefront windows.

Figure 62. Storefront overhangs provide a sense of shelter and entry.

Figure 63. Use of neutral earth tones.

- Exterior finish materials shall be appropriate for the architectural style and/or theme of the entire development and should contribute towards a high quality image. **See Figure 64.**
- Changes in materials shall occur at inside corners to make building volumes appear substantial. **See Figure 65.**
- Materials shall be varied to provide architectural interest, however, the number of materials shall be limited and not exceed what is required for contrast and accent of architectural features.
- Exterior materials and architectural details shall relate to each other in ways that are traditional and logical. For example, heavy materials should appear to support lighter ones. **See Figure 65.**

## 6. Landscaping

### Plants and Irrigation

- Landscaping should help complete the design of the site and enhance the quality of commercial developments by framing and softening the appearance of buildings, screening undesirable views, and buffering incompatible uses.
- Landscaped areas should generally incorporate planting utilizing a three tiered system:
  - 1) ground covers (including flowering plants—annuals and perennials),
  - 2) shrubs and vines, and
  - 3) trees.**See Figure 66.**

Figure 64. Exterior finish materials

Figure 65. Heavy materials at base of building with lighter materials above.

Figure 66. Example of three tier landscape system.

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. **See Figure 67.**
- Planting materials shall be used in plazas or gathering areas to provide shade and soften the appearance of hard surfaces. Water features and public art are also encouraged in these places. **See Figure 68.**
- Trees located along street frontages shall be selected to match or complement existing or proposed street trees in the public right-of-way.
- A minimum five-foot landscape strip shall be used along circulation aisles in parking lots, and along building side/rear elevations if a walkway is not used. A landscape strip is also encouraged in nonpublic areas and service areas between pavement and buildings.
- On-site water filtration features and bioswales are strongly encouraged, and can also be used as buffering methods for adjacent businesses.
- Drought tolerant and low-water trees, vines, and groundcovers shall be used on-site. When feasible, drip irrigation systems shall be installed to provide on-site vegetation with appropriate irrigation and ensure the highest possible volume of water conservation.
- Planting materials shall be used to provide a buffer against noise, and may be integrated with walls or fences to achieve desired sound reduction and appearance.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.

Figure 67. Highlighting entry points.

Figure 68. Public plaza area within commercial development incorporates water feature.

- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### Site Furniture

- Outdoor furniture and fixtures (e.g., lighting, directional signs, trellises, raised planters, works of art, benches, trash receptacles, fencing, etc.) shall be integral elements of the building and landscape design. **See Figure 69.**
- Outdoor furniture shall be of a sturdy construction to withstand daily use. Wood should be avoided.
- Outdoor furniture shall be located so it will not conflict with the pedestrian and motor vehicle circulation patterns. **See Figure 70.**
- Outdoor seating should be shaded.

Figure 69. Trellis.

Figure 70. Outdoor furniture outside of pedestrian walkway.

### Paving

- Decorative paving shall be incorporated into courtyards, plazas, pedestrian walkways, and crosswalks. **See Figure 71.**
- Paving materials shall complement the architectural design of the building and landscape design of the project. The use of stamped concrete, stone, brick, permeable pavers, exposed aggregate, or colored concrete is encouraged. The use of slippery materials (e.g., polished marble or granite) is prohibited.

Figure 71. Enhanced paving in pedestrian areas.

### ***E. Flex-Tech Multi-Use Facility***

The design guidelines in this Subsection shall apply to all flex-tech projects within this land use district.

#### **1. Site Design**

##### **Site Layout**

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public realm.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street.
  - Parking in front of building with a landscape buffer between parking and street.
- Visitor parking may be located at located near the front/visitor entries to the businesses, while employee parking and service areas are located at the sides and rear of the building.
- Service and loading area should not be located on building side(s) adjacent to a public street. Service and loading areas should be located to the rear of the buildings or in the interior of a multiple building complex. **See Figure 72.**

Figure 72. Loading and service areas accessed between buildings in a multiple building complex.

- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. Accessory buildings such as equipment enclosures or storage buildings should be minimized. These service areas should be incorporated into the building design to the greatest extent feasible. **See Figure 73.**
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal containers are prohibited.
- Noise-generating activities and storage areas shall be located as far as possible from adjacent properties. Sound attenuation walls shall be used where appropriate to reduce noise.

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.). **See Figure 74.**
- Larger developments should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

Figure 73. Appropriate location of loading areas.

Figure 74. Outdoor seating area provided between buildings.

## **2. Building Orientation**

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets.
- Retail and office space should be located on the front of the building, visible from the public realm and adjacent to visitor parking. Flex areas used for warehousing, distribution, light manufacturing, research and development and other uses without a visitor component should be located to the sides or rear of the building.
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest.
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between surrounding properties and outdoor work areas, loading, and storage.

## **3. Site Elements**

### **Fences and Walls**

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way.
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.

- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall.
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti.

### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from visitor areas and adjacent public streets.
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. **See Figure 75.**

Figure 75. Screening of roof mounted equipment.

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 76.**
- Trash enclosures shall integrate horizontal screening such as trellises.

Figure 76. Trash enclosures with architectural screening elements.

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing

and planned) so that appropriate lighting levels are maintained over time.

- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and adjacent to residential zones, and to prevent light spillover onto adjacent properties.
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety.  
**See Figure 77.**

Figure 77. Lighting along pedestrian walkway.

- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building.

#### **4. Parking and Access**

##### **Parking**

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect.

- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside of the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 78.**
- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 79.**

### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts.
- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 80.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

Figure 78. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 79. On-site stormwater capture system.

Figure 80. Entry drive.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses (e.g., residential, schools, etc.).
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 81.**
- Buildings should be designed to accommodate a wide range of uses, from office to small scale retail and service to light manufacturing. Interior spaces should allow for a variety of configurations, combining and dividing spaces as needed based on the uses.

Figure 81. Façade articulation.

### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest.
- All building elevations, whether front, side, or rear shall be architecturally detailed.

- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 82.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 82.**
- The orientation of windows in buildings adjacent to a residential zone shall preclude a direct line of sight into residential properties.
- Visitor entries to retail and office uses shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a space's entry. **See Figure 83.**
- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 84.**

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.
- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color.

Figure 82. Enhanced corner elements.

Figure 83. Awnings articulate entries to tenant spaces.

Figure 84. Offset roof planes.

- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.

## 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and shall be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) trees;
  - 2) shrubs and vines; and
  - 3) ground covers

See suggested Plant Palette in Table 6-6.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection.
- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls.

- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 85.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction.
- Landscaping and trellises with vines are encouraged for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to residential zones shall include dense landscaping to provide visual screening and noise abatement.
- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 86.**
- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area.
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.

Figure 85. Wall incorporates landscaping at the base.

Figure 86. Landscaped berm buffers parking.

- Run-off retention and on-site water filtration/stormwater treatment features and bioswales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 87.**
- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection.
- Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

Figure 87. One site water filtration.

## F. Special Commercial Uses

### 1. Drive-Through Businesses

#### Site Design

- The predominant feature along the street frontage should be the building, not parking lots or the drive-through aisle.
- The building shall be located to maximize the distance for vehicle queuing while screening the drive-through operations. **See Figure 88.**
- Drive-through aisles shall be located in the rear of the building away from the street frontage whenever possible. If the drive-through aisle is located between the building and the street, dense landscaping and landscaped berms or a screen wall (42 inches high or less) shall be provided to screen the drive-through aisle from street view. **See Figure 89.**

#### Building Design

- All building elevations shall receive the same level of architectural detailing.
- Buildings shall incorporate roof designs with built-in equipment wells or other built-in screening methods, so that screening devices do not appear added-on.
- If the drive-through facility is a pad building within a shopping center, the architecture shall relate to and be compatible with the design of the center. The only feature that identifies the franchise shall be the company's logo and signs.

Figure 88. Vehicle queuing.

Figure 89. Example of appropriately landscaped and screened drive-through aisle.

## 2. Mini-Storage Facilities

### Site Design

- Offices and customer service areas shall be located adjacent to the street frontage to provide convenient access and help visually break up the front façade.

### Building Design

- Long, flat, unarticulated walls shall be avoided along street frontages. **See Figure 90.**
- Building walls and screen walls shall incorporate substantial articulation, and changes in plane and height to add visual interest.
- A minimum of two different building materials shall be used on building walls and screen walls adjacent to street frontages (e.g., stucco, brick, stone).
- Building materials, textures and landscaping shall be chosen to deter graffiti.

Figure 90. Articulated wall of mini-storage facility.

## 3. Parking Garages

### Site Design

- Where appropriate, parking garages should incorporate ground floor retail adjacent to the public sidewalk. **See Figure 91.**
- A minimum 5-foot wide landscaped strip shall be provided on all sides of the parking structure except where ground floor retail space is provided.

Incorporate retail or other compatible uses on ground floor whenever possible.

Figure 91. Liner shops.

### Building Design

- Parking garages shall be designed to help reduce the mass and scale of the garage and to ensure their compatibility with surrounding uses.

- Conceal view of vehicles in the garage through a combination of screen walls and plantings. **See Figure 92.**
- Avoid a monolithic appearance. This can be accomplished as follows:
  - Minimize horizontal and vertical banding by balancing both horizontal and vertical elements.
  - Use simple, clean geometric forms, and coordinated massing.
  - Step back upper levels of the garage 5 to 10 feet above the first floor. **See Figure 93.**
- Coordinate openings in the parking garage with the size and modulation of adjacent windows, structural bays, and storefronts if the parking garage contains other uses.
- Size openings in the parking garage to resemble large windows as in an office building.
- Use masonry materials that are predominantly light in color, but avoid unpainted concrete.
- Avoid a sloping ramp appearance by providing level and uniform wall planes between floors.
- Visually define and differentiate between pedestrian and vehicular entrances through appropriate architectural detailing. **See Figure 94.**

### Access and Circulation

- Vehicle stacking areas for entering and exiting traffic shall be sufficient in length to minimize traffic backup into surrounding streets or within the garage. A minimum of two vehicle lengths of stacking distance shall be provided between the back of the sidewalk and the control gate.

Figure 92. Parking structure with landscaping.

Figure 93. Horizontal and vertical articulation breaks up parking structure elevation.

Figure 94. Paving differentiates between pedestrian and vehicular entries.

- One inbound lane shall be provided for a garage with a capacity of up to 500 vehicles. At least two inbound lanes shall be provided for garages with a capacity of more than 500 vehicles.
- The maximum aisle length shall not exceed 400 feet without providing a cross aisle.
- Ramp grades shall not exceed 10 percent and parking areas should not exceed a slope of four to five percent.

### **Security and Lighting**

- The design of the garage shall eliminate possible hiding places and openings that could allow random pedestrian access.
- During periods when parking activity is substantially less than the garage capacity (i.e., during night operations), there shall be a means of securing unused parking levels from use, including stairwells and elevators. If the garage is not operated on a 24-hour basis the entire facility shall be secured from access during hours when the facility is closed.
- For security reasons, at least one or two sides of the stair tower shall include glass running vertically the height of the tower. Elevators shall be provided with glass-back cabs and shafts. **See Figure 95.**
- Stairs and elevators shall be located adjacent to a street on the exterior of the structure where lobbies can be exposed to outside view.
- The use of security cameras is required.
- A minimum of five foot-candles shall be provided inside the structure and a minimum of three foot-candles for exterior parking areas. Higher levels are recommended for remote areas subject to security problems such as stairways, elevators, and other pedestrian access points.

Figure 95. Glass-back elevator cab and shaft.

- Lighting levels shall be equally distributed to provide uniform illumination over all parking areas.
- Light sources shall be shielded so that the source of the illumination is not seen from outside the structure.

### 4. Shopping Centers

#### Site Design

- Portions of primary buildings and/or freestanding satellite buildings shall be located at the street setback lines to enclose the site and help frame the street. **See Figure 96.**
- Buildings within the center shall have a logical spatial and functional relationship to each other and shall provide for convenient pedestrian circulation throughout the center.
- Parking shall be provided within convenient walking distances of all tenants. Walking paths to buildings from the public street shall be provided. **See Figure 97.**
- To reduce the visual impact of large paved areas, parking lots shall be broken up into smaller areas separated by landscaping, pedestrian circulation areas and drive aisles.
- Storage areas and loading facilities shall be limited in number and shall be designed, located, and screened to minimize their visibility from outside public areas and surrounding streets.

Figure 96. Buildings placed at street setback lines.

Figure 97. Walking paths.

## Building Design

- Buildings, hardscape, landscape, site furnishings and signage should reflect a unified theme. **See Figure 98.**
- Long, linear buildings shall be avoided. Where such buildings are unavoidable, their length shall be mitigated by changes in building height, wall plane, and spatial volumes and by varied use of window areas, arcades, roof elements, and building materials. **See Figure 99.**
- If the shopping center contains a large scale building, integration of smaller-scale shops along the exterior of the building with entrances from the exterior of the building are desirable in order to create a more human scale and pedestrian-oriented character.
- Side and rear elevations of commercial buildings that are visible from public rights-of-way shall be architecturally consistent with the front elevations of the building.
- Blank walls adjacent to main pedestrian areas shall be avoided.
- Flat roofs, mansard roofs, and veneer parapets are strongly discouraged in favor of full, pitched roof treatments. In large centers, a combination of flat roofs with decorative cornices and full, pitched roofs may be acceptable if the design presents a balanced appearance. **See Figure 100.**

Figure 98. Unified theme.

Figure 99. Articulation along wall plane.

Figure 100. Appropriate roofing.

- All roof-top and ground-mounted equipment shall be screened from view.
- Outdoor sales and storage areas shall be designed to blend with the architecture of the main building. The height of the screening elements shall be tall enough to screen all stored materials. **See Figure 101.**

Figure 101. Outdoor sales area.

### **8.10 Development Incentives**

This Section offers development incentives to produce greater land use efficiencies and reduce incremental costs for new development.

#### **A. Applicability**

The incentives in this Section shall apply to all new development that meet(s) the applicable eligibility criteria.

#### **B. Definitions**

For the purposes of this Section, lot consolidation shall have the following meaning:

1. Lot consolidation. A legal action in which a lot line is removed or abandoned; a lot line is adjusted; lots are merged; or other equivalent action is taken, for the purpose of allowing a structure or development to be built so that it extends over what were previously two or more separate lots. A lot consolidation cannot create additional lots and cannot make existing lots nonconforming. All lots must be identical in ownership.

#### **C. Lot Consolidation and Lot Integration Incentives**

1. Eligibility requirements. In order to be eligible for the by-right development incentives indicated in Subparagraph 2, below, the minimum consolidated or integrated lot size for a development shall be 97,500 gross square feet.
2. By-right incentives. Eligible projects shall receive one or more of the following incentives:
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review), irrespective of the number of lots involved.
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 8.6 Parking and Loading Standards, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio [FAR]) and in maximum height shall be in the amounts listed in Table 8-10 – Allowable Bonuses for Lot Consolidation or Integration. The intensity and height bonus incentives shall apply to the total gross square footage of the consolidated lots or integrated lots.

|                   |
|-------------------|
| <b>Table 8-10</b> |
|-------------------|

| Allowable Bonuses for Lot Consolidation or Integration |                                  |                    |                               |
|--------------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                            | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.5                                                    | 10%                              | 60 ft              | 15 ft                         |

#### **D. Green Building Incentives**

1. **Eligibility requirements.** Projects that are seeking green building certification by a third-party entity (e.g., LEED, etc.) shall be eligible for the by-right development incentives indicated in Subparagraph 2.
2. **By-right incentives.**
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review).
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 8.6 Off-Street Parking and Loading, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio (FAR) and in maximum height shall be in the amounts listed in Table 8-11 – Allowable Bonuses for Green Building. The intensity and height bonus incentives shall apply to the total gross square footage of the project site.

| Table 8-11<br>Allowable Bonuses for Green Building |                                  |                    |                               |
|----------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                        | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.5                                                | 10%                              | 60 ft              | 15 ft                         |

#### **E. Application and Review Process for Incentives.**

1. Written submittal. Interested parties shall submit a written request for approval of incentives to the Director of Community Development on forms provided by the Community Development Department.
2. Determination. The Director of Community Development shall determine whether the proposed new development meets the eligibility criteria in Paragraphs C.1. or D.1. Additional factors to be considered when reviewing applications for incentives shall include the following:
  - a. Detriment. The proposal will not detrimentally affect access, design, or other public safety and welfare concerns.

- b. Covenants or conditions. The proposal will not violate restrictive covenants contained on the face of the final plat or conditions of plat approval.
  - c. Right-of-way easements. The proposal will not invalidate any easement(s) unless the adjustment establishes replacement easement(s) that is properly filed with the city.
- 4. Conditions. Conditions may be imposed in connection with the granting of any incentive where the Director of Community Development deems that conditions are necessary to protect the public health, safety, and welfare.

### **8.11 Entitlement Procedures**

#### **A. Purpose**

These administrative procedures have two major purposes:

1. Ensure that development conforms to the SWIP Specific Plan ("Plan").
2. Ensure that the City's review is as expedited as possible while remaining legal and proper.

#### **B. Summary of Processing Procedures**

1. Conformity with the Plan. The Director of Community Development shall review each application for conformity with the development regulations in this Chapter. *Conformity* has two components:
  - a. Standards. Compliance with the Standards is mandatory and the City may not approve a project that fails to comply with the Standards.
  - b. Guidelines. The City may exercise discretion in evaluating the project's compliance with the Guidelines.
2. Project Review. Applications for development approvals shall be filed with the Department and will be returned for revision. Applications must strive to meet the "Guidelines," but applicants may propose alternate ways to achieve the goals of the Guidelines.
3. Timing of Permits and Approvals. Required planning approvals shall be obtained before the issuance of any grading, building, or other construction permit, and before the proposed use is constructed, otherwise established, or put into operation.
4. Processing Requirements. Applications for planning permits shall be processed in compliance with Table 8-12 – Hearing Bodies.
5. Timing of Project Review. Project review shall be required before the issuance of a Building or Grading Permit, Business License, or Certificate of Occupancy for any new structure (not including fences or walls) and/or existing structures to be reconstructed or remodeled (including facade improvements).

Table 8-12 – Hearing Bodies

| Reviewing Bodies                       |        |      |    |    |     | Appeal Body |    |
|----------------------------------------|--------|------|----|----|-----|-------------|----|
|                                        | D.A.B. | CD   | PC | CC | PR  | PC          | CC |
| Administrative site plan               | X*     | X    |    |    |     | X           |    |

**Notes:**

Decisions of any "Reviewing Body" may be appealed to the City Council, except where State law limits such appeal to the City Engineer. If the Planning Commission is listed above as the "Appeal Body", the Commission must first review an Appeal before it may be forwarded to the City Council for consideration.

DAB—Development Advisory Board

CD—Community Development Director

PC—Planning Commission

CC—City Council

PR—Parks and Recreation Commission

X\*—At the discretion of the Director of Community Development or his/her designee

X\*\*—If Public Park(s) are considered

X\*\*\*—City Engineer has final approval

f—Recommending body to the City Council

**C. Administration and Enforcement**

The Director of Community Development shall enforce the provisions in this Specific Plan. All officers, employees, and officials of the City of Fontana, who are vested with the duty or authority to issue permits or licenses shall conform with this Specific Plan and shall not issue any permit or license, or approve any use or building, which would be in conflict with this Specific Plan. Any permit, license or approval issued that is in conflict with the requirements of this Specific Plan shall be considered null and void.

**D. Amendments to the Specific Plan**

The SWIP Specific Plan may be amended utilizing the same procedures by which it was originally adopted. In addition, subsequent amendments to this Specific Plan shall demonstrate the amendment meets the intent of the Specific Plan's existing policy framework, or specific findings to demonstrate the amendment enhances the Plan or is necessary to more effectively implement the Specific Plan. All sections or portions of the Specific Plan proposed to be amended or that may be affected by the amendment must be identified during the amendment process. A concurrent amendment to the General Plan would not be required provided that the Director of Community Development determines that substantive changes would not influence the goals, objectives, policies, or programs of the General Plan.

Allowing flexibility in the administration of the Specific Plan enhances the effectiveness of the Specific Plan as a comprehensive, "living" planning document. The following minor modifications to the Specific Plan qualify for processing as an administrative amendment to the Specific Plan subject to the review and approval of the Director of Community Development:

- Changes in the location of infrastructure and public facilities (e.g., internal roads, drainage facilities, etc.).
- Minor change in roadway alignment.

**E. Similar Use Determination**

1. **Applicability and Authority.** Unlisted uses in Table 8-2 are prohibited uses, unless the Director of Community Development finds a proposed use to be similar to an expressly allowed use in compliance with this Section. A Similar Use Determination is a process for determining when an unlisted use is similar in nature to a permitted or conditionally permitted use and may be permitted. As specified by Municipal Code Section 30-4 Other Uses to be Determined by the Director of Community Development, the Director of Community Development shall have the responsibility and authority to make Similar Use Determinations.
2. **Ministerial Action.** A Similar Use Determination shall constitute a ministerial action.
3. **Application Contents and Filing.** An application for similar use shall be in writing on forms provided by the Director of Community Development.
4. **Determination Findings.** In determining "similarity," the Director of Community Development shall make all of the following findings:

- a. The characteristics of and activities associated with the proposed use are equivalent to one or more of the listed uses and will not involve a higher level of activity or environmental impacts than the uses listed in the land use district;
  - b. The proposed use will be consistent with the purposes of the applicable land use district; and
  - c. The proposed use will be consistent with the General Plan and this SWIP Specific Plan.
5. Notice. A Similar Use Determination shall be made in writing and shall contain the facts that support the determination. The Community Development Department shall maintain all determinations on record for review by the general public upon request. The notice shall include:
  - a. A brief statement explaining the criteria and standards considered relevant to the decision;
  - b. A statement of the standards and facts relied upon in rendering the decision; and
  - c. An explanation of appeal rights and appeal deadlines. The determination of similar use by the Director of Community Development shall be subject to appeal to the Planning Commission.

***F. Nonconforming Lots, Structures, and Uses***

1. Nonconformance provisions are established to:
  - a. Bring all uses, structures, sites and signs into conformance with the developmental requirements and design guidelines in the Code;
  - b. Limit the occurrences and extent of nonconformance by prohibiting expansion, intensification, reinstatement, alteration, restoration after destruction, and reestablishment after abandonment; and
  - c. Gradually phase out nonconforming uses, structures, lots, and signs.
2. Applicability
  - a. Nonconforming uses, structures, signs and lots may be maintained, expanded, altered and/or abated only in accordance with the provisions of this Specific Plan.
  - b. Any Designated Historic Landmark, or any property listed on the California Register of Historical Resources or National Register of Historic Places, shall be exempt from the provisions of this Section with respect to the restoration and maintenance of structures, provided that any construction plans are approved through a Certificate of Appropriateness by the Historic Preservation Commission/Planning Commission.

3. Nonconforming Uses. A use that lawfully occupied a building or land at the time this Specific Plan became effective, and that does not conform to the use regulations of the land use district in which it is located, is deemed a "legal nonconforming use." A legal nonconforming use may continue, subject to the following:
  - a. Discontinuation of Use
    - i. Loss of legal nonconforming status. If a legal nonconforming use is discontinued for a period of 90 or more days, regardless of the owner's intent, it shall lose its legal nonconforming status and the continued use of the property shall be required to conform to all provisions of this Specific Plan.
    - ii. Extension of legal nonconforming status. Wherein special circumstances exist, the Director of Community Development may extend the legal nonconforming status of a use, for up to an additional 90-day period. Furthermore, an additional extension may be granted by the Planning Commission, for up to an additional 90-day period. The total time period of all time extensions shall not exceed 180 days.
    - iii. Extension of legal nonconforming use.
      - (1) An application for a Minor Use Permit shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
      - (2) The application shall be reviewed by the Director of Community Development within 30 days following application filing. The Director of Community Development shall notify the applicant, in writing, as to whether the application is complete. If the application is not complete, the Director of Community Development shall specify those parts of the application that are not complete and shall identify the manner by which it can be made complete. If written notification is not provided to the applicant within 30 days following application filing, the application shall be deemed complete.
      - (3) The Director of Community Development shall investigate the facts bearing on the application and provide the information necessary for action on the application, consistent with this Specific Plan and the General Plan. The applicant shall have made a good faith effort through the submittal of documentation and has diligently pursued compliance with this Specific Plan.
      - (4) The application shall be reviewed by the Director of Community Development at a duly noticed public hearing, whom shall then approve, modify or deny such application. The decision of the Director of Community Development shall be final and conclusive in the absence

of a timely filed appeal to the Planning Commission. An appeal of the Director of Community Development's decision shall be filed within 10 days from the date of the decision of the Director of Community Development. An appeal of the Director of Community Development's decision shall be reviewed by the Planning Commission. The decision of the Planning Commission shall be final and conclusive in the absence of a timely filed appeal to the City Council.

- (5) The applicant may appeal the decision of the Planning Commission to the final deciding body, the City Council. The City Council decision shall be final and conclusive. If the application to extend the legal nonconforming use is approved by the City Council, the extension shall be granted for 90 days from the date of approval.
- (6) If the Director of Community Development or appointed designee has determined that the applicant has failed to show a good faith effort towards continually processing the extension of legal nonconforming use application (i.e., revising plans, withdrawing the application, placing the project on hold, etc.), the legal nonconforming use shall cease within 60 days from the application submittal date.
- (7) In granting an extension of the legal nonconforming status, the Director of Community Development may attach reasonable conditions and restrictions to the request, in addition to those required by this Specific Plan, which will ensure that the use:
  - Will not endanger the public health, safety or general welfare;
  - Will not injure the value of adjoining or abutting property;
  - Will not result in any significant environmental impacts; and
  - Will be in harmony with the area in which it is located.
- (8) In approving an extension of the legal nonconforming status, the Director of Community Development or Planning Commission shall consider and clearly establish the following findings of fact:
  - The non-conforming use has been discontinued within the 90-day period.
  - A physical and/or economic hardship has prevented the nonconforming use from being in compliance prior to the expiration of the 90 day period;
  - Approving the extension will not adversely affect the health, safety or general welfare.

- b. Change in Ownership, Tenancy or Management. A change in ownership, tenancy or management of a nonconforming use shall not affect its legal nonconforming status, provided that the use did not discontinue pursuant to Section (3.a.i) "Loss of legal nonconforming status" or the type of use and/or intensity of use do not change.

- c. New Development. New development on any lot or parcel upon which a legal non conforming use exists shall require that all uses on the property conform to the provisions of this Specific Plan.
  - d. Alterations and Expansion of Use
    - i. A nonconforming use shall not be enlarged or extended in such a way as to occupy any part of any structure or property that it did not occupy prior to the creation of the nonconformity.
    - ii. A structure fully or partially occupied by any nonconforming use shall not be moved, altered or enlarged, unless required by law, or unless the moving, alteration or enlargement will result in the elimination of the nonconforming use.
  - e. Intensification of Use. A nonconforming use shall not be intensified in such a way as to increase the discrepancy between existing conditions and the standards set forth in this Specific Plan.
4. Nonconforming Structures. A structure lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of the land use district in which it is located, including setbacks, separations, height and design, is deemed a "legal nonconforming structure." A legal nonconforming structure may continue to exist, subject to the following:
- a. Damage or Destruction
    - i. A legal nonconforming structure that is damaged or partially destroyed by fire, flood, wind, earthquake or other calamity, or the public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented by reasonable care and maintenance of the structure, may be reconstructed up to the original size, placement and density, provided that total cost of such reconstruction does not exceed more than 50 percent of the structure's current fair market value. The structure may be restored and the nonconforming use may be resumed, provided that restoration is started within six months, unless extended by the Director of Community Development, and diligently pursued.
    - ii. In the event that the cost of repairing such damage exceeds 50 percent of the current fair market value of the structure prior to such damage occurring, the structure may be reconstructed up to the original size, placement and density, subject to all of the following:
      - The Planning Commission, at a duly noticed public hearing, must find that continuing the nonconforming structure will not result in an annoyance to and/or reduction of any surrounding property; and

- The extent of damage or partial destruction shall be based upon a comparison of the estimated cost of restoring the structure to its condition prior to such damage or partial destruction with its value at the time the structure was damaged or partially destroyed. Estimates for such purpose shall be made by or reviewed by the Building Official; and
- The restoration is commenced within six months and diligently pursued to completion.
- An application for a Nonconforming Structure shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
- A structure or development that has been damaged or destroyed by fire, flood, wind, earthquake, or other calamity, or by public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented may be reconstructed up to the original size, placement and density, except a multiple family dwelling or development which has been abandoned for a period of 90 or more days prior to being involuntarily damaged or destroyed, or a multiple family dwelling or development constituting a public nuisance prior to being involuntarily damaged or destroyed may not be reconstructed unless the structure is made to comply to all provisions of this Specific Plan.

b. Alterations and Expansion

- i. A nonconforming structure shall not be moved, altered or enlarged so as to increase the discrepancy between existing conditions and the most current standard as prescribed by the land use district in which the structure is located, except alteration and/or enlargement to a single family dwelling conducted pursuant to section ("e") Nonconforming Single-Family Residential Structures".
- ii. Within land use districts, reasonable repairs and alterations may be made to legal nonconforming structures, provided that no structural alterations shall be made which would prolong the life of supporting members of a structure, such as bearing walls, columns, beams or girders. Structural elements may be modified only if such modification or repair is immediately necessary to protect the public health and safety, occupants of the legal nonconforming structure, or adjacent property, as determined by the Building Official. The total cost of such repairs or alterations may not exceed 50 percent of the replacement cost of the nonconforming structure.

- c. **New Structures.** Any new structure constructed on a lot or parcel with an existing legal nonconforming structure shall be constructed in conformance with all applicable provisions of this Specific Plan. However, in no case may a new nonresidential structure be constructed on the same lot as an existing legal nonconforming residential structure.
- d. **Abatement of Nonconforming Structures Posing a Threat to the Public Health, Safety and General Welfare.** A structure which is nonconforming because of a violation or deficiency that poses a threat to the public health, safety or general welfare, as determined by the Building Official, and which fails to resolve, repair or improve such, or to fully mitigate the hazard involved, shall be abated, condemned or demolished upon the issuance by the City of a nuisance abatement, condemnations or demolition order.
- e. **Nonconforming Single-Family Residential Structures.** In addition to the requirements of subsections a and d, above, a nonconforming single family residential lot and/or structure that was lawfully established and maintained before the adoption of this Specific Plan, but which under the provisions of this Specific Plan does not conform with the regulations of the land use district in which it is located with respect to use, design and/or development standards, and which is continuously used and maintained for single family residential purposes, shall be subject to the following:
  - i. **Alterations and expansions to structures within nonresidential zones.**
    - Necessary repairs and desirable alterations, as deemed appropriate by the Director of Community Development, may be made to a legal nonconforming single family residential structure that is nonconforming as to use.
    - A single family dwelling that is nonconforming as to its location within a land use district that does not permit single family dwellings, and in which the residential use was lawfully established and continuously maintained, shall be subject to the development regulations of the Municipal Code Chapter 30 Zoning and Development Code that pertain to the R1 zoning district and off-street parking and loading regulations.
- 5. **Nonconforming Signs.** A sign lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of Section 8.7 Sign Standards, is deemed a "legal nonconforming sign." A sign that presents a hazard to public safety, as determined by the City, shall be removed upon the issuance of a notice by the City. A legal nonconforming sign may continue to exist, subject to the following:
  - a. A nonconforming sign may not be altered, enlarged, extended, or moved, except in conformity with the requirements of Section 8.7 Sign Standards, or as otherwise required by law;

- b. Where a use or a structure associated with a nonconforming sign is abandoned or discontinued, any sign associated with a new use of the site shall be in full conformity with the requirements of Section 8.7 Sign Standards.
- 6. Nonconforming to Development Standards. The development that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area, coverage, configuration, dimensions, parking, landscaping, screen walls, fences and enclosure trash receptacles, is deemed "legal nonconforming," provided such development was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A development that is nonconforming as to landscaping, screen walls, fences and enclosure of trash receptacles, shall be altered to comply with the district regulations covering the following standards, or as a condition of any subsequent Development Plan or Conditional Use Permit approval:
- 7. Nonconforming Lots. A lot or parcel that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area and configuration is deemed a "legal nonconforming lot," provided such lot or parcel was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A lot or parcel that is nonconforming as to minimum area or dimension shall be granted all development rights and uses of the land use district within which it is located.
    - i. The landscaping of setback areas insofar as a setback exists;
    - ii. The landscaping of parking areas, provided fulfilling the requirement does not reduce off-street parking or loading spaces to fewer than prescribed in this Specific Plan;
    - iii. The screening of storage areas; and
    - iv. The enclosure of trash receptacles.
- 8. Elimination of Nonconforming Adult Business Uses. Nonconforming adult business uses shall be eliminated in compliance with Municipal Code Chapter 30 Zoning and Development Code.
- 9. Abatement of Nonconforming Uses, Structures, Lots and Signs. Whenever a use, structure, site or sign becomes nonconforming because of a change of land use district boundaries or a change of the regulations prescribed for the district in which the site is located, the period of time prescribed in Municipal Code Chapter 30 Zoning and this Specific Plan for the abatement period for the elimination of the use, the removal of the structure or sign, or the improvement of the lot or parcel shall begin on the effective date of the change of district boundaries or regulations.

## Chapter 9.0 – Slover Central Manufacturing District

| Exhibit 9-11 | Monument Sign Concept .....                                                            | 9-58 |
| Exhibit 9-12 | Street Furniture Palette .....                                                         | 9-59 |

This page intentionally left blank

### **9.1 Purpose**

The Slover Central Manufacturing District (SCD) is intended to provide opportunities for light and heavy manufacturing activities that are supported by trucking routes and the existing rail spur.

## **9.2 Applicability**

### **A. Projects Subject to Development Regulations**

This Chapter contains the development regulations that govern all future private development actions in the SCD, including new construction, additions or renovations to existing structures and/or new land uses proposed for existing facilities

### **B. Right of Continued Use**

This Chapter shall not require any change in any existing building or structure for which a building permit has been previously issued, or for approved plans on file in the Community Development Department before the effective date of this Specific Plan. Changes in the property's ownership or tenants of legal existing uses shall likewise require no change in any existing building or structure. Nonconforming standards and provisions shall be governed by Section 9.11 Entitlement Procedures.

### **C. Other Requirements**

This Chapter does not eliminate the need for obtaining any other permits required by the City, or any permit, approval or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.

### **D. Types of Development Regulations**

The Development Regulations are of two types – Standards and Guidelines – as follows:

1. Standards address those aspects of development that are essential to achieve the goals of the Specific Plan. They include specifications for allowable land uses and site development (e.g., building height, setbacks, etc.). Conformance with Standards is mandatory. Standards are indicated by use of the words "shall," "must," or "is / is not permitted."
2. Guidelines provide guidance for new development in terms of aesthetics and design details. They are intended to direct building and site design in a way that results in the desired character for the SCD. Whereas conformance with the Standards is mandatory, conformance with the Guidelines is preferred and/or recommended. Provisions that fall into this category are indicated by the use of the words "should," "may" or "are encouraged to." In various cases, the Guidelines provide a choice of treatments that will achieve the desired effect. Developers are permitted to propose alternative design details if they are able to show that such details implement the overall Specific Plan objectives with respect to the desired character of the SCD.

### **E. Minimum Requirements**

The provisions in this Chapter shall be minimum requirements. When this Chapter provides for discretionary authority on the part of the Director of Community Development, Planning Commission, or City Council, that discretion may be exercised to impose more stringent requirements if deemed necessary to accomplish the goals and objectives of the SCD.

### **F. Overview of Development Regulations**

1. Relationship of Land Use Districts. The development regulations in this Chapter apply to properties in the SCD. Exhibit 9-1 – Land Use Plan indicates the location of the SCD and its relationship to the other land use districts in the Specific Plan area.
2. Standards, Guidelines, and Procedures. The development regulations are divided into the following sections: 11.3 Allowable Land Uses and Permit Requirements; 11.4 Development Standards; 11.5 Landscape Standards; 11.6 Off-Street Parking and Loading Standards; 11.7 Sign Standards; 11.8 Public Right-of-Way Streetscape; 11.9 Design Guidelines; 11.10 Development Incentives, and 11.11 Entitlement Procedures. Projects must meet all development standards in order to achieve approval in the development review process. Projects are encouraged to adhere to the guidelines contained in 11.9 Design Guidelines.
3. Steps for Using Chapter. Table 9-1 – Process Procedures illustrates the steps for using this Chapter.

| Table 9-1 – Process Procedures                                                                                              |                                                        |                                      |

# Southwest Industrial Park Specific Plan

Slover Central Manufacturing District

Exhibit 9.1 – Land Use Plan

### **9.3 Allowable Land Uses and Permit Requirements**

This Section identifies allowable land uses and their permit requirements.

#### **A. Allowed Uses**

Table 9-2 – Allowable Land Uses and Permit Requirements SCD identifies the types of land uses allowed in the SCD and the permit required to establish each use.

#### **B. Uses Not Listed**

Uses not listed in Table 9-2 are prohibited land uses, until and unless the Director of Community Development makes a similar use determination in compliance with Subsection 9.11.C Entitlement Procedures--Similar Use Determination.

#### **C. Other Applicable Regulations**

The provisions contained in this SWIP Specific Plan constitute the primary land use and development standards for the Specific Plan area. These regulations are in addition to the provisions in the City of Fontana Municipal Code.

This Specific Plan provides all development standards and guidelines necessary to approve subsequent project applications, unless otherwise noted. Permit processing procedures (e.g., noticing, hearing, appeals, and expiration procedures) and enforcement procedures are provided in Municipal Code Chapter 30 (Zoning and Development Code) shall apply, unless otherwise noted. Where there is a conflict between the provisions in this Specific Plan and those in the Zoning and Development Code, the Specific Plan provisions shall prevail to the extent allowable under Federal or State law. Where there is no conflict, both shall be applied concurrently.

#### **D. Definitions**

Definitions for land uses are provided in Appendix A Definitions. If a definition is not provided, the definitions in the Municipal Code shall apply. The Director of Community Development shall interpret the definitions; make a similar use determination in compliance with Subsection 9.11.C Entitlement Procedures – Similar Use Determination; and/or refer any questions to the Planning Commission for its determination. For the purposes of this Specific Plan, the following definitions shall apply:

1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
2. Industrial Use: Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

(2) See Section 9.4D

## 9.4 Development Standards

New land uses and structures and alterations to existing land uses and structures in the SCD shall be designed, constructed, and established in compliance with the requirements in this Section.

### A. Intensity and Dimensional Standards

Table 9-3 – Intensity and Dimensional Standards provides the required intensity and dimensional standards for proposed development. The Director of Community Development is authorized to approve modifications of 10 percent or less of any land use district setback, lot width, lot depth, building coverage, building height, or wall height standard in compliance with the administrative variance procedures in Municipal Code Section 30-51.6 (Findings necessary for granting a variance). See Exhibit 6-2 – Dimensional Standards.

The Director of Community Development may grant an administrative variance from the requirements of this chapter where practical difficulties, unnecessary hardships, or results contrary to the intent of this chapter would occur from the strict and literal interpretation and enforcement of the Code. An administrative variance may be granted upon conditions which will ensure the protection of the public safety, health and welfare. To grant an administrative variance, the Director of Community Development must find from the facts presented that the following conditions exist.

- (1) That because of circumstances applicable to the property including size, shape, topography, location or surroundings, the strict application of this chapter will deprive the property of privileges enjoyed by other property in the vicinity and under identical zoning classification;
- (2) That the granting of such an administrative variance will be subject to conditions assuring that the variance shall not constitute a grant of special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district in which the property is located;
- (3) That the administrative variance does not authorize a use or activity which is not a specifically allowed use in the zoning district in which the property is located; and
- (4) That the granting of one administrative variance will not be contrary to the general plan.

Table 9-3 – Intensity and Dimensional Standards

| Lot Size and Building Placement                        |                                                      |

Exhibit 9-2 – Dimensional Standards.

**B. Fences, Walls, and Screening**

1. Standards and Guidelines. Table 9-4 contains standards for fences, walls, and screening. Refer to Section 9.9 Design Guidelines for guidelines about the design, materials, and construction of fences, walls, and screening.

**Table 9-4 – Standards for Fences, Walls, and Screening**

| <i>Location</i>                                    | <i>Materials<br/>See Section 9.9 Design Guidelines</i>                                                                                                         | <i>Maximum Height</i>                                                                                     |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Within front setback area                          | Solid fencing/wall                                                                                                                                             | 36 inches                                                                                                 |
|                                                    | Open fencing/wall                                                                                                                                              | 6 ft                                                                                                      |
| Within street side setback area                    | Tubular steel construction allowed in required setback area if set back at least 15 ft from lot line. Solid masonry wall not allowed in required setback area. | 8 ft if necessary for security purposes, with 18-inch maximum width pilasters a minimum of 8 ft on center |
| Within interior side setback area                  | Any type of fence, hedge, or wall allowed                                                                                                                      | 8 ft                                                                                                      |
| Within rear setback area                           | Any type of fence, hedge, or wall allowed                                                                                                                      | 8 ft                                                                                                      |
| Outside of a required setback area                 | Solid or open fencing/wall                                                                                                                                     | No height limit                                                                                           |
| At intersections of alleys, streets, and driveways | Solid or open fencing/wall                                                                                                                                     | 30 inches                                                                                                 |
| Within Railroad setback area                       | Open fencing/wall                                                                                                                                              | 8 ft                                                                                                      |

Note: (1) All fences and walls shall meet the City's line of sight regulations, as determined by the City Engineer.

2. Materials.
  - a. Open fencing shall mean fencing with over 50 percent of the surface area open for free passage of light and air and through which the area behind the fence is visible to public view. See Exhibit 9-3 – Open and Solid Fencing.
  - b. Solid fencing shall mean fencing with 50 percent or less of the surface area open for free passage of light and air and designed to conceal the area behind the fence from public view. See Exhibit 9-3 – Open and Solid Fencing.
  - c. Barbed wire fence, electric fences, or similar fencing material is prohibited.
  - d. Chain link fencing is allowed on interior property lines that are not visible from public rights-of-way.

### *Examples of Solid Fencing*

Exhibit 9-3 – Open and Solid Fencing.

3. Screening and buffering.

- a. Roof-mounted and ground-mounted mechanical equipment, utilities, storage, and solid waste storage areas shall be screened from adjoining properties and public right-of-ways by a visual barrier (e.g., wall, fence, landscape material, etc.) to the satisfaction of the Director of Community Development. Where only landscaping is used for screening, it shall be planted with five-gallon (minimum size) shrubs spaced to provide a continuous dense screen.
- b. Parking lot perimeters shall be screened and planted in compliance with Section 9.6 Parking and Loading Standards.

**C. Outdoor Activities and Storage**

- 1. Storage in Setback Areas. Material or equipment shall not be stored anywhere in the front yard. Temporary storage of construction materials during construction on the same site is allowed. Boats, campers, motor vehicles, trailers, equipment, materials, or antenna that may be stored in side and rear yards, provided that they are outside the required side and rear setback areas identified in Table 9-3 – Intensity and Dimensional Standards.
- 2. Limitations on Outdoor Uses.
  - a. All uses shall be conducted entirely within a completely enclosed building that is attached to a permanent foundation, except approved outdoor dining areas, parking areas, industrial activities, truck trailer storage, and other approved uses that require outdoor activities.
  - b. Areas used for the approved outdoor storage of vehicles, equipment and/or building materials (raw or finished) may use compacted slag, gravel, or other similar material deemed suitable by the Director of Community Development.
- 3. Outdoor uses. Outdoor uses shall comply with the following:
  - a. A building shall be provided on the same parcel or on an adjacent parcel associated with the same business.
  - b. All display materials, including vehicles, shall be set back five feet from any landscaped area and shall not be located on required parking areas.
  - c. The entire area used for display purposes shall be surfaced with asphalt or an equally serviceable hard pavement surface. The surface shall be maintained in good condition.
  - d. Storage of equipment or materials, with the exception of the display of vehicles for sale or rent, shall be screened by a visually solid masonry wall of minimum height six feet. The approving authority may determine through the design review process that the subject use requires a solid masonry wall higher than six feet.
  - e. Outdoor display areas shall be maintained in a neat and orderly condition.

**D. Caretaker Housing**

Caretaker housing shall be:

1. Accessory to a principal use;
2. A maximum of 1,500 square feet total floor area unless otherwise approved by the planning commission;
3. Limited to one unit per lot; and
4. Subject to the setback requirements applicable to the principal structure with which it is associated.

**E. Solar Access**

A structure, fence, or wall shall not be constructed or modified, and vegetation shall not be placed or allowed to grow so as to obstruct more than 10 percent of the absorption area of a solar energy system on an abutting or adjacent lot at any time.

**F. Undergrounding of Utilities**

1. Utility service laterals to new development shall be installed underground.
2. Temporary overhead power and telephone facilities are permitted only during construction.
3. Placement, location and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.
4. Transformer enclosures shall be designed of durable materials with finishes and colors used that are compatible and harmonious with the overall architectural theme.
5. All utilities including, but not limited to drainage systems, sewers, gas lines, water lines, and electrical, telephone, and communications wires and equipment shall be installed and maintained underground. Placement, location, and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission before any administrative or discretionary approval.

**G. Registered Vehicle Storage**

Registered vehicle storage will be defined as follows:

Registered Vehicle Storage means an off-street, ground level open area that allows parking for the purpose of storage of vehicles, including but not limited to, truck, truck-trailer, buses, boats, construction equipment, recreational vehicles, and automobile

storage. These vehicles are to be stored and are not for sale, rental, or leasing. Maintenance or vehicle repair is not permitted at the premises unless otherwise separately allowed and approved under a separate conditional use permit.

Special use regulations are proposed to be applied to Registered Vehicles Storage. All businesses with registered vehicle storage shall comply with the following provisions:

1. The entire storage area shall be surfaced with asphalt, cement or an equivalent material. For specified and delineated storage areas, excluding required drive aisles and required non-storage parking, slag or gravel shall be considered as an equivalent paving material on a case-by-case basis. The surface material shall be striped as required (when feasible) and shall be maintained in good condition.
2. All storage areas shall clearly be identified on the site plan for the property and shall be screened from view from the public right-of-way by one or more decorative block screening walls. All screening walls adjacent to a public right-of-way shall have a minimum height of eight (8) feet and shall not be located in a required landscape setback area. Additional wall height and/or berming may be added as needed to satisfy screening requirements.
3. A line-of-sight analysis clearly demonstrating that all registered vehicles proposed to be located in the storage area(s) are screened from view from all adjacent public rights-of-way at all times shall be required with all proposals and/or applications. For the purpose of the line-of-sight analysis, the assumed height of the vehicles to be stored shall be fourteen feet and six inches (14'6"). To meet this requirement, storage areas shall be set back from required screening walls to provide the required line-of-sight clearance for screening. Storage areas which have been set back to provide the required line-of-sight clearance for screening shall be identified on the site plan and shall be marked and maintained at all times in a manner consistent with the site plan.
4. All vehicles stored on the premises shall have a valid vehicle registration from the State of California or other similar government entity and shall be maintained in an operable condition at all times.
5. Fire access lanes of a minimum twenty-six feet (26') in width shall be required along the interior perimeter of any required decorative block screening wall adjacent to a public right-of-way. Additional fire access lanes shall be provided as required by the Fire District. This required fire access lane may be used to meet the line-of-sight clearance set back requirement above.
6. All on-site fire access lanes, drive aisles, required parking, etc., (but not including identified and marked vehicle storage areas) shall be paved with asphalt, cement or an equivalent material; gravel or slag in these lanes is specifically prohibited.
7. A guard station or similar structure shall be required near the primary access to the premises. The minimum size of such structure shall be sixteen square feet.
8. A residence for a caretaker may be permitted and incorporated into the project subject to the approval of a Conditional Use Permit application.

9. Permanent on-site security lighting shall be required to be designed and installed to the standards and satisfaction of the Police Chief or his/her designee.
10. Fire hydrants shall be required to the satisfaction of the Fire District.
11. Vehicles stored on the premises shall not themselves be used as storage containers to store materials in them. With prior 72 hour written notice to the property and/or business owner, any and all stored vehicles shall be open to inspection for the purpose of enforcing this provision.
12. To provide adequate space dimensions to accommodate the movement off large vehicles on the site, the minimum lot size shall be two (2) acres with a minimum lot width of 300 feet and a minimum lot depth of 300 feet. Irregular or unusually shaped lots may require additional minimums to meet the intent of this regulation, as shall lots with unusual, irregular, or severe topographic features or changes.
13. Landscaping adjacent to the public right-of-way is required per the Code. Interior lot landscaping shall not be required for any internal area (wall perimeter, parking area, storage area, etc.) enclosed by the required screening walls. Incidental landscaping may be required as needed to satisfy screening and other requirements in interface area(s) open to public view (entry gate, guard station, etc.)

## 9.5 Landscape Standards

### A. Required landscaping

This section provides the required minimum standards for all landscaped areas within any new and rehabilitated private development.

1. Landscaped area means the entire parcel less the building footprint, driveways, nonirrigated portions of parking lots, and hardscapes (such as driveways, approaches and sidewalks). Decorative hardscapes used to enhance the landscape will be considered as part of the landscape area; this would include such things as cobble rock, decomposed granite, brickwork, stamped concrete, gravel, pavers, and water features.
2. Landscape setbacks along public right-of-ways shall incorporate landscape buffers with undulating and variable height earth-mounding (berms), and/or low walls, and required plant materials as shown in Table 9-5 (Landscaping Standards).
3. Block wall and wrought iron fencing shall be located behind landscape setback area(s).
4. The developer shall submit to the City's Department of Engineering, a Landscape Documentation Package that conforms to the requirements of the Water Efficient Landscape Ordinance in Municipal Code, Chapter 28Vegetation.
5. All new development landscaping shall comply with the standards shown in Table 9-5 – Landscape Standards. Additional guidelines that should be considered are addressed in Section 9.9 Design Guidelines.
6. The Recommended Plant Materials Palette, Table 9-6, can be found immediately after this section. The plant materials palette is provided to ensure the installation of drought-tolerant, water efficient landscaping that will provide wind breaks and thrive in the local climate conditions. In an effort to provide visual elements that distinguish this district from others, please note that turf (grass) does not appear in the Plant Materials Palette, and shall be prohibited, in lieu of drought-tolerant ground covers.
7. Public right-of-way improvements, including street improvements, streetscape/landscape (parkway) improvements, and street tree requirements, are in Section 9.8 Public Right-of-Way Streetscape.

**Table 9-5 – Landscape Standards**

*Note: The Director of Community Development Director may require additional setbacks.*

|                                                                                                      |                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| Shrubs                                                                                               | 50% - 5-gallon<br>50% - 1-gallon                                                                                                                                                                                                                                                                                       |
| Groundcover                                                                                          | 12-inch maximum on center spacing that will cover area within one year of initial planting                                                                                                                                                                                                                             |
| Street trees in parkways per Master Plan of Parkway Trees                                            | 1 tree of not less than 24-inch box size for each 30 linear feet of street frontage<br><br>In parkways of inadequate width, street trees shall be planted in abutting setback/yard, in addition to the required buffer landscaping in setback area                                                                     |
| Landscape buffer in front setback area                                                               | 1 tree for each 20 linear feet minimum of street frontage and three 5-gallon shrubs for each tree<br><br>Undulating earth berms with informal tree and shrub massing and/or low decorative walls may be utilized<br><br>Maximum slope: 3:1 for berms                                                                   |
| Additional landscape requirements                                                                    | 1 tree for each 800 square feet minimum of other required landscaped area and 8 shrubs for each tree.                                                                                                                                                                                                                  |
| Landscape Buffer<br>Front setback area and street-side setback area                                  | Major Highway: 30 ft minimum width<br>Primary Highway: 25 ft minimum width<br>Collector/Local Streets: 20 ft minimum width                                                                                                                                                                                             |

**B. Recommended Plant Materials Palette**

Table 9-6 – Recommended Plant Materials Palette provides a listing of primarily drought-tolerant trees, shrubs, and ground covers to provide water efficient landscaping in new projects. The limited selection of landscape material in the palette is envisioned to assist the user in incorporating sustainable landscaping into the project, while including enough variety of size, form, and density, to meet the requirements within buffer setbacks and screening techniques. . Final selection shall be approved by the City. The Director of Community Development shall approve artificial turf.

*Lantana montevidensis*

## 9.6 Off-Street Parking and Loading Standards

### A. Applicability

This section contains regulations for off-street parking and loading. Regulations identify required number of parking and loading spaces for all new development projects and those proposing substantial modification to existing buildings. Refer to Municipal Code Chapter 30 (Zoning and Development Code) for all parking and loading-related information or regulations not specifically addressed in this section.

### B. General Parking and Loading Regulations

1. Methods of Calculation.
  - a. Multiple Uses. If more than one use is located on a site, the total number of required off-street parking and loading spaces shall be the sum of the requirements for the various uses computed separately. If individual uses on the same site have a floor area less than that for which loading spaces would be required, then the total gross floor area of all uses on the site or lot shall be used in determining the required number of loading spaces.
  - b. Fractional Number. Whenever the computation of the required number of off-street parking or loading spaces results in a fractional number, one additional space shall be required for a fraction of more than one-half, but shall not be required for a fraction of one-half or less.
2. Off-Site Location. Required off-street parking spaces shall be located on the same property as the use that they are intended to serve. Where the required parking spaces cannot be accommodated on the same property, they may be located in a separate off-site parking facility that is not more than 300 feet from the use(s) they serve.
3. Shared Use. Required off-street parking and loading spaces shall not be considered as providing parking or loading spaces for any other use, except where shared use facilities are approved in compliance with Subparagraph 5 Adjustments to Parking Requirements, below.
4. Uses Not Specified. For uses not specified, the Director of Community Development shall determine parking requirements based upon the requirements of the most similar use. See SubSection 9.11.C Entitlement Procedures -- Similar Use Determination.
5. Adjustments to Parking Requirements.
  - a. Administrative Variance. The Director of Community Development is authorized to approve alternate parking plans involving a modification of 10 percent or less of any of the off-street parking and loading standards in compliance with Section 30-51.5 of Municipal Code Chapter 30.
  - b. Parking Study Option. An applicant may submit a separate parking and loading study for new development to the Director of Community Development for review.

A parking and loading study shall provide sufficient data and information to justify the need for adjustments to the parking and loading requirements and shall analyze whether:

- i. Adequate off-street parking will be provided for the project;
  - ii. The project demonstrates the use of creative design concepts, including but not limited to shared parking facilities, transit accessibility, pedestrian amenities, and bicycle amenities;
  - iii. Environmental impacts associated with the project will not be increased by the modification of standards; and
  - iv. Traffic safety and pedestrian safety will be enhanced by the modifications.
- c. **Shared Use Facility.** Required off-street parking and loading spaces may be considered as providing parking or loading spaces for another use where joint facilities serving more than one use contain no less than the total number of spaces deemed necessary for each individual use added together with other uses. Where adjoining uses on the same site have different hours of operation with minimal conflict, the Director of Community Development may determine that some or all of the same spaces may be counted as satisfying the requirements for both uses, provided that the number of spaces shall not be less than the prescribed for the use requiring the greater number.

***C. Required Number of Parking Spaces***

Each land use shall provide the number of off-street parking spaces indicated in Table 9-7 – Parking Requirements by Land Use, except where adjustment has been granted in compliance with Subparagraph 9.6.B.5 Adjustments to Parking Requirements, above. For the purposes of this Section, the following definitions shall apply:

- 1. **Commercial Use:** Activity involving the sale of goods or services carried out for profit.
- 2. **Industrial Use:** Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

**Table 9-7 – Parking Requirements by Land Use**

| <i>Land Use</i>                                                                  | <i>Vehicle Spaces (Minimum #)<br/>GFA—Gross Floor Area</i>                                                                                                                                                                                                                                                              | <i>Bicycle Spaces<br/>Minimum #</i>                                    |

**D. Required Number of Loading Spaces**

Each land use shall provide the number of off-street loading spaces indicated in Table 9-8 – Loading Space Requirements by Land Use. Requirements for uses not specifically listed shall be determined by the Director of Community Development based upon the requirements for comparable uses and upon the particular characteristics of the proposed use. For other standards (e.g., size of loading spaces, location, turning radius, etc.), refer to Article XI (Off-Street Parking and Loading Standards), Division 4 (Loading Area Regulations), in Municipal Code Chapter 30 (Zoning and Development Code)

| Retail Sales, General and Factory/Warehouse Outlet Store                     | Up to 10,000 sq ft: 1 space                                                                                                                                                             | Truck           |
|                                                                              | 10,001 - 30,000 sq ft: 1 space<br>30,001 - 90,000 sq ft: 2 spaces<br>Over 90,000 sq ft: 2 spaces; and 1 additional space for each additional 50,000 sq ft over the initial 90,000 sq ft | Tractor Trailer |
| Service Uses                                                                 |                                                                                                                                                                                         |                 |
| All uses listed under “Service Uses” in Table 9-2; except for the following: | Up to 10,000 sq ft: 1 space                                                                                                                                                             | Truck           |
|                                                                              | 10,001 - 30,000 sq ft: 1 space<br>30,001 - 90,000 sq ft: 2 spaces<br>Over 90,000 sq ft: 2 spaces; and 1 additional space for each additional 50,000 sq ft over the initial 90,000 sq ft | Tractor Trailer |

**Table 9-8 – Loading Space Requirements by Land Use (continued)**

| <b>Land Use</b>                                       | <b>Loading Spaces (Minimum #)</b>                                                         | <b>Type (1)</b> |
|-------------------------------------------------------|-------------------------------------------------------------------------------------------|-----------------|
| Industrial Repair                                     | 5,000 - 30,000 sq ft: 1 space; and<br>1 additional space for each additional 30,000 sq ft | Truck           |
| Motor Vehicle                                         |                                                                                           |                 |
| • Service Stations                                    | 1 space                                                                                   | Tractor Trailer |
| <b>Distribution, Wholesaling and Warehousing Uses</b> |                                                                                           |                 |
| Warehousing Facilities                                | 5,000 - 30,000 sq ft: 1 space; and<br>1 additional space for each additional 30,000 sq ft | Tractor Trailer |

**Notes:**

- (1) A van loading space shall be a minimum of 12 ft wide by 19 ft long with a minimum 10 ft overhead clearance.  
A truck loading space shall be a minimum of 12 ft wide by 45 ft long with a minimum 14 ft overhead clearance.  
A tractor trailer loading space shall be a minimum of 12 ft wide by 70 ft long with a minimum 14 ft overhead clearance.

**E. Landscaping Standards for Parking Areas**

Within any parking area, one tree shall be planted for every five single-row parking stalls or 10 double-row parking stalls. Eighty percent of these shall be 15 gallons in size and the remaining 20 percent shall be 24-inch box or larger in size. If for some reason the contractor is unable to distribute trees in the interior of the parking area in compliance with these standards, the Director of Community Development may approve the placement of no more than 40 percent of the trees within the perimeter of the parking area. Planters shall not have a dimension less than four feet, excluding the thickness of the curbing. These requirements may be reduced for industrial parking areas that are screened from public view.

1. Parking areas shall contain a minimum landscape area equivalent to 30 percent of the total required 15 percent landscaping for the total site area.
2. Parking area perimeter landscaping.
  - a. Parking areas for nonresidential uses abutting or adjacent to residentially zoned property shall provide a landscape strip that is a minimum of 10 feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line bordering the residentially zoned property. Parking areas shall be screened from the residentially zoned property by a solid decorative masonry wall that is a minimum of six feet in height.
  - b. Parking areas for nonresidential uses abutting or adjacent to non-residentially zoned property or a street shall install a landscape strip that is a minimum of five feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line or the parking area and the street right-of-way. This requirement may be reduced or modified if a joint access agreement exists that is satisfactory to the Director of Community Development. Parking areas shall be screened from streets through combinations of plant materials, earth berms, raised planters, grade separations, or low walls. Slopes shall not exceed three to one or exceed 36 inches in height measured from the parking lot surface.
  - c. Plant materials, walls, or structures within a traffic sight area shall not block sight lines from driveways to streets and shall not exceed 36 inches in height.

- d. The minimum width of a landscape finger shall be five (5) feet.
  - e. End of aisle spaces adjacent to landscape finger shall be two feet wider for step out area.
3. Parking area interior landscaping.
- a. Tree number and location. One tree shall be provided for each four parking spaces and shall be evenly spaced throughout the interior parking area at a rate of one tree for every eight parking spaces. See Exhibit 7-4 – Parking Lot Landscaping. The required number of trees in the interior area shall not include trees required around the parking area perimeter. Trees are not required for tractor-trailer parking. A minimum of one cluster of trees shall be provided for each 100 feet of a row or double row of parking spaces. Trees shall be located in planters that are bounded on at least two sides by parking area paving. Planters shall have a minimum exterior dimension of five feet.

Exhibit 9-4 – Parking Lot Landscaping

- b. Tree size. All trees within the parking area shall be a minimum 24-inch box container at time of planting.
- c. Landscape protection. Landscaping shall be protected by concrete curbs of at least six inches in height. An end-of-aisle planter shall be provided at the ends of all parking aisles. Finger aisle planters shall be a minimum of nine feet wide and end-of-aisle planters shall be a minimum of seven feet wide, as measured from the inside of the curb. The parking space side of finger and end-of-aisle planters shall have a 24-inch wide concrete surface measured from the face of the curb. Planters shall be landscaped with a mixture of trees, shrubs, and ground cover. Planting areas shall have round corners instead of 90 degree corners and shall be shaped to allow vehicle movements. The Director of Community Development may approve alternative barriers designed to protect landscaped areas from vehicle damage. Wheel stops may be placed to allow for two feet of vehicle overhang area within the dimension of the parking space. To increase the parking lot landscaped area, a maximum of two feet of the parking stall depth may be landscaped with low-growth, hardy materials in-lieu of paving, allowing a bumper overhang while maintaining the required parking dimensions. However, the overhang area shall not be counted as part of the minimum landscape area required by paragraph (1)

above, and when adjacent to a required landscaping strip shall be in addition to the minimum required width. Fixtures (e.g., lights, sprinklers) that are higher than the curb are prohibited within a bumper overhang area. Curbing that creates a bumper overhang barrier shall not exceed a height of five inches.

- d. Parking areas with more than 100 spaces shall provide an appropriate entry feature consisting of a concentration of landscape elements, including trees, flowering plants, enhanced paving, and project identification.
4. Parking structures. A landscaping strip 10 feet wide shall be provided on all sides of a parking structure. One tree shall be provided for each 20 to 40 feet of perimeter of the structure, based on species selected. These trees shall be distributed evenly throughout the subject landscape area.

## 9.7 Sign Standards

### A. Applicability

This section contains standards and guidelines for signage to ensure that signs are consistent with the overall quality and character of anticipated new development. Regulations identify permitted sign types; provide standards for number of signs, size, and location; and provide design guidelines for color, materials, and illumination. Please refer to the Fontana Municipal Code for all sign-related information or regulations not specifically addressed in this section.

### B. Standards and Guidelines

1. Standards. The following standards shall apply to all signs, regardless of type:
  - a. Sign types not listed in this Section are not permitted.
  - b. Linear Frontage Ratio. For each establishment, one and one-half (1 ½) square feet of total sign area shall be allowed for each linear foot of building frontage ("Linear Frontage Ratio"). Unless otherwise noted, all signs (including temporary signs) shall count toward the total sign area permitted based on the Linear Frontage Ratio. For multi-tenant buildings, each establishment shall be calculated individually. For corner establishments, each facade shall be calculated individually. Permitted sign area based on the linear frontage of one establishment or facade shall not be placed on another establishment or facade.
  - c. Signs shall not be animated.
  - d. Commercial messages that identify, advertise, or attract attention to a business, product, service, or event or activity sold, existing, or offered elsewhere than upon the same property where the sign is displayed are expressly prohibited.
  - e. In the event of a conflict between this Section and any other City regulation, the provisions of this Section shall apply.
  - f. All issues not specifically addressed herein (e.g., signage in the public right-of-way, exempt signs, permit processing, etc.) shall be addressed pursuant to the Fontana Municipal Code.
2. Guidelines. The following guidelines shall apply to all signs, regardless of type.
  - a. Design Compatibility
    - Provide signage that is compatible with the building architecture and coordinate sign materials and colors with the building facade/storefront design.
    - Place signs in accordance with facade rhythm, scale, and proportion.
    - Ensure that signs associated with multi-tenant buildings are complementary to one another. A consistent location for tenant identification signs is recommended.

b. Location

- Signs shall be placed at or near the public entrance to a building or main parking area to indicate the most direct access to the business.
- Signs shall not be located so that they cover or interrupt the architectural details or ornamentation of a building's facade.
- Signs shall not project above the edge of the rooflines and shall not obstruct windows and/or doorways.

c. Sign Legibility

- Avoid hard-to-read, intricate typefaces. Typefaces that are difficult to read reduce the sign's ability to communicate.
- Avoid spacing letters and words too close together. Lettering shall not occupy more than 75 percent of the sign face.
- Limit the number of lettering styles in order to increase legibility. Signs shall be limited to no more than two styles for small signs (generally up to 10 square feet) and three styles for larger signs.
- Use significant contrast through incorporating light colored letters and a darker, contrasting background to provide the most visible and best-looking image.
- Incorporate business identity symbols and logos.
- Logo means any symbol or any combination thereof adopted and used by an individual or corporation to identify goods made or sold or services rendered by an individual or corporation and to distinguish them from goods made or sold or services rendered by others and that is nationally or State of California registered.

d. Color and Materials

- Bright day-glo (fluorescent) colors shall be avoided as they are distracting and do not blend well with other background colors.
- Sign colors shall relate to and complement the materials or color scheme of the buildings, including accent and trim colors.
- Sign materials shall be selected with consideration for the architectural design of the building's façade and also contribute to the legibility of the sign.
- Construct signs of durable, high-quality materials.
- Wood, paper, and cloth signs, and painted wall signs are prohibited.

e. Illumination

- Individually illuminated letters, either internally illuminated or back-lighted solid letters (reverse channel), are a preferred alternative to internally illuminated plastic-faced cabinet signs.
- Signs shall be comprised of individual letters.
- The use of backlit, individually cut letter signs is strongly encouraged for all types of business and signs, including monument-type signs.
- Whenever indirect lighting fixtures are used, care shall be taken to properly shield the light source.

f. Electrical Raceways and Conduits

- Electrical transformer boxes and raceways shall be concealed from public view.
- All exposed conduit and junction boxes shall be appropriately concealed from public view.

C. **Sign Types**

For the purposes of this plan, Table 9-9 – Sign Types indicates the signs that are allowed in the Slover Central Manufacturing District.

| Table 9-9 – Sign Types |                                                                                                              |
|------------------------|--------------------------------------------------------------------------------------------------------------|
| 1                      | <b>Grand Wall Sign</b><br>Non-residential uses with unfenestrated wall areas of 2,000 square feet or greater |
| 2                      | <b>Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                              |
| 3                      | <b>Projecting Sign</b><br>Non-residential uses with a dedicated ground floor entrance                        |
| 5                      | <b>Awning Valance Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 6                      | <b>Awning Side Sign</b><br>Non-residential uses with a dedicated ground floor entrance                       |
| 7                      | <b>Canopy Fascia Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 8                      | <b>Under-Awning or Under-Canopy Sign</b><br>Non-residential uses with a dedicated ground floor entrance      |
| 9                      | <b>Recessed Entry Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 10                     | <b>Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                            |
| 11                     | <b>Temporary Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                  |
| 12                     | <b>Temporary Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 13                     | <b>Monument Sign</b><br>Any building with continuous linear street frontage of 200 feet or greater           |
| 14                     | <b>Directional Sign</b><br>Each vehicle entrance                                                             |
| 15                     | <b>Accessory Sign</b><br>Identified specific uses                                                            |

## **D. Sign Type Standards and Guidelines**

This section provides Standards and Guidelines for each Sign Type.

### **1. Grand Wall Sign**

Grand Wall Signs are large signs located on, and parallel to, large unfenestrated building wall areas.

#### **a. Standards**

- i. A Grand Wall Sign shall only be located on unfenestrated wall areas of 2,000 square feet in size or greater.
- ii. Only one (1) Grand Wall Sign shall be permitted per establishment.
- iii. The Grand Wall Sign area shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. A Grand Wall Sign shall not exceed 1,000 square feet or 25 percent of the total wall area, whichever is less.
- v. Grand Wall Signs shall project no more than one (1) foot from the façade of the building.

1) Grand Wall Sign.

#### **b. Commercial Guidelines**

- i. Materials used in Grand Wall Signs shall be wood, ceramic, metal, or paint only.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

#### **c. Industrial Guidelines**

- i. Materials used in Grand Wall Signs shall be ceramic or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

### **2. Wall Sign**

Wall Signs are signs that are located on, and parallel to, a building wall. Business Identification Wall Signs are signs that announce the name of a business within a building and Building Identification Wall Signs are signs that announce the name of a building. Both are located on, and parallel to, a building wall.

a. Standards

- i. Wall Signs shall be located below the second floor and within the middle 50 percent of the building or tenant frontage measured from lease line to lease line. Building Identification Wall Signs shall be located only on the frieze, cornice, or fascia area of storefront level; frieze, cornice, fascia, parapet of the uppermost floor; or above the entrance to main building lobby.
- ii. No Wall Sign shall exceed 150 square feet in size. Building Identification Wall Signs shall be no taller than 24 inches in height.
- iii. Wall Signs shall count towards the total sign area permitted based on the Linear Frontage Ratio, except that the area of Building Identification Wall Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. Wall Signs shall project no more than one (1) foot from the façade of the building.

2) Building Identification Wall Sign.

2) Business Identification Wall Sign.

b. Commercial Guidelines

- i. Materials used in wall signs shall be wood, ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. New wall signs for individual businesses in a shopping center shall be placed consistent with the location of signs for other businesses in the center. This will establish visual continuity among storefronts and create a unified appearance for the center.
- v. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

c. Industrial Guidelines

- i. Materials used in wall signs should be ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs should be inscribed into the façade or constructed of individual metal letters.
- ii. Wall signs shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only. Building Identification Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

**3. Projecting Sign**

Projecting Signs are signs that are oriented perpendicularly to the building façade and are either (1) suspended under a bracket, armature, or other mounting device or (2) are cantilevered (i.e., structurally affixed to the building).

a. Standards

- i. Projecting Signs shall only be mounted on the wall area below the second floor.
- ii. No Projecting Sign shall exceed 16 square feet in size.
- iii. Projecting Signs shall project no more than four feet from the façade of the building.
- iv. No portion of a Projecting Sign shall be lower than eight feet above the level of the walkway over which it projects.

b. Commercial and Industrial Guidelines

- i. Projecting Signs that are suspended under a bracket, armature, or other mounting device shall be metal only and shall be illuminated by external illumination only.
- ii. Projecting Signs that are cantilevered signs shall be metal and paint materials only and shall be illuminated by external illumination or halo illumination only.

3) Cantilevered Projecting Sign.

3) Suspended Projecting Sign.

- iii. Sign supports and brackets shall be compatible with the design and scale of the sign and the architectural design of the building.

#### **4. Awning Valance Sign**

Awning Valance Signs are signs applied to the awning valance and are contained completely within the valance.

- a. Standards
  - i. Lettering for Awning Valance Signs shall include one (1) line of lettering not to exceed two-thirds (2/3) the height of the valance or 12 inches, whichever is less.
  - ii. Awning Valance Signs shall project no farther from the building than its associated awning.
  - iii. No portion of an Awning Valance Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial and Industrial Guidelines
  - i. Awning Valance Signs shall consist of metal, or vinyl or paint applied directly to the awning.
  - ii. Awning Valance Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

4) Awning Valance Sign.

## 5. *Awning Side Sign*

Awning Side Signs are signs applied to the side panel of an awning.

- a. Standards
  - i. The area of Awning Side Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - ii. Lettering for Awning Side Signs shall not exceed 12 inches in height with total sign area not to exceed 20 percent of the area of the awning side area.
  - iii. Awning Side Signs shall project no farther from the building than its associated awning.
  - iv. No portion of an Awning Side Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial and Industrial Guidelines
  - i. Awning Side Signs shall consist of vinyl or paint applied directly to the awning.
  - ii. Awning Side Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

5) Awning Side Sign.

## 6. *Canopy Fascia Sign*

Canopy Fascia Signs are signs that are mounted to the front or side fascia of a canopy and contained completely within that fascia.

- a. Standards
  - i. The height of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) the height of the fascia or 12 inches, whichever is less.
  - ii. The width of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) of the canopy width.
  - iii. Canopy Fascia Signs shall project no farther from the building than its associated canopy.
  - iv. No portion of a Canopy Fascia Sign shall be less than eight feet above the level of the walkway over which it projects.
  - v. Canopy Fascia Signs shall consist of only one (1) line of lettering articulated as individual letters mounted directly to the canopy.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Canopy Fascia Signs shall be metal and paint only.
  - ii. Canopy Fascia Signs shall be illuminated by external illumination only.

6) Canopy Fascia Sign.

## 7. *Under-Awning or Under-Canopy Sign*

Under-Awning or Under-Canopy Signs are signs that are suspended under an awning or canopy, perpendicular to the building facade.

- a. Standards
  - i. Under-Awning or Under-Canopy Signs shall be located adjacent to a public entrance.
  - ii. No more than one (1) Under-Awning or Under-Canopy Sign shall be permitted per establishment per façade.
  - iii. The area of Under-Awning or Under-Canopy Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - iv. Under-Awning or Under-Canopy Signs shall not exceed three (3) square feet in area.

7) Under-Awning Sign.

7) Under-Canopy Sign.

- v. Under-Awning or Under-Canopy Signs shall project no farther from the building than its associated awning or canopy.
- vi. No portion of an Under-Awning or Under-Canopy Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial Guidelines
  - i. Materials used in Under-Awning or Under-Canopy Signs shall be wood, metal, and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
  - i. Materials used in Under-Awning or Under-Canopy Signs shall be metal and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.

## 8. ***Recessed Entry Sign***

Recessed Entry Signs are signs that are oriented parallel to the building façade and that are suspended over a recessed entry.

8) Recessed Entry Sign- Section View.

- a. Standards
  - i. No Recessed Entry Sign shall exceed twenty (20) square feet in size.
  - ii. Recessed Entry Signs shall not project beyond the façade of the building.
  - iii. No portion of a Recessed Entry Sign shall be lower than eight feet above the level of the walkway.
- b. Commercial Guidelines
  - i. Materials used in Recessed Entry Signs shall be wood, metal, and paint only.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.

8) Recessed Entry Sign- Elevation View.

c. Industrial Guidelines

- i. Materials used in Recessed Entry Signs shall be metal and paint only.
- ii. Recessed Entry Signs shall be illuminated by external illumination only.

**9. Window Sign**

Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window.

a. Standards

- i. Window Signs shall be permitted on windows below the second floor level only. A Window Sign that only identifies a building shall be located on a transom window above a primary entrance, or the glazed area of primary door.
- ii. Window signs shall count towards total sign area permitted based on the Linear Frontage Ratio, except that the area of a Window Sign that only identifies a building shall not count towards the total sign area permitted based on the Linear Frontage Ratio. One (1) Window Sign that only identifies a building shall be permitted per building per street-facing façade.
- iii. No more than 25 percent of any individual window area shall be covered or otherwise occupied by signage.
- iv. The letter height of each Window Sign shall not exceed 12 inches and shall be taller than four inches.

b. Commercial and Industrial Guidelines

- i. Ground-floor Window Signs shall consist of vinyl or paint applied to the glass, neon mounted or suspended behind the glass, or framed and mounted paper signs. Window Signs that only identify a building shall consist of vinyl or paint applied to the glass only.
- ii. Ground floor Window Signs shall not be illuminated.

g) Window Sign.

g) Building Identification Window Sign.

## 10. Temporary Window Sign

Temporary Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window and are designed, constructed, and intended for display on private property for a period of not more than 90 consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal signage.

- a. Standards
  - i. Temporary Window Signs shall be located only on ground floor windows on building facades that face a public street or a parking lot.
  - ii. Temporary Window Signs shall not exceed six square feet in size.
  - iii. Temporary Window Signs shall not cause the total amount of the window area covered with signage to exceed 25 percent.
  - iv. Temporary Window Signs that satisfy the above standards and General Standards do not require a permit.

10) Temporary Window Sign.

- b. Commercial and Industrial Guidelines
  - i. Temporary Window Signs shall be constructed of paint applied directly to the glass or framed paper signs placed behind the glass.
  - ii. Temporary Window Signs shall not be illuminated.
  - iii. Temporary Window Signs that satisfy the above guidelines and General Guidelines do not require a permit.

## 11. Temporary Wall Sign

Temporary Wall Signs are signs that are located on, and parallel to, a building wall and are designed, constructed, and intended for display on private property for a period of not more than ninety (90) consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal temporary banner signage.

- a. Standards
  - i. Temporary Wall Signs shall only be mounted on a wall area below the second floor level that faces a public street or a parking lot.
  - ii. A maximum of one (1) Temporary Wall Sign is allowed per establishment.

11) Temporary Wall Sign.

- iii. No Temporary Wall Signs shall exceed 32 square feet in area.
  - iv. Temporary Wall Signs shall project no more than one (1) foot from the façade of the building.
- b. Commercial and Industrial Guidelines
- i. Materials used in Temporary Wall Signs shall consist of a flexible vinyl material with grommet holes installed around the edges to accommodate attachment to a building.
  - ii. Temporary Wall Signs shall not be illuminated.

## **12. Monument Sign**

A Monument Sign is a freestanding sign supported by a solid architectural element at its base.

- a. Standards
- i. A maximum of one Monument Sign is allowed per street frontage for single-purpose buildings, multi-tenant buildings or complexes and shopping centers on a -parcel with one or more street frontages of at least 100 feet.
  - ii. A Monument Sign shall not exceed eight feet in length or six feet in height.
  - iii. Monument Signs shall be placed perpendicular or parallel to the street. The base of a Monument Sign shall be set back a minimum of five feet from any public right-of-way or interior property line; a minimum of 10 feet from the edge of a driveway; and a minimum of 50 feet and from any Monument Signs or Pylon Signs on adjoining sites. Monument Signs shall not block sight lines at entry driveways and circulation aisles.
  - iv. The sign copy for a Monument Sign shall only identify the name of the center, complex, or building and the address; however, the name of the primary tenant, if any, may be included in the copy. The minimum letter size allowed shall be six inches. Sign copy shall not be located closer than one half-letter height to the sign edge or other line of copy. Between 5 to 10 percent of the sign area should be dedicated to identification of the street address.
  - v. The area of Monument Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - vi. Monument Signs shall not project over any on-site driveway or vehicle circulation area.

12) Monument Sign.

- vii. Landscaping with automatic irrigation shall be provided at the base of the supporting structure equal to twice the area of one face of the sign or 75 square feet, whichever is greater. For example, 40 sq. ft. of sign area = 80 sq. ft. of landscaped area.
- b. Commercial and Industrial Guidelines
  - i. Monument Signs may be illuminated, however the sign copy should be the only portion of the sign face that is illuminated. The sign background or field shall be opaque with a nonglossy, nonreflective finish.
  - ii. The sign area and height of the sign shall be in proportion to the site and surrounding buildings. Signs shall not be overly large so as to be a dominant feature of the site.
  - iii. Monument Signs shall incorporate architectural elements, details, and articulation as follows:
    - Provide a solid architectural base that supports the sign. The base shall be a minimum of one-foot in height.
    - Provide architectural elements on the sides and top to frame the sign pane(s). Use columns, pilasters, cornices, and similar details to provide design interest.
    - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
    - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with its adjacent building(s).

### 13. Directional Sign

A Directional Sign is an on-premise sign giving directions, instructions, or facility information of an establishment (e.g., parking signs, exit and entrance signs, etc.).

13) Directional Sign.

- a. Standards
  - i. One (1) directional sign for each vehicle entry to a site with a maximum area of three square feet per sign. Maximum sign height shall be four feet. Additional directional signs may be allowed with approval of a Comprehensive Sign Program.
- b. Commercial and Industrial Guidelines
  - i. Directional signs and their supports shall use the same color palette of the proposed building.
  - ii. Directional signs shall be located to maintain sight lines along major circulation routes and shall be illuminated for visual clarity and safety.
  - iii. Directional signs shall be designed with easy-to-read fonts, contrasting colors from the surrounding support panels, and durable materials.
  - iv. Double-sided parking directional signs shall incorporate messaging and direction arrows on both sides of sign.
  - v. Parking directional signage shall be used consistently throughout each individual development.

### 14. Accessory Signs

Accessory Signs are signs that provide incidental information about a project site or a business and its goods or services. For the purposes of this plan, Accessory Signs include:

- Directory Sign. A sign listing the tenants or occupants of a building or building complex.
- Nameplate Sign. A sign indicating the name and/or address of a building or occupant.
- Restaurant Menu Sign. Menus displayed on the exterior premises of a restaurant.

14) Accessory Sign.

- a. Standards
  - i. The area of Accessory Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - ii. Directory Signs: Limited to a total sign area of 10 square feet.
  - iii. Nameplate Sign: One non-illuminated sign not to exceed one square foot in area.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Accessory Signs shall be wood and metal.
  - ii. Accessory Signs shall be illuminated by internal or external illumination as appropriate.

## **9.8 Public Right-of-Way Streetscape**

This section establishes standards for streetscape landscaping improvements within the public rights-of-way along the major highways, primary highways, and secondary highways as identified in the General Plan, Circulation Master Plan, as well as district gateway/intersection enhancements. The intent of these streetscape improvement concepts and gateway enhancements is to provide a “sense of place” or identity, while interweaving the standards and tree palettes that may be provided by any overriding City Master Street Tree Plan.

### **A. Street Classifications**

Streets within the SCD are classified as follows:

1. Major highways:
  - a. Six-lane major highway – Cherry Avenue.
  - b. Modified six-lane residential adjacent major highway – none within SCD.
  - c. Modified six-lane no median major highways – none within SCD.
  - d. Eight-lane major highways – none within SCD.
2. Primary highways – Beech Avenue and Slover Avenue.
3. Secondary highways – Santa Ana Avenue.
4. Collector streets – Hemlock Avenue, Live Oak Avenue, and Redwood Avenue.

### **B. General Design Guidelines**

The following general design criteria are intended to articulate consistent landscape treatments on similar classifications of corridors and provide a hierarchy of conceptual treatments for district gateway/intersection enhancements.

1. Landscaping should be used to accentuate and frame important view corridors.
2. Landscaping shall employ a common three-tiered approach to design:
  - a. Trees
  - b. Shrubs, vines and tall grass-like materials
  - c. Groundcovers (does not include turf)
3. Landscaping should be consistent and accentuated along arterial corridors and gateway intersections to emphasize district areas.
4. Street trees on major highways and primary highways shall consist of on-center planting of deciduous trees in medians (whenever medians are required) and evergreen trees in

parkways to provide seasonal variations of views during fall and winter months (clearer air and snow-capped peaks).

5. Secondary highways shall provide single species of evergreen trees planted in parkways.
6. Gateway intersection enhancements should incorporate the adjacent property tree species (used in buffer setback) in order to provide background and screening, and be enhanced with accent trees selected for their character and shape.
7. Primary and secondary gateways will include thematic monumentation for district identification and reflect elements of local identity (i.e. river rock, concrete, City logo, etc.).
8. All gateway intersection enhancement shall incorporate decorative paving at corner areas and plant materials that promote the best of water-efficient landscaping.

### **C. Streetscape Concept**

The Streetscape Concept Plan for the entire Specific Plan area is shown on Exhibit 9-5. The plan identifies major, primary, and secondary highways, as well as collector streets and the gateway intersections within the Specific Plan area. Roadway classifications are consistent with the General Plan, Circulation Master Plan.

#### **1. Major Highway Streetscape**

Major highway streetscapes define the image of the City and its districts, while providing arterial linkages within and beyond the City. There are four streetscape concepts for major highways: Six-Lane Major Highway, Modified Six Lane No Median Major Highway, Modified Six Lane Residential Adjacent Major Highway, and Eight-Lane Major Highway. These major highway streetscapes are designed in response to special design needs, right-of-way, and adjacencies. The only major highway within the SCD is Cherry Avenue. Streetscape cross-sections are shown in Exhibit 9-6, 9-7, and 9-8.

#### **2. Primary/Secondary Streetscape**

Primary/Secondary highway streetscapes define the areas within the Specific Plan and its districts, and connect to the major thoroughfares throughout the City. The only primary highway within the SCD is Slover Avenue. The only secondary highway in the SCD is Santa Ana Avenue. Streetscape cross-sections for these areas are shown in Exhibit 9-9.

# Southwest Industrial Park Specific Plan

Slover Central Manufacturing District

Exhibit 9-5 – Streetscape Concept Plan

Exhibit 9.6 – Major Highway – 6 Lanes – Cross Section C-C (Cherry Avenue)

Exhibit 9-7 – Primary Highway – 4 Lanes – Cross Section D-D  
(Beech Avenue and Slover Avenue)

Cross Section E-E  
Secondary Highway - 4 Lanes (Santa Ana Avenue)  
\*Santa Ana Avenue will have bike lanes.

Exhibit g-8 – Secondary Highway – 4 Lanes – Cross Section E-E (Santa Ana Avenue)

3. Gateways

**A. Concept Plan**

The Streetscape Concept Plan – Exhibit 8-4 identifies a hierarchy of primary, secondary, and tertiary gateways. The intent of the gateway intersection enhancements is to provide a visual statement that you are within the Specific Plan area.

The gateway intersection enhancements should all incorporate uniform treatments (to varying degrees) within expanded corner setback areas (45 degree diagonal right-of-way). Depending on the hierarchy level, each gateway shall include special corner/sidewalk paving, planting schemes that highlight drought tolerant species, and monumentation signage. Monument signs are optional on tertiary gateway intersections.

Each corner planting scheme shall incorporate the three-tiered planting concept, consisting of accent trees, shrubs, or tall grass-like plant material, and a ground cover. Dense planting of evergreen tree species consistent with adjacent buffer setback plantings shall provide a background/screen for each corner setback area.

Gateway conceptual designs with typical dimensions (plan views) are illustrated in Exhibits 8-8, 8-9, and 8-10. The monument sign concept as it would appear in front of the planting treatment is illustrated in Exhibit 8-11.

Gateway enhancements and monument sign enhancements shall meet the City's line of sight regulations, as determined by the City Engineer. Dimensions of monument signs shall comply with Section 7.7.D.13 Monument Sign.

**B. Dedication and Maintenance of Gateway Intersection Improvements**

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for district gateway improvements in Section 8.8 Public Right-of-Way Streetscape, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standards indicated in Section 8.8 Public Right-of-Way Streetscape; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.

- c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure the installation and perpetual maintenance of the Gateway Intersection Enhancements.

## Southwest Industrial Park Specific Plan

Slover Central Manufacturing District

Exhibit 9-9 – Primary Gateway Intersection Enhancement Concept

Exhibit 9-10 – Secondary Gateway Intersection Enhancement Concept

Exhibit 9-11 – Monument Sign Concept

#### 4. **Street Furniture**

Exhibit 9-12 – Street Furniture Palette, identifies recommended street furniture components, including lighting, trash receptacles, and benches, for the district. The palette is intended to ensure a unified visual identity for the district, which is distinct from the other districts within the Specific Plan area.

**Wall/building lighting

DMS 55 - SG**

**Pole/pedestrian and parking lot lighting**

**Chase Park Series trash receptacle and bench  
by Landscape Forms**

Exhibit 9-12 – Street Furniture Palette

## **9.9 Design Guidelines**

### **A. Design Objectives**

The Design Guidelines will promote and reinforce the City's commitment to high quality development. In general, the guidelines are intended to ensure that development preserves or improves the positive characteristics of the City's image. The objectives of these guidelines are to:

- Promote orderly development by implementing the SWIP Specific Plan objectives, policies, and principles found in Section 2.o.
- Protect and enhance property values by ensuring that development fits properly within the context of its surroundings and does not negatively impact adjacent uses.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian and motor vehicle circulation within a project and convenient pedestrian linkages to and from adjacent residential, commercial, industrial, and school areas.

### **B. Design Intent**

The design intent of the SCD is to provide for innovative and high quality design that accommodates and supports light and heavy manufacturing uses. Site design and architecture that meets the functional needs of the uses while allowing for buffering from adjacent uses and aesthetically-pleasing environments is highly encouraged.

### **C. Industrial, Distribution, and Business Park Uses**

The design guidelines in this Subsection shall apply to all industrial, distribution, and business park development within this land use district.

## 1. Site Design

### Site Layout

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street.
  - Parking in front of building with a landscape buffer between parking and street. **See Figure 1.**

Figure 1. Appropriate building and landscape placement adjacent to public street

- Visitor parking may be located at the front of the building adjacent to the main entry while employee parking and service areas are located at the sides and rear of the building. **See Figure 2.**

Figure 2. Parking layout.

- Service and loading should not be located on building side(s) adjacent to a public street.
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal is prohibited.
- Noise generating activities and storage areas shall be located as far as possible from adjacent properties. Sound attenuation walls shall be used where appropriate to reduce noise.
- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. **See Figure 3.**

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.). **See Figure 4.**
- Business park development should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

### 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public

Figure 3. Appropriate location of loading areas.

Figure 4. Open space amenities.

interest along adjacent major streets. **See Figure 5.**

- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest. **See Figure 6.**
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between sensitive uses and outdoor work areas, loading and storage.

### 3. Site Elements

#### Fences and Walls

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way. **See Figure 7.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall. **See Figure 8.**
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti. **See Figure 8.**

Figure 5. Buildings are oriented to create gateway into development.

Figure 6. Buildings are oriented to provide architectural features visible from public rights-of-way.

Figure 7. Tubular steel and stone pillars are appropriate fencing materials.

Figure 8. Wall is articulated with pillars and incorporates landscaping at the base and vines to deter graffiti

## Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 9.**
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. **See Figure 10.**

Figure 9. Appropriate placement, orientation and screening of service areas.

## Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 11.**
- Trash enclosures shall integrate horizontal screening such as trellises. **See Figure 11.**

Figure 10. Screening of roof mounted equipment.

## Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major

Figure 11. Trash enclosure.

streets, and to prevent light spillover onto adjacent properties. **See Figure 12.**

- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 13.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building. **See Figure 14.**
- Truck and truck trailer storage areas shall incorporate lighting to increase real and perceived security.

#### 4. Parking and Access

##### Parking

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts. **See Figure 15.**
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 15.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside the building so as not to be visible from adjacent streets.

Figure 12. Hooded light fixture directs light downward.

Figure 14. Decorative light fixtures.

Figure 15. Parking lot landscaping.

- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 16.**
- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality storm water facilities consistent with City standards. **See Figure 17.**

Figure 16. Pedestrian circulation is consistent along perimeter of parking lot

### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts. **See Figure 18.**

Figure 18. Shared parking access.

- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 19.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

Enhance project entries with landscaping and special paving for visual impact.

Figure 19. Entry drive.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses.
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 20.**

Figure 20. Incorporation of vertical offsets and material changes.

### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest. **See Figure 21.**
- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 22.**
- Higher facades and rooftops should be incorporated at corners and intersections,

Use of windows, fins and wall plane breaks provides visual interest.

Figure 21. Façade articulation.

Figure 22. Use of cornices, window trim and grooves.

and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage.

**See Figure 23.**

- Primary building entries shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a building's entry. **See Figure 24.**

Figure 23. Enhanced corner elements.

Figure 24. Articulated Entries.

- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 25.**
- Locate and/or screen rooftop equipment so that it is not visible from the street. Rooftop screening shall be integral to the building's form.

Figure 25. Offset roof planes.

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.

- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color. **See Figure 26.**
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.
- Use of metal as the primary building façade material is subject to approval of a conditional use permit by the Planning Commission.

Figure 26. Use of expansion joints.

## 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) ground cover and flowering plants;
  - 2) shrubs and vines; and
  - 3) trees.

**See Figure 27.** See Recommended Plant Palette in Section 9.5.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. Incorporation of public art is highly encouraged.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection .

Figure 27. Three-tiered planting system: trees, shrubs, and ground covers.

- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls. Water features and public art are also encouraged. **See Figure 28.**
- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 29.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction. **See Figure 30.**

Figure 28. Plaza area.

Figure 29. Wall incorporates landscaping to soften appearance and deter graffiti.

Figure 30. Plant material along buffer wall.

- Landscaping and trellises with vines are encouraged be used for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to sensitive uses shall include dense landscaping to provide visual screening and noise abatement.

- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 31.**
- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area. **See Figure 32.**
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration features and bio-swales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 33.**
- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.

Wall, landscaping and berms screen industrial buildings and storage

Figure 31. Landscaped berms.

Figure 32. Landscaped parking lot.

Figure 33. On-site water filtration.

- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### **D. Commercial Uses**

#### **1. Site Design**

##### **Site Layout**

- The arrangement of multiple buildings and associated circulation and parking shall reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas that enhance publicly-accessible spaces. **See Figure 34.**
- Buildings may be located adjacent to the street with a fully landscaped setback or buildings may be set back with limited parking in front. **See Figure 35.**

##### **Courtyards, and Plazas**

- The organization and design of buildings shall encourage and facilitate pedestrian activity.
- Buildings should be organized to create usable open space, courtyards, plazas and dining areas. **See Figure 36.**

Figure 34. Site plan emphasizes pedestrian connectivity.

Figure 35. Limited parking adjacent to street with landscape setback.

Figure 36. Buildings create courtyard.

- Pedestrian-oriented open spaces, courtyards and plazas shall include a focal element such as a sculpture and/or water feature and sitting areas. **See Figure 37.**

## 2. Building Orientation

- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Commercial buildings on corner parcels shall establish a strong tie to both streets and should encourage pedestrian activity at corner locations. **See Figure 38.**
- Buildings associated with service retail and restaurant uses shall be pedestrian-scaled, with entries fronting onto streets, plazas or courtyards to reinforce pedestrian orientation.
- Buildings adjacent to sensitive uses shall be buffered. This may be accomplished by providing masonry walls, landscaped berms, appropriate building orientation, building height stepbacks and limitations on activities adjacent to sensitive uses. **See Figure 39.**

Figure 37. Open plaza areas with seating.

Figure 38. Commercial/retail buildings on corners should establish strong tie to the street.

Figure 39. Masonry wall and landscaping separates uses.

- Commercial and retail buildings should generally be placed at or near setback lines with developments oriented in a manner that will provide visual interest.
- Buildings should be oriented in a manner that takes advantage of passive solar design to the maximum extent feasible.

### 3. Site Elements

#### Fences and Walls

- Wall heights and surfaces shall be articulated with varying façade depths or pilasters to promote architectural interest, and may include a cap along the top of the wall. **See Figure 40.**
- Walls visible from public streets shall be decorative and complement the design of on-site buildings.
- Wall and fencing materials may consist of brick, stone, stucco, wrought iron or tubular steel. Wall and fencing colors should match building colors, with neutral earth tones. **See Figure 41.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

Figure 40. Wall incorporates pilasters and cap.

Figure 41. Stone wall.

## Screening

- Service and delivery areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 42.**
- Outdoor mechanical equipment should be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. **See Figure 43.**

Figure 42. Screened delivery area.

Figure 43. Screening of roof-mounted equipment.

## Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site.
- Trash enclosures visible from the public view shall integrate horizontal screening such as trellises.

## Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major

streets, and to prevent light spillover into adjacent properties. **See Figure 44.**

- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 45.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures. **See Figure 46.**
- Decorative light fixtures are encouraged, as long as fixtures are consistent with the architectural design of the building. **See Figure 47.**

#### **4. Parking and Access**

##### **Parking**

- Parking lots should be designed with a clear hierarchy of circulation: major access drives with no direct access to parking spaces; major circulation drives with little or no parking; and parking aisles for direct access to parking.
- Large commercial and retail parking areas should be located behind building facades so as not to be visible from major streets.
- Parking lots shall not be the dominant visual element on the site.

Figure 44. Hooded light fixture directs light downward.

Figure 45. Bollard lighting along pedestrian walkway.

Figure 46. Pole mounted light.

Figure 47. Decorative light fixtures.

- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 48.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat gain and the visual impacts of large parking areas.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 49.**
- Parking lot design shall include water quality storm water facilities consistent with City standards. **See Figure 50.**

#### Access - Vehicular

- Site access shall promote safety by providing an adequate stacking distance for vehicles between the back of the sidewalk and the first parking stall or circulation aisle.
- Conflict between vehicles and pedestrians shall be avoided at access driveways by providing a walkway on at least one side of the driveway.
- The number of access driveways shall be minimized and located as far as possible from street intersections.
- Site access locations shall be coordinated with existing or planned median openings and driveways on the opposite side of the roadway.
- Unobstructed line of sight at corners and driveways shall be provided to reduce vehicular conflicts. **See Figure 51.**
- Avoid placing primary vehicle access in close proximity to major building entrances

Figure 48. Landscaped parking lot.

Figure 49. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 50. On-site storm water capture.

Figure 51. Unobstructed sight lines.

in order to minimize pedestrian and vehicular conflicts. **See Figure 52.**

#### Access - Pedestrian

- Clearly defined pedestrian walkways or paths should be provided from parking areas to primary building entrances. Clear and convenient pedestrian access shall be provided between the public sidewalk and the pedestrian areas of the development. **See Figure 53.**
- Raised walkways, decorative paving, landscaping and/or bollards shall be used to separate pedestrian paths from vehicular circulation areas. **See Figure 54.**

Figure 52. Vehicle access is placed away from building entrances.

Figure 53. Clearly defined pedestrian walkways

Figure 54. Raised walkway and landscaping in parking lot.

- Parking areas should be designed so that pedestrians walk parallel to moving cars. **See Figure 55.**

### Loading and Delivery

- Loading and delivery service areas shall be located and designed to minimize their visibility, circulation conflicts, and adverse noise impacts to the maximum extent feasible.
- Loading and delivery service areas shall be screened with portions of the building, architectural wing walls, freestanding walls or landscape planting.
- Loading areas shall be designed to not interfere with circulation or parking, and to permit trucks to fully maneuver on the property without backing from or onto a public street. **See Figure 56.**
- Service, loading and delivery areas should take access from planned shared access points to reduce curb cuts along project frontages.

## 5. Architecture

### Mass and Scale

- The mass and scale of new infill developments shall be compatible with the existing, adjacent structures. This can be accomplished by transitioning from the height of adjacent buildings to the tallest elements of the new development by stepping back the upper portions of taller buildings.
- Human-scale elements, such as pedestrian-scaled doors, windows and building modules shall be used to emphasize pedestrian orientation.

Appropriate

Inappropriate

Figure 55. Pedestrian circulation.

Figure 56. Loading area placed behind building outside of circulation lanes.

- The size and location of various building elements (e.g., roofs, parapet walls, wing walls, etc.) shall be in scale to the building as a whole and provide visual interest. **See Figure 57.**

#### Building Facades

- Buildings shall include enhanced and articulated facades along public streets).
- Design details shall be continued or repeated upon all building elevations.
- Building entrances should be readily identifiable. The use of recesses, projections, columns, and other design elements to articulate entrances are encouraged. **See Figure 58.**
- Facades shall provide visual interest with vertical and horizontal variations in wall and roof planes, building projections, door and window bays, arcades, and similar elements/techniques. **See Figure 59.**
- Buildings shall undergo a break in façade approximately every 40 feet, to create a varied wall surface along public areas. Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale should be considered for the remainder of the building spanning public right-of-way frontage.
- Buildings should include vertical elements (e.g., clock tower, building articulation) that create points of visual interest when viewed from the public right-of-way.
- Roof designs that are visually interesting and designed to completely screen all rooftop equipment from public streets are required. **See Figure 60.**

Figure 57. Building elements add visual interest.

Figure 58. Building Entry.

Figure 59. Horizontal and vertical articulation.

Figure 60. Full roof screens all equipment and provides visual interest.

- Buildings should use large windows along walls and skylights in rooftop designs to capture natural light during operating hours.
- The interior areas of commercial development should have shaded or covered walkways.

### Storefronts

- Storefronts shall be comprised predominantly of transparent surfaces (ex. windows). **See Figure 61.**
- The use of clear glass on the first floor is strongly encouraged.
- Storefront windows shall be large and a minimum of 24 inches off the ground. The maximum bulkhead (wall plane between the ground and the bottom of the windows) height should be approximately 36 inches.
- Storefront entries should promote a sense of entry into the structure as well as provide a sense of shelter by incorporating elements such as overhangs, canopies, awnings, and recesses. **See Figure 62.**
- If security grilles are necessary, they shall be placed inside the building behind the window display area at a minimum distance of two feet behind the window.
- Product storage racks shall not block views through storefront windows.

Figure 61. Storefront windows.

Figure 62. Storefront overhangs provide a sense of shelter and entry.

### Colors and Materials

- The use of a coordinated three-color palette for the base color and major and minor trim accents is encouraged.
- Colors for all structures on-site should be varied and should consist of neutral, earth tones. **See Figure 63.**

Figure 63. Use of neutral, earth tones.

- Exterior finish materials shall be appropriate for the architectural style and/or theme of the entire development and should contribute towards a high quality image. **See Figure 64.**
- Changes in materials shall occur at inside corners to make building volumes appear substantial.
- Materials shall be varied to provide architectural interest, however, the number of materials shall be limited and not exceed what is required for contrast and accent of architectural features.
- Exterior materials and architectural details shall relate to each other in ways that are traditional and logical. For example, heavy materials should appear to support lighter ones. **See Figure 65.**

## 6. Landscaping

### Plants and Irrigation

- Landscaping should help complete the design of the site and enhance the quality of commercial developments by framing and softening the appearance of buildings, screening undesirable views, and buffering incompatible uses.
- Landscaped areas should generally incorporate planting utilizing a three tiered system:
  - 1) ground covers (including flowering plants—annuals and perennials),
  - 2) shrubs and vines, and
  - 3) trees.

**See Figure 66.**

Figure 64. Exterior finish materials.

Figure 65. Heavy materials at base of building with lighter materials above.

Figure 66. Example of three tier landscape system.

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. **See Figure 67.**
- Planting materials shall be used in plazas or gathering areas to provide shade and soften the appearance of hard surfaces. Water features and public art are also encouraged in these places. **See Figure 68.**
- Trees located along street frontages shall be selected to match or complement existing or proposed street trees in the public right-of-way.
- A minimum five-foot landscape strip shall be used along circulation aisles in parking lots, and along building side/rear elevations if a walkway is not used. A landscape strip is also encouraged in nonpublic areas and service areas between pavement and buildings.
- On-site water filtration features and bio-swales are strongly encouraged, and can also be used as buffering methods for adjacent businesses.
- Drought tolerant and low-water trees, vines, and groundcovers shall be used on-site. When feasible, drip irrigation systems shall be installed to provide on-site vegetation with appropriate irrigation and ensure the highest possible volume of water conservation.
- Planting materials shall be used to provide a buffer against noise, and may be integrated with walls or fences to achieve desired sound reduction and appearance.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.

Figure 67. Highlighting entry points.

Figure 68. Public plaza area within commercial development incorporates water feature.

- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### Site Furniture

- Outdoor furniture and fixtures (e.g., lighting, directional signs, trellises, raised planters, works of art, benches, trash receptacles, fencing, etc.) shall be integral elements of the building and landscape design. **See Figure 69.**
- Outdoor furniture shall be of a sturdy construction to withstand daily use. Wood should be avoided.
- Outdoor furniture shall be located so it will not conflict with the pedestrian and motor vehicle circulation patterns. **See Figure 70.**
- Outdoor seating should be shaded.

Figure 69. Trellis.

Figure 70. Outdoor furniture outside of pedestrian walkway.

### Paving

- Decorative paving shall be incorporated into courtyards, plazas, pedestrian walkways, and crosswalks. **See Figure 71.**
- Paving materials shall complement the architectural design of the building and landscape design of the project. The use of stamped concrete, stone, brick, permeable pavers, exposed aggregate, or colored concrete is encouraged. The use of slippery materials (e.g., polished marble or granite) is prohibited.

Figure 71. Enhanced paving in pedestrian areas.

## E. Special Commercial Uses

### 1. Mini-Storage Facilities

#### Site Design

- Offices and customer service areas shall be located adjacent to the street frontage to provide convenient access and help visually break up the front façade.

#### Building Design

- Long, flat, unarticulated walls shall be avoided along street frontages. **See Figure 72.**
- Building walls and screen walls shall incorporate substantial articulation, and changes in plane and height to add visual interest.
- A minimum of two different building materials shall be used on building walls and screen walls adjacent to street frontages (e.g., stucco, brick, stone).
- Building materials, textures and landscaping shall be chosen to deter graffiti.

Figure 72. Articulated wall of mini-storage facility.

### 2. Parking Garages

#### Site Design

- A minimum 5-foot wide landscaped strip shall be provided on all sides of the parking structure.

#### Building Design

- Parking garages shall be designed to help reduce the mass and scale of the garage and to ensure their compatibility with surrounding uses.
- Conceal view of vehicles in the garage through a combination of screen walls and plantings. **See Figure 74.**

Figure 74. Parking structure with landscaping.

- Avoid a monolithic appearance. This can be accomplished as follows:
  - Minimize horizontal and vertical banding by balancing both horizontal and vertical elements.
  - Use simple, clean geometric forms, and coordinated massing.
  - Step back upper levels of the garage 5 to 10 feet above the first floor. **See Figure 75.**
- Coordinate openings in the parking garage with the size and modulation of adjacent windows and structural bays.
- Size openings in the parking garage to resemble large windows as in an office building.
- Use masonry materials that are predominantly light in color, but avoid unpainted concrete.
- Avoid a sloping ramp appearance by providing level and uniform wall planes between floors.
- Visually define and differentiate between pedestrian and vehicular entrances through appropriate architectural detailing. **See Figure 76.**

Figure 75. Horizontal and vertical articulation breaks up parking structure elevation.

Figure 76. Paving differentiates between pedestrian and vehicular entries.

### Access and Circulation

- Vehicle stacking areas for entering and exiting traffic shall be sufficient in length to minimize traffic backup into surrounding streets or within the garage. A minimum of two vehicle lengths of stacking distance shall be provided between the back of the sidewalk and the control gate.
- One inbound lane shall be provided for a garage with a capacity of up to 500 vehicles. At least two inbound lanes shall be provided for garages with a capacity of more than 500 vehicles.
- The maximum aisle length shall not exceed 400 feet without providing a cross aisle.
- Ramp grades shall not exceed 10 percent and parking areas should not exceed a slope of four to five percent.

### Security and Lighting

- The design of the garage shall eliminate possible hiding places and openings that could allow random pedestrian access.
- During periods when parking activity is substantially less than the garage capacity (i.e., during night operations), there shall be a means of securing unused parking levels from use, including stairwells and elevators. If the garage is not operated on a 24-hour basis the entire facility shall be secured from access during hours when the facility is closed.
- For security reasons, at least one or two sides of the stair tower shall include glass running vertically the height of the tower. Elevators shall be provided with glass-back cabs and shafts. **See Figure 77.**
- Stairs and elevators shall be located adjacent to a street on the exterior of the structure where lobbies can be exposed to outside view.
- The use of security cameras is required.

Figure 77. Glass-back elevator cab and shaft.

- A minimum of five foot-candles shall be provided inside the structure and a minimum of three foot-candles for exterior parking areas. Higher levels are recommended for remote areas subject to security problems such as stairways, elevators, and other pedestrian access points.
- Lighting levels shall be equally distributed to provide uniform illumination over all parking areas.
- Light sources shall be shielded so that the source of the illumination is not seen from outside the structure.

### 3. Service Stations

#### Site Design

- The site shall be designed to accommodate anticipated circulation patterns and those patterns should be defined by paving and by well-placed landscaped areas.
- In areas developed with buildings adjacent to the sidewalk, service stations shall also be oriented to the sidewalk, placing any service bay door and car wash openings on the rear of the structure.
- Where commercial development abuts the service station, two-way vehicular access integrated with the adjacent commercial development shall be provided where feasible.
- The site design for projects located at street corners shall provide a strong design element at the corner to help frame the public right-of-way and anchor the corner. **See Figure 78.**

Figure 78. Corner landscaping element.

- Parking spaces for vehicles left for repair shall be located in the least visible areas of the site and screened from public view.
- Service or car wash bays shall not face toward a public street.
- Work bays shall be oriented so that the interior of the bays are not visible or audible from a public street. **See Figure 79.**
- Each pump island shall include a vehicle stacking area for at least two vehicles (38-feet), on at least one end of the pump island and shall not restrict vehicle circulation and parking areas.
- A gasoline tanker truck unloading zone shall be provided and shall not obstruct vehicle circulation and parking areas.

Work Bays

Figure 79. Work bays face interior.

### Building Design

- Service station buildings shall be designed to complement and be compatible with the predominant architectural theme and scale of the area. If located within a multi-use center, the architectural design shall be compatible with the design of the center.
- The design of the building should be clean and simple, and shall relate to surrounding buildings through use of similar scale, materials, colors, and/or detailing.
- Building elevations facing public streets shall be architecturally detailed to provide interest and the appearance of quality development.
- The roof design of service stations, including pump island canopies, shall incorporate full, pitched roof treatments with a low to moderate slope. **See Figure 80.**
- Building materials shall have the appearance of substance and permanency (e.g., masonry).

Figure 80. Sloped roof on pump island canopies.

## Landscaping and Walls

- A three-foot high, landscaped berm, a dense hedge, or a low wall shall be provided along all street frontages where parking is provided. **See Figure 81.**
- A minimum six-foot high decorative masonry wall shall be provided along side and rear property lines not abutting public streets. A minimum five-foot wide landscaped planter shall be provided adjacent to the wall in areas accessible to the public.

Figure 81. Landscaped berm.

## Site Elements

- Gates, fencing, and walls shall remain free of signs or other advertisements.
- The use of chain-link fencing is prohibited if visible from a public street.
- Where security is an issue, fencing shall consist of open grille work, and the use of surveillance cameras is encouraged.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

## 4. Shopping Centers

### Site Design

- Portions of primary buildings and/or freestanding satellite buildings shall be located at the street setback lines to enclose the site and help frame the street. **See Figure 82.**
- Buildings within the center shall have a logical spatial and functional relationship to each other and shall provide for convenient pedestrian circulation throughout the center.
- Parking shall be provided within convenient walking distances of all tenants. Walking paths to buildings from the public street shall be provided. **See Figure 83.**

Figure 82. Buildings placed at street

Figure 83. Walking paths.

- To reduce the visual impact of large paved areas, parking lots shall be broken up into smaller areas separated by landscaping, pedestrian circulation areas and drive aisles.
- Storage areas and loading facilities shall be limited in number and shall be designed, located, and screened to minimize their visibility from outside public areas and surrounding streets.

### Building Design

- Buildings, hardscape, landscape, site furnishings and signage should reflect a unified theme. **See Figure 84.**
- Long, linear buildings shall be avoided. Where such buildings are unavoidable, their length shall be mitigated by changes in building height, wall plane, and spatial volumes and by varied use of window areas, arcades, roof elements, and building materials. **See Figure 85.**
- If the shopping center contains a large scale building, integration of smaller-scale shops along the exterior of the building with entrances from the exterior of the building are desirable in order to create a more human scale and pedestrian-oriented character.
- Side and rear elevations of commercial buildings that are visible from public rights-of-way shall be architecturally consistent with the front elevations of the building.
- Blank walls adjacent to main pedestrian areas shall be avoided.
- Flat roofs, mansard roofs, and veneer parapets are strongly discouraged in favor of full, pitched roof treatments. In large centers, a combination of flat roofs with decorative cornices and full, pitched roofs may be acceptable if the design presents a balanced appearance. **See Figure 86.**

Figure 84. Unified theme.

Figure 85. Articulation along wall plane.

Figure 86. Appropriate roofing.

- All roof-top and ground-mounted equipment shall be screened from view.
- Outdoor sales and storage areas shall be designed to blend with the architecture of the main building. The height of the screening elements shall be tall enough to screen all stored materials. **See Figure 87.**

Figure 87. Outdoor sales area.

### **9.10 Development Incentives**

This Section offers development incentives to produce greater land use efficiencies and reduce incremental costs for new development.

#### **A. Applicability**

The incentives in this Section shall apply to all new development that meet(s) the applicable eligibility criteria.

#### **B. Definitions**

For the purposes of this Section, lot consolidation and lot integration shall have the following meanings:

1. Lot consolidation. A legal action in which a lot line is removed or abandoned; a lot line is adjusted; lots are merged; or other equivalent action is taken, for the purpose of allowing a structure or development to be built so that it extends over what were previously two or more separate lots. A lot consolidation cannot create additional lots and cannot make existing lots nonconforming. All lots must be identical in.
2. Lot integration. The comprehensive planning and improving of contiguous lots under multiple ownership as an integrated group, typically involving deed restrictions, cooperative agreements, reciprocal easements, or similar recorded instruments to bring about development that is comparable to what could occur if the lots were under common ownership.

#### **C. Lot Consolidation Incentives**

1. Eligibility requirements. In order to be eligible for the by-right development incentives indicated in Subparagraph 2, below, the minimum consolidated lot size for a development shall be 97,500 square feet.
2. By-right incentives. Eligible projects shall receive one or more of the following incentives:
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review), irrespective of the number of lots involved.
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 9.6 Parking and Loading Standards, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio (FAR) and in maximum height shall be in the amounts listed in Table 9-10 – Allowable Bonuses for Lot Consolidation. The intensity and height bonus incentives shall apply to the total gross square footage of the consolidated lots.

**Table 9-10 – Allowable Bonuses for Lot Consolidation**

| <b><i>Base Intensity (FAR)</i></b> | <b><i>Allowable Intensity Bonus</i></b> | <b><i>Base Height</i></b> | <b><i>Allowable Height Bonus</i></b> |
|------------------------------------|-----------------------------------------|---------------------------|--------------------------------------|
| 0.8                                | 10%                                     | 100 ft                    | 25 ft                                |

**D. Green Building Incentives**

1. Eligibility requirements. Projects that are seeking green building certification by a third-party entity (e.g., LEED, etc.) shall be eligible for the by-right development incentives indicated in Subparagraph 2.
2. By-right incentives.
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review).
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 9.6 Parking and Loading, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio (FAR) and in maximum height shall be in the amounts listed in Table 9-11 – Allowable Bonuses for Green Building. The intensity and height bonus incentives shall apply to the total gross square footage of the project site.

**Table 9-11 – Allowable Bonuses for Green Building**

| <b><i>Base Intensity (FAR)</i></b> | <b><i>Allowable Intensity Bonus</i></b> | <b><i>Base Height</i></b> | <b><i>Allowable Height Bonus</i></b> |
|------------------------------------|-----------------------------------------|---------------------------|--------------------------------------|
| 0.8                                | 10%                                     | 100 ft                    | 25 ft                                |

**E. Application and Review Process for Incentives**

1. Written submittal. Interested parties shall submit a written request for approval of incentives to the Director of Community Development on forms provided by the Community Development Department.
2. Determination. The Director of Community Development shall determine whether the proposed new development meets the eligibility criteria in Paragraphs C.1 . or D.1. Additional factors to be considered when reviewing applications for incentives shall include the following:

- a. Detriment. The proposal will not detrimentally affect access, design, or other public safety and welfare concerns.
  - b. Covenants or conditions. The proposal will not violate restrictive covenants contained on the face of the final plat or conditions of plat approval.
  - c. Right-of-way easements. The proposal will not invalidate any easement(s) unless the adjustment establishes replacement easement(s) that is properly filed with the city.
3. Conditions. Conditions may be imposed in connection with the granting of any incentive where the Director of Community Development deems that conditions are necessary to protect the public health, safety, and welfare.

### **9.11 Entitlement Procedures**

#### **A. Purpose**

These administrative procedures have two major purposes:

1. Ensure that development conforms to the SWIP Specific Plan ("Plan").
2. Ensure that the City's review is as expedited as possible while remaining legal and proper.

#### **B. Summary of Processing Procedures**

1. Conformity with the Plan. The Director of Community Development shall review each application for conformity with the development regulations in this Chapter. Conformity has two components:
  - a. Standards. Compliance with the Standards is mandatory and the City may not approve a project that fails to comply with the Standards.
  - b. Guidelines. The City may exercise discretion in evaluating the project's compliance with the Guidelines.
2. Project Review. Applications for development approvals shall be filed with the Department and will be returned for revision. Applications must strive to meet the "Guidelines," but applicants may propose alternate ways to achieve the goals of the Guidelines.
3. Timing of Permits and Approvals. Required planning approvals shall be obtained before the issuance of any grading, building, or other construction permit, and before the proposed use is constructed, otherwise established, or put into operation.
4. Processing Requirements. Applications for planning permits shall be processed in compliance with Table 9-12 – Hearing Bodies.
5. Timing of Project Review. Project review shall be required before the issuance of a Building or Grading Permit, Business License, or Certificate of Occupancy for any new structure (not including fences or walls) and/or existing structures to be reconstructed or remodeled (including facade improvements).

Table 9-12 – Hearing Bodies

| Reviewing Bodies                       |        |      |    |    |     | Appeal Body |    |
|----------------------------------------|--------|------|----|----|-----|-------------|----|
|                                        | D.A.B. | CD   | PC | CC | PR  | PC          | CC |
| Administrative site plan               | X*     | X    |    |    |     | X           |    |
| Administrative site plan, amendment    | X*     | X    |    |    |     | X           |    |
| Building relocation                    |        | X    |    |    |     |             | X  |
| Certificate of appropriateness         |        |      |    |    |     |             | X  |
| Code of the City of Fontana, Amendment | X      |      | Xf | X  |     |             |    |
| Conditional Use Permit                 | X      |      | X  |    |     |             | X  |
| Density bonus                          | X      | X    | Xf | X  |     |             |    |
| Design review                          | X      |      | X  |    |     |             | X  |
| Design review, amendment               | X      | X    | X  |    |     |             | X  |
| Design review, signs                   |        | X    |    |    |     | X           |    |
| Development agreements                 | X      | X    | Xf | X  |     |             |    |
| Development agreements, amendment      | X      | X    | Xf | X  |     |             |    |
| General plan amendments                | X      | X    | Xf | X  |     |             |    |
| Home occupation                        |        | X    |    |    |     | X           |    |
| Interpretation                         | X*     |      | X  |    |     |             | X  |

## Notes:

Decisions of any "Reviewing Body" may be appealed to the City Council, except where State law limits such appeal to the City Engineer. If the Planning Commission is listed above as the "Appeal Body", the Commission must first review an Appeal before it may be forwarded to the City Council for consideration.

DAB—Development Advisory Board

CD—Community Development Director

PC—Planning Commission

CC—City Council

PR—Parks and Recreation Commission

X\*—At the discretion of the Director of Community Development or his/her designee

X\*\*—If Public Park(s) are considered

X\*\*\*—City Engineer has final approval

f—Recommending body to the City Council

**C. Administration and Enforcement**

The Director of Community Development shall enforce the provisions in this Specific Plan. All officers, employees, and officials of the City of Fontana, who are vested with the duty or authority to issue permits or licenses shall conform with this Specific Plan and shall not issue any permit or license, or approve any use or building, which would be in conflict with this Specific Plan. Any permit, license or approval issued that is in conflict with the requirements of this Specific Plan shall be considered null and void.

**D. Amendments to the Specific Plan**

The SWIP Specific Plan may be amended utilizing the same procedures by which it was originally adopted. In addition, subsequent amendments to this Specific Plan shall demonstrate the amendment meets the intent of the Specific Plan's existing policy framework, or specific findings to demonstrate the amendment enhances the Plan or is necessary to more effectively implement the Specific Plan. All sections or portions of the Specific Plan proposed to be amended or that may be affected by the amendment must be identified during the amendment process. A concurrent amendment to the General Plan would not be required provided that the Director of Community Development determines that substantive changes would not influence the goals, objectives, policies, or programs of the General Plan.

Allowing flexibility in the administration of the Specific Plan enhances the effectiveness of the Specific Plan as a comprehensive, "living" planning document. The following minor modifications to the Specific Plan qualify for processing as an administrative amendment to the Specific Plan subject to the review and approval of the Director of Community Development:

- Changes in the location of infrastructure and public facilities (e.g., internal roads, drainage facilities, etc.).
- Minor change in roadway alignment.

**E. Similar Use Determination**

1. Applicability and Authority. Unlisted uses in Table 8-2 are prohibited uses, unless the Director of Community Development finds a proposed use to be similar to an expressly allowed use in compliance with this Section. A Similar Use Determination is a process for determining when an unlisted use is similar in nature to a permitted or conditionally permitted use and may be permitted. As specified by Municipal Code Section 30-4 Other Uses to be Determined by the Director of Community Development, the Director of Community Development shall have the responsibility and authority to make Similar Use Determinations.
2. Ministerial Action. A Similar Use Determination shall constitute a ministerial action.
3. Application Contents and Filing. An application for similar use shall be in writing on forms provided by the Director of Community Development.
4. Determination Findings. In determining "similarity," the Director of Community Development shall make all of the following findings:

- a. The characteristics of and activities associated with the proposed use are equivalent to one or more of the listed uses and will not involve a higher level of activity or environmental impacts than the uses listed in the land use district;
  - b. The proposed use will be consistent with the purposes of the applicable land use district; and
  - c. The proposed use will be consistent with the General Plan and this SWIP Specific Plan.
- 5. Notice. A Similar Use Determination shall be made in writing and shall contain the facts that support the determination. The Community Development Department shall maintain all determinations on record for review by the general public upon request. The notice shall include:
  - a. A brief statement explaining the criteria and standards considered relevant to the decision;
  - b. A statement of the standards and facts relied upon in rendering the decision; and
  - c. An explanation of appeal rights and appeal deadlines. The determination of similar use by the Director of Community Development shall be subject to appeal to the Planning Commission.

***F. Nonconforming Lots, Structures, and Uses***

- 1. Nonconformance provisions are established to:
  - a. Bring all uses, structures, sites and signs into conformance with the developmental requirements and design guidelines in the Code;
  - b. Limit the occurrences and extent of nonconformance by prohibiting expansion, intensification, reinstatement, alteration, restoration after destruction, and reestablishment after abandonment; and
  - c. Gradually phase out nonconforming uses, structures, lots, and signs.
- 2. Applicability
  - a. Nonconforming uses, structures, signs and lots may be maintained, expanded, altered and/or abated only in accordance with the provisions of this Specific Plan.
  - b. Any Designated Historic Landmark, or any property listed on the California Register of Historical Resources or National Register of Historic Places, shall be exempt from the provisions of this Section with respect to the restoration and maintenance of structures, provided that any construction plans are approved through a Certificate of Appropriateness by the Historic Preservation Commission/Planning Commission.

3. Nonconforming Uses. A use that lawfully occupied a building or land at the time this Specific Plan became effective, and that does not conform to the use regulations of the land use district in which it is located, is deemed a "legal nonconforming use." A legal nonconforming use may continue, subject to the following:
  - a. Discontinuation of Use
    - i. Loss of legal nonconforming status. If a legal nonconforming use is discontinued for a period of 90 or more days, regardless of the owner's intent, it shall lose its legal nonconforming status and the continued use of the property shall be required to conform to all provisions of this Specific Plan.
    - ii. Extension of legal nonconforming status. Wherein special circumstances exist, the Director of Community Development may extend the legal nonconforming status of a use, for up to an additional 90-day period. Furthermore, an additional extension may be granted by the Planning Commission, for up to an additional 90-day period. The total time period of all time extensions shall not exceed 180 days.
    - iii. Extension of legal nonconforming use.
      - (1) An application for a Minor Use Permit shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
      - (2) The application shall be reviewed by the Director of Community Development within 30 days following application filing. The Director of Community Development shall notify the applicant, in writing, as to whether the application is complete. If the application is not complete, the Director of Community Development shall specify those parts of the application that are not complete and shall identify the manner by which it can be made complete. If written notification is not provided to the applicant within 30 days following application filing, the application shall be deemed complete.
      - (3) The Director of Community Development shall investigate the facts bearing on the application and provide the information necessary for action on the application, consistent with this Specific Plan and the General Plan. The applicant shall have made a good faith effort through the submittal of documentation and has diligently pursued compliance with this Specific Plan.
      - (4) The application shall be reviewed by the Director of Community Development at a duly noticed public hearing, whom shall then approve, modify or deny such application. The decision of the Director of Community Development shall be final and conclusive in the absence

of a timely filed appeal to the Planning Commission. An appeal of the Director of Community Development's decision shall be filed within 10 days from the date of the decision of the Director of Community Development. An appeal of the Director of Community Development's decision shall be reviewed by the Planning Commission. The decision of the Planning Commission shall be final and conclusive in the absence of a timely filed appeal to the City Council.

- (5) The applicant may appeal the decision of the Planning Commission to the final deciding body, the City Council. The City Council decision shall be final and conclusive. If the application to extend the legal nonconforming use is approved by the City Council, the extension shall be granted for 90 days from the date of approval.
- (6) If the Director of Community Development or appointed designee has determined that the applicant has failed to show a good faith effort towards continually processing the extension of legal nonconforming use application (i.e., revising plans, withdrawing the application, placing the project on hold, etc.), the legal nonconforming use shall cease within 60 days from the application submittal date.
- (7) In granting an extension of the legal nonconforming status, the Director of Community Development may attach reasonable conditions and restrictions to the request, in addition to those required by this Specific Plan, which will ensure that the use:
  - Will not endanger the public health, safety or general welfare;
  - Will not injure the value of adjoining or abutting property;
  - Will not result in any significant environmental impacts; and
  - Will be in harmony with the area in which it is located.
- (8) In approving an extension of the legal nonconforming status, the Director of Community Development or Planning Commission shall consider and clearly establish the following findings of fact:
  - The non-conforming use has been discontinued within the 90-day period.
  - A physical and/or economic hardship has prevented the nonconforming use from being in compliance prior to the expiration of the 90 day period;
  - Approving the extension will not adversely affect the health, safety or general welfare.

- b. Change in Ownership, Tenancy or Management. A change in ownership, tenancy or management of a nonconforming use shall not affect its legal nonconforming status, provided that the use did not discontinue pursuant to Section (3.a.i) "Loss of legal nonconforming status" or the type of use and/or intensity of use do not change.

- c. New Development. New development on any lot or parcel upon which a legal nonconforming use exists shall require that all uses on the property conform to the provisions of this Specific Plan.
  - d. Alterations and Expansion of Use
    - i. A nonconforming use shall not be enlarged or extended in such a way as to occupy any part of any structure or property that it did not occupy prior to the creation of the nonconformity.
    - ii. A structure fully or partially occupied by any nonconforming use shall not be moved, altered or enlarged, unless required by law, or unless the moving, alteration or enlargement will result in the elimination of the nonconforming use.
  - e. Intensification of Use. A nonconforming use shall not be intensified in such a way as to increase the discrepancy between existing conditions and the standards set forth in this Specific Plan.
4. Nonconforming Structures. A structure lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of the land use district in which it is located, including setbacks, separations, height and design, is deemed a "legal nonconforming structure." A legal nonconforming structure may continue to exist, subject to the following:
- a. Damage or Destruction
    - i. A legal nonconforming structure that is damaged or partially destroyed by fire, flood, wind, earthquake or other calamity, or the public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented by reasonable care and maintenance of the structure, may be reconstructed up to the original size, placement and density, provided that total cost of such reconstruction does not exceed more than 50 percent of the structure's current fair market value. The structure may be restored and the nonconforming use may be resumed, provided that restoration is started within six months, unless extended by the Director of Community Development, and diligently pursued.
    - ii. In the event that the cost of repairing such damage exceeds 50 percent of the current fair market value of the structure prior to such damage occurring, the structure may be reconstructed up to the original size, placement and density, subject to all of the following:
      - The Planning Commission, at a duly noticed public hearing, must find that continuing the nonconforming structure will not result in an annoyance to and/or reduction of any surrounding property; and
      - The extent of damage or partial destruction shall be based upon a comparison of the estimated cost of restoring the structure to its condition

prior to such damage or partial destruction with its value at the time the structure was damaged or partially destroyed. Estimates for such purpose shall be made by or reviewed by the Building Official; and

- The restoration is commenced within six months and diligently pursued to completion.
- An application for a Nonconforming Structure shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
- A structure or development that has been damaged or destroyed by fire, flood, wind, earthquake, or other calamity, or by public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented may be reconstructed up to the original size, placement and density, except a multiple family dwelling or development which has been abandoned for a period of 90 or more days prior to being involuntarily damaged or destroyed, or a multiple family dwelling or development constituting a public nuisance prior to being involuntarily damaged or destroyed may not be reconstructed unless the structure is made to comply to all provisions of this Specific Plan.

b. Alterations and Expansion

- i. A nonconforming structure shall not be moved, altered or enlarged so as to increase the discrepancy between existing conditions and the most current standard as prescribed by the land use district in which the structure is located, except alteration and/or enlargement to a single family dwelling conducted pursuant to section ("e") Nonconforming Single-Family Residential Structures".
- ii. Within land use districts, reasonable repairs and alterations may be made to legal nonconforming structures, provided that no structural alterations shall be made which would prolong the life of supporting members of a structure, such as bearing walls, columns, beams or girders. Structural elements may be modified only if such modification or repair is immediately necessary to protect the public health and safety, occupants of the legal nonconforming structure, or adjacent property, as determined by the Building Official. The total cost of such repairs or alterations may not exceed 50 percent of the replacement cost of the nonconforming structure.

- c. New Structures. Any new structure constructed on a lot or parcel with an existing legal nonconforming structure shall be constructed in conformance with all applicable provisions of this Specific Plan. However, in no case may a new nonresidential structure be constructed on the same lot as an existing legal nonconforming residential structure.

- d. Abatement of Nonconforming Structures Posing a Threat to the Public Health, Safety and General Welfare. A structure which is nonconforming because of a violation or deficiency that poses a threat to the public health, safety or general welfare, as determined by the Building Official, and which fails to resolve, repair or improve such, or to fully mitigate the hazard involved, shall be abated, condemned or demolished upon the issuance by the City of a nuisance abatement, condemnations or demolition order.
- e. Nonconforming Single-Family Residential Structures. In addition to the requirements of subsections a and d, above, a nonconforming single family residential lot and/or structure that was lawfully established and maintained before the adoption of this Specific Plan, but which under the provisions of this Specific Plan does not conform with the regulations of the land use district in which it is located with respect to use, design and/or development standards, and which is continuously used and maintained for single family residential purposes, shall be subject to the following:
  - i. Alterations and expansions to structures within nonresidential zones.
    - Necessary repairs and desirable alterations, as deemed appropriate by the Director of Community Development, may be made to a legal nonconforming single family residential structure that is nonconforming as to use.
    - A single family dwelling that is nonconforming as to its location within a land use district that does not permit single family dwellings, and in which the residential use was lawfully established and continuously maintained, shall be subject to the development regulations of the Municipal Code Chapter 30 Zoning and Development Code that pertain to the R1 zoning district and off-street parking and loading regulations.
- 5. Nonconforming Signs. A sign lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of Section 8.7 Sign Standards, is deemed a "legal nonconforming sign." A sign that presents a hazard to public safety, as determined by the City, shall be removed upon the issuance of a notice by the City. A legal nonconforming sign may continue to exist, subject to the following:
  - a. A nonconforming sign may not be altered, enlarged, extended, or moved, except in conformity with the requirements of Section 8.7 Sign Standards, or as otherwise required by law;
  - b. Where a use or a structure associated with a nonconforming sign is abandoned or discontinued, any sign associated with a new use of the site shall be in full conformity with the requirements of Section 8.7 Sign Standards.
- 6. Nonconforming to Development Standards. The development that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area, coverage, configuration, dimensions, parking, landscaping, screen walls, fences and enclosure trash receptacles, is deemed

"legal nonconforming," provided such development was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.

- a. A development that is nonconforming as to landscaping, screen walls, fences and enclosure of trash receptacles, shall be altered to comply with the district regulations covering the following standards, or as a condition of any subsequent Development Plan or Conditional Use Permit approval:
7. Nonconforming Lots. A lot or parcel that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area and configuration is deemed a "legal nonconforming lot," provided such lot or parcel was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A lot or parcel that is nonconforming as to minimum area or dimension shall be granted all development rights and uses of the land use district within which it is located.
    - i. The landscaping of setback areas insofar as a setback exists;
    - ii. The landscaping of parking areas, provided fulfilling the requirement does not reduce off-street parking or loading spaces to fewer than prescribed in this Specific Plan;
    - iii. The screening of storage areas; and
    - iv. The enclosure of trash receptacles.
8. Elimination of Nonconforming Adult Business Uses. Nonconforming adult business uses shall be eliminated in compliance with Municipal Code Chapter 30 Zoning and Development Code.
9. Abatement of Nonconforming Uses, Structures, Lots and Signs. Whenever a use, structure, site or sign becomes nonconforming because of a change of land use district boundaries or a change of the regulations prescribed for the district in which the site is located, the period of time prescribed in Municipal Code Chapter 30 Zoning and this Specific Plan for the abatement period for the elimination of the use, the removal of the structure or sign, or the improvement of the lot or parcel shall begin on the effective date of the change of district boundaries or regulations.

### **10.1 Purpose**

The Slover East Industrial District (SED) is intended to provide opportunities for light and heavy manufacturing activities that are supported by trucking routes and the existing rail spur. In addition, it is intended to promote the continued use and expansion of existing industrial, distribution and logistics-based warehousing developments, and strategically located service commercial facilities. The District will accommodate pedestrian-oriented elements along Poplar Avenue, and contribute towards buffering adjacent residential neighborhoods to the east. General features of this District include:

- Preservation and revitalization of existing industrial uses
- Encouraging future development of distribution, logistics-based warehousing, and manufacturing uses
- Promotion of lot consolidation
- Encourage pedestrian-oriented elements along Poplar Avenue
- Provide opportunities for service commercial development along major intersections
- Landscape and streetscape enhancement
- Development that is compatible with adjacent residential uses

## **10.2 Applicability**

### **A. Projects Subject to Development Regulations**

This Chapter contains the development regulations that govern all future private development actions in the SED, including new construction, additions or renovations to existing structures and/or new land uses proposed for existing facilities.

### **B. Right of Continued Use**

This Chapter shall not require any change in any existing building or structure for which a building permit has been previously issued or for plans on file in the Community Development Department before the effective date of this Specific Plan. Changes in the property's ownership or tenants of existing uses shall likewise require no change in any existing building or structure. Nonconforming standards and provisions shall be governed by Section 10.11 Entitlement Procedures.

### **C. Other Requirements**

This Chapter does not eliminate the need for obtaining any other permits required by the City, or any permit, approval or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.

### **D. Types of Development Regulations**

The development regulations are of two types – Standards and Guidelines – as follows:

1. Standards address those aspects of development that are essential to achieve the goals of the Specific Plan. They include specifications for allowable land uses and site development (e.g., building height, setbacks, etc.). Conformance with Standards is mandatory. Standards are indicated by use of the words "shall," "must," or "is / is not permitted."
2. Guidelines provide guidance for new development in terms of aesthetics and design details. They are intended to direct building and site design in a way that results in the desired character for the SED. Whereas conformance with the Standards is mandatory, conformance with the Guidelines is preferred and/or recommended. Provisions that fall into this category are indicated by the use of the words "should," "may" or "are encouraged to." In various cases, the Guidelines provide a choice of treatments that will achieve the desired effect. Developers are permitted to propose alternative design details if they are able to show that such details implement the Specific Plan objectives with respect to the desired character of the SED.

### **E. Minimum Requirements**

The provisions in this Chapter shall be minimum requirements. When this Chapter provides for discretionary authority on the part of the Director of Community Development, Planning Commission, or City Council, that discretion may be exercised to impose more stringent requirements if deemed necessary to accomplish the objectives of the SED.

### **F. Overview of Development Regulations**

1. Relationship of Land Use Districts. The development regulations in this Chapter are applied to those properties that are within the SED. Exhibit 10.1 – Land Use Plan indicates the location of the SED and its relationship to the other land use districts in the Specific Plan area.
2. Standards, Guidelines and Procedures. The development regulations are divided into the following sections: 10.3 Allowable Land Uses and Permit Requirements; 10.4 Development Standards; 10.5 Landscape Regulations; 10.6 Parking and Loading Standards; 10.7 Sign Standards; 10.8 Public Right-of-Way Streetscape; 10.9 Design Guidelines; 10.10 Development Incentives; and 10.11 Entitlement Procedures. Projects must meet all development standards in order to achieve approval in the development review process. Projects are encouraged to adhere to the recommendations contained in Section 10.9 Design Guidelines.
3. Steps for Using Chapter. Table 10-1 – Process Procedures illustrates the steps for using this Chapter.

| <b>Table 10-1 – Process Procedures</b>                                                                                      |                                                          |                                      |

# Southwest Industrial Park Specific Plan

Slover East Industrial District

Exhibit 10.1 – Land Use Plan

### ***10.3 Allowable Land Uses and Permit Requirements***

This Section identifies allowable land uses and their permit requirements.

#### ***A. Allowed Uses***

Table 10-2 – Allowable Land Uses and Permit Requirements identifies the types of land uses allowed in the SED and the permit required to establish each use.

#### ***B. Uses Not Listed***

Uses not listed in Table 10-2 are prohibited land uses, until and unless the Director of Community Development makes a similar use determination in compliance with Subsection 10.11.C Entitlement Procedures -- Similar Use Determination.

#### ***C. Other Applicable Regulations***

See Section 5.9.B. Relationship to Zoning and Development Code.

#### ***D. Definitions***

Definitions for land uses are provided in Appendix A Definitions. If a definition is not provided, the definitions in the Municipal Code shall apply. The Director of Community Development shall interpret the definitions; make a similar use determination in compliance with Subsection 10.11.C Entitlement Procedures – Similar Use Determination; and/or refer any questions to the Planning Commission for its determination. For the purposes of this Specific Plan, the following definitions shall apply:

1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
2. Industrial Use: Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

(2) See Section 10.9E

## 10.4 Development Standards

New land uses and structures and alterations to existing land uses and structures in the SED shall be designed, constructed, and established in compliance with the requirements in this Section.

### A. *Intensity and Dimensional Standards*

Table 10-3 – Intensity and Dimensional Standards provides the required intensity and dimensional standards for proposed development. The Director of Community Development is authorized to approve modifications of 10 percent or less of any land use district setback, lot width, lot depth, building coverage, building height, or wall height standard in compliance with the administrative variance procedures in Municipal Code Section 30-51.6 (Findings necessary for granting a variance). See Exhibit 10-2 – Dimensional Standards.

The Director of Community Development may grant an administrative variance from the requirements of this chapter where practical difficulties, unnecessary hardships, or results contrary to the intent of this chapter would occur from the strict and literal interpretation and enforcement of the Code. An administrative variance may be granted upon conditions which will ensure the protection of the public safety, health and welfare. To grant an administrative variance, the Director of Community Development must find from the facts presented that the following conditions exist.

- (1) That because of circumstances applicable to the property including size, shape, topography, location or surroundings, the strict application of this chapter will deprive the property of privileges enjoyed by other property in the vicinity and under identical zoning classification;
- (2) That the granting of such an administrative variance will be subject to conditions assuring that the variance shall not constitute a grant of special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district in which the property is located;
- (3) That the administrative variance does not authorize a use or activity which is not a specifically allowed use in the zoning district in which the property is located; and
- (4) That the granting of one administrative variance will not be contrary to the general plan.

Table 10-3 – Intensity and Dimensional Standards

| Lot Size and Building Placement                                                 |                                                      |
|---------------------------------------------------------------------------------|------------------------------------------------------|
|                                                                                 | Industrial                                           |
| <b>INTENSITY</b>                                                                |                                                      |
| Floor Area Ratio (3)                                                            | 1.0 max. FAR                                         |
| <b>LOT DIMENSIONS</b>                                                           |                                                      |
| Lot Size                                                                        | 40,000 sq ft min.                                    |
| Lot Width (C)                                                                   | 200 ft min.                                          |
| Lot Depth (D)                                                                   | 175 ft min.                                          |

| Side (Interior) Setback (2)                                                     | None                                                 |
| Rear Setback (2)                                                                | None                                                 |
| Adjacent to Residential Truck District (2)                                      | 50 ft min                                            |
| Accessory Building Setbacks                                                     | Comply with setbacks applicable to primary structure |

Table 10-3 – Intensity and Dimensional Standards

| Building Height and Mass                            |                                            |
|-----------------------------------------------------|--------------------------------------------|
|                                                     | Industrial                                 |
| <b>HEIGHT</b>                                       |                                            |
| Primary Building                                    | 60 ft max                                  |
| Accessory Building                                  | 1-story or 14 ft max. to eave/parapet line |
| Interior (Floor-to-Floor, excluding parking levels) | Ground floor – 12 ft min                   |
| <b>UPPER STORY STEPBACKS</b>                        |                                            |
| All buildings regardless of street frontage         | Allowed.                                   |

## Notes:

- (1) Setback is measured from public right-of-way line.  
 (2) Setback is measured from property line.  
 (3) See Section 10.10 Development Incentives.  
 (4) Corner cut-off setbacks per Specific Plan.

- Ⓐ = Public Right-of-Way Line
- Ⓑ = Property Line
- Ⓒ = Lot Width
- Ⓓ = Lot Depth
- Ⓔ = Front/Side Setbacks – Secondary Highway/Collector Street
- Ⓕ = Front/Side Setback – Primary Highway
- Ⓖ = Front/Side Setback – Major Highway

Exhibit 10-2 – Dimensional Standards.

**B. Fences, Walls, and Screening**

1. Standards. Table 10-4 – Standards for Fences, Wall and Screening contains standards for fences, walls, and screening. Refer to Section 10.9 Design Guidelines for guidelines about the design, materials, and construction of fences, walls, and screening.

**Table 10-4 – Standards for Fences, Walls, and Screening**

| <b>Location</b>                                                                             | <b>Materials</b><br><i>See Section 10.9 Design Guidelines</i>                                                                                                  | <b>Maximum Height</b>                                                                                     |
|---------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Within front setback area                                                                   | Solid fencing/wall                                                                                                                                             | 36 inches; or<br>42 inches if abutting residential front yard                                             |
|                                                                                             | Open fencing/wall                                                                                                                                              | 6 ft                                                                                                      |
| Within street side setback area                                                             | Tubular steel construction allowed in required setback area if set back at least 15 ft from lot line. Solid masonry wall not allowed in required setback area. | 8 ft if necessary for security purposes, with 18-inch maximum width pilasters a minimum of 8 ft on center |
| Within interior side setback area                                                           | Any type of fence, hedge, or wall allowed, except that if abutting residential zone, solid masonry wall only                                                   | 8 ft                                                                                                      |
| Within rear setback area                                                                    | Any type of fence, hedge, or wall allowed, except that if abutting residential zone, solid masonry wall only                                                   | 8 ft                                                                                                      |
| Outside of a required setback area                                                          | Solid or open fencing/wall                                                                                                                                     | No height limit                                                                                           |
| Screening of outside storage materials and equipment from view from the public right-of-way | Solid fencing/wall                                                                                                                                             | 8 ft                                                                                                      |
| At intersections of alleys, streets, and driveways                                          | Solid or open fencing/walls                                                                                                                                    | 30 inches                                                                                                 |

Note: (1) All fences and walls shall meet the City's line of sight regulations, as determined by the City Engineer.

2. Materials.
  - a. Open fencing shall mean fencing with over 50 percent of the surface area open for free passage of light and air and through which the area behind the fence is visible to public view. See Exhibit 10-3 – Open and Solid Fencing.
  - b. Solid fencing shall mean fencing with 50 percent or less of the surface area open for free passage of light and air and designed to conceal the area behind the fence from public view. See Exhibit 10-3 – Open and Solid Fencing.
  - c. Barbed wire fences, electric fences, or similar fencing material is prohibited.
  - d. Chain link fencing is allowed on interior property lines that are not visible from public rights-of-way.

*Examples of Solid Fencing*

Exhibit 10-3 – Open and Solid Fencing.

3. Screening and buffering.

- a. Roof-mounted and ground-mounted mechanical equipment, utilities, storage, and solid waste storage areas shall be screened from adjoining properties and public right-of-ways by a visual barrier (e.g., wall, fence, landscape material, etc.) to the satisfaction of the Director of Community Development. Where only landscaping is used for screening, it shall be planted with five-gallon (minimum size) shrubs spaced to provide a continuous dense screen.
- b. Parking lot perimeters shall be screened and planted in compliance with Section 10.6 Parking and Loading Standards.

**C. Outdoor Activities and Storage**

- 1. Storage in Setback Areas. Material or equipment shall not be stored anywhere in the front yard area. Temporary storage of construction materials during construction on the same site is allowed. Boats, campers, motor vehicles, trailers, equipment, materials, or antenna may be stored in side and rear yards, provided that they are outside the required side and rear identified in Table 10-3 Intensity and Dimensional Standards.
- 2. Limitations on Outdoor Uses
  - a. All uses shall be conducted entirely within a completely enclosed building that is attached to a permanent foundation, except approved outdoor dining areas, vehicle sales and rental businesses, parking areas, nursery growing areas, industrial activities, truck trailer storage, oversize vehicle storage, and other approved uses that require outdoor activities.
  - b. Areas used for the approved outdoor storage of vehicles, equipment and/or building materials (raw or finished) may use compacted slag, gravel, or other similar material deemed suitable by the Director of Community Development.
- 3. Outdoor Wholesaling. Outdoor wholesaling of goods and materials shall comply with the following:
  - a. A building shall be provided on the same parcel or on an adjacent parcel associated with the same business.
  - b. All display materials, including vehicles, shall be set back five feet from any landscaped area and shall not be located on required parking areas.
  - c. The entire area used for display purposes shall be surfaced with asphalt or an equally serviceable hard pavement surface. The surface shall be maintained in good condition.
  - d. Display of equipment or materials, with the exception of vehicles for sale or rent, shall be screened by a visually solid masonry wall of minimum height six feet. The Planning Commission may determine through the design review process that the subject use requires a solid masonry wall higher than six feet.

- e. Outdoor display areas shall be maintained in a neat and orderly condition.

***D. Caretaker Housing***

Caretaker housing shall be:

- 1. Accessory to a principal use;
- 2. A maximum of 1,500 square feet total floor area unless otherwise approved by the planning commission;
- 3. Limited to one unit per lot; and
- 4. Subject to the setback requirements applicable to the principal structure with which it is associated.

***E. Solar Access***

A structure, fence, or wall shall not be constructed or modified, and vegetation shall not be placed or allowed to grow so as to obstruct more than 10 percent of the absorption area of a solar energy system on an abutting or adjacent lot at any time.

***F. Undergrounding of Utilities***

- 1. Utility service laterals to new development shall be installed underground.
- 2. Temporary overhead power and telephone facilities are permitted only during construction.
- 3. Placement, location and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.
- 4. Transformer enclosures shall be designed of durable materials with finishes and colors used that are compatible and harmonious with the overall architectural theme.
- 5. All utilities including, but not limited to drainage systems, sewers, gas lines, water lines, and electrical, telephone, and communications wires and equipment shall be installed and maintained underground. Placement, location, and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission before any administrative or discretionary approval.

***G. Registered Vehicle Storage***

Registered vehicle storage will be defined as follows:

Registered Vehicle Storage means an off-street, ground level open area that allows parking for the purpose of storage of vehicles, including but not limited to, truck, truck-trailer, buses, boats, construction equipment, recreational vehicles, and automobile storage. These vehicles are to be stored and are not for sale, rental, or leasing. Maintenance or vehicle repair is not permitted at the premises unless otherwise separately allowed and approved under a separate conditional use permit.

Special use regulations are proposed to be applied to Registered Vehicles Storage. All businesses with registered vehicle storage shall comply with the following provisions:

1. The entire storage area shall be surfaced with asphalt, cement or an equivalent material. For specified and delineated storage areas, excluding required drive aisles and required non-storage parking, slag or gravel shall be considered as an equivalent paving material on a case-by-case basis. The surface material shall be striped as required (when feasible) and shall be maintained in good condition.
2. All storage areas shall clearly be identified on the site plan for the property and shall be screened from view from the public right-of-way by one or more decorative block screening walls. All screening walls adjacent to a public right-of-way shall have a minimum height of eight (8) feet and shall not be located in a required landscape setback area. Additional wall height and/or berming may be added as needed to satisfy screening requirements.
3. A line-of-sight analysis clearly demonstrating that all registered vehicles proposed to be located in the storage area(s) are screened from view from all adjacent public rights-of-way at all times shall be required with all proposals and/or applications. For the purpose of the line-of-sight analysis, the assumed height of the vehicles to be stored shall be fourteen feet and six inches (14'6"). To meet this requirement, storage areas shall be set back from required screening walls to provide the required line-of-sight clearance for screening. Storage areas which have been set back to provide the required line-of-sight clearance for screening shall be identified on the site plan and shall be marked and maintained at all times in a manner consistent with the site plan.
4. All vehicles stored on the premises shall have a valid vehicle registration from the State of California or other similar government entity and shall be maintained in an operable condition at all times.
5. Fire access lanes of a minimum twenty-six feet (26') in width shall be required along the interior perimeter of any required decorative block screening wall adjacent to a public right-of-way. Additional fire access lanes shall be provided as required by the Fire District. This required fire access lane may be used to meet the line-of-sight clearance set back requirement above.
6. All on-site fire access lanes, drive aisles, required parking, etc., (but not including Identified and marked vehicle storage areas) shall be paved with asphalt, cement or an equivalent material; gravel or slag in these lanes is specifically prohibited.

7. A guard station or similar structure shall be required near the primary access to the premises. The minimum size of such structure shall be sixteen square feet.
8. A residence for a caretaker may be permitted and incorporated into the project subject to the approval of a Conditional Use Permit application.
9. Permanent on-site security lighting shall be required to be designed and installed to the standards and satisfaction of the Police Chief or his/her designee.
10. Fire hydrants shall be required to the satisfaction of the Fire District.
11. Vehicles stored on the premises shall not themselves be used as storage containers to store materials in them. With prior 72 hour written notice to the property and/or business owner, any and all stored vehicles shall be open to inspection for the purpose of enforcing this provision.
12. To provide adequate space dimensions to accommodate the movement off large vehicles on the site, the minimum lot size shall be two (2) acres with a minimum lot width of 300 feet and a minimum lot depth of 300 feet. Irregular or unusually shaped lots may require additional minimums to meet the intent of this regulation, as shall lots with unusual, irregular, or severe topographic features or changes.
13. Landscaping adjacent to the public right-of-way is required per the Code. Interior lot landscaping shall not be required for any internal area (wall perimeter, parking area, storage area, etc.) enclosed by the required screening walls. Incidental landscaping may be required as needed to satisfy screening and other requirements in interface area(s) open to public view (entry gate, guard station, etc.)

## 10.5 Landscape Standards

### A. Required landscaping

This section provides the required minimum standards for all landscaped areas within any new and rehabilitated private development.

1. Landscaped area means the entire parcel less the building footprint, driveways, nonirrigated portions of parking lots, and hardscapes (such as driveways, approaches and sidewalks). Decorative hardscapes used to enhance the landscape will be considered as part of the landscape area; this would include such things as cobble rock, decomposed granite, brickwork, stamped concrete, gravel, pavers, and water features.
2. Landscape setbacks along public right-of-ways shall incorporate landscape buffers with undulating and variable height earth-mounding (berms), and/or low walls, and required plant materials as shown in Table 10-5 Landscape Standards.
3. Block wall and wrought iron fencing shall be located behind landscape setback area(s).
4. The developer shall submit to the City's Department of Engineering, a Landscape Documentation Package that conforms to the requirements of the Water Efficient Landscape Ordinance in Municipal Code, Chapter 28 Vegetation.
5. All new development landscaping shall comply with the standards shown in Table 10-5 – Landscape Standards. Additional guidelines that should be considered are addressed in Section 10.9 Design Guidelines.
6. The Recommended Plant Materials Palette, Table 10-6 can be found immediately after this section. The plant materials palette is provided to ensure the installation of drought-tolerant, water efficient landscaping that will provide wind breaks and thrive in the local climate conditions. In an effort to provide visual elements that distinguish this district from others, please note that turf (grass) does not appear in the Plant Materials Palette, and shall be prohibited, in lieu of drought-tolerant ground covers.
7. Public right-of-way improvements, including street improvements, streetscape/landscape (parkway) improvements, and street tree requirements, are in Section 10.8 Public Right-of-Way Streetscape.

**Table 10-5 – Landscape Standards**

*Note: The Director of Community Development may require additional setbacks.*

|                                                                                                      |                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Minimum Landscaped Area<br>Mixture of ground cover, shrubs, trees, and decorative hardscape features | 15% of total site area, not including areas covered by buildings, structures, or areas used for approved outside storage, loading, or other activities.<br><br>25% of total site area, for hotels, not including areas covered by buildings, or areas used for approved outside storage, loading, or other activities. |
| Decorative hardscape features<br>Brick, stone, art, fountains, ponds, etc.                           | Maximum 15 % of the total required landscaping of site area                                                                                                                                                                                                                                                            |
| Minimum plant sizes in landscaped areas                                                              | Minimum Ratio 1 tree/500 SF of landscape area                                                                                                                                                                                                                                                                          |
| Trees                                                                                                | 50% - 15-gallon<br>40% - 24-inch box<br>10% - 30-inch box or greater                                                                                                                                                                                                                                                   |
| Shrubs                                                                                               | 50% - 5-gallon<br>50% - 1-gallon                                                                                                                                                                                                                                                                                       |
| Groundcover (sod or hydro seeding)                                                                   | 12-inch maximum on center spacing that will cover area within one year of initial planting                                                                                                                                                                                                                             |
| Street trees in parkways per Master Plan of Parkway Trees                                            | 1 tree of not less than 24-inch box size for each 30 linear feet of street frontage<br><br>In parkways of inadequate width, street trees shall be planted in abutting setback/yard, in addition to the required buffer landscaping in setback area                                                                     |
| Landscape buffer in front setback area                                                               | 1 tree for each 20 linear feet minimum of street frontage and three 5-gallon shrubs for each tree<br><br>Undulating earth berms with informal tree and shrub massing and/or low decorative walls may be utilized.<br><br>Maximum slope: 3:1 for berms                                                                  |
| Additional landscape requirements                                                                    | 1 tree for each 800 square feet minimum of other required landscaped area and 8 shrubs for each tree.                                                                                                                                                                                                                  |

**B. Recommended Plant Materials Palette**

Table 10-6 Recommended Plant Materials Palette provides a listing of primarily drought-tolerant trees, shrubs, and ground covers to provide water-efficient landscaping in new projects. The limited selection of landscape material in the palette is envisioned to assist the user in incorporating sustainable landscaping into the project, while including enough variety of size, form, and density, to meet the requirements within buffer setbacks and screening techniques. Final selection shall be approved the City. The Director of Community Development shall approve artificial turf.

*Iva hayesiana*

**Trailing Lantana**  
*Lantana montevidensis*

## **10.6 Parking and Loading Standards**

### **A. Applicability**

This section contains regulations for off-street parking and loading. Regulations identify required number of parking and loading spaces for all new development projects and those proposing substantial modification to existing buildings. Refer to Municipal Code Chapter 30 Zoning and Development Code for all parking and loading-related information or regulations not specifically addressed in this section.

### **B. General Parking and Loading Regulations**

1. Methods of Calculation.
  - a. Multiple Uses. If more than one use is located on a site, the total number of required off-street parking and loading spaces shall be the sum of the requirements for the various uses computed separately. If individual uses on the same site have a floor area less than that for which loading spaces would be required, then the total gross floor area of all uses on the site or lot shall be used in determining the required number of loading spaces.
  - b. Fractional Number. Whenever the computation of the required number of off-street parking or loading spaces results in a fractional number, one additional space shall be required for a fraction of more than one-half, but shall not be required for a fraction of one-half or less.
2. Off-Site Location. Required off-street parking spaces shall be located on the same property as the use that they are intended to serve. Where the required parking spaces cannot be accommodated on the same property, they may be located in a separate off-site parking facility that is not more than 300 feet from the use(s) they serve.
3. Shared Use. Required off-street parking and loading spaces shall not be considered as providing parking or loading spaces for any other use, except where shared use facilities are approved in compliance with Subparagraph 5 Adjustments to Parking Requirements, below.
4. Uses Not Specified. For uses not specified, the Director of Community Development shall determine parking requirements based upon the requirements of the most similar use. See SubSection 9.11.C Entitlement Procedures -- Similar Use Determination.
5. Adjustments to Parking Requirements.
  - a. Administrative Variance. The Director of Community Development is authorized to approve alternate parking plans involving a modification of 10 percent or less of any of the off-street parking and loading standards in compliance with Section 30-51.5 of Municipal Code Chapter 30.

- b. **Parking Study Option.** An applicant may submit a separate parking and loading study for new development to the Director of Community Development for review. A parking and loading study shall provide sufficient data and information to justify the need for adjustments to the parking and loading requirements and shall analyze whether:
  - i. Adequate off-street parking will be provided for the project;
  - ii. The project demonstrates the use of creative design concepts, including but not limited to shared parking facilities, transit accessibility, pedestrian amenities, and bicycle amenities;
  - iii. Environmental impacts associated with the project will not be increased by the modification of standards; and
  - iv. Traffic safety and pedestrian safety will be enhanced by the modifications.
- c. **Shared Use Facility.** Required off-street parking and loading spaces may be considered as providing parking or loading spaces for another use where joint facilities serving more than one use contain no less than the total number of spaces deemed necessary for each individual use added together with other uses. Where adjoining uses on the same site have different hours of operation with minimal conflict, the Director of Community Development may determine that some or all of the same spaces may be counted as satisfying the requirements for both uses, provided that the number of spaces shall not be less than the prescribed for the use requiring the greater number.

**C. Required Number of Parking Spaces**

Each land use shall provide the number of off-street parking spaces indicated in Table 9-7 – Parking Requirements by Land Use, except where adjustment has been granted in compliance with Subparagraph 9.6.B.5 Adjustments to Parking Requirements, above. For the purposes of this Section, the following definitions shall apply:

- 1. **Commercial Use:** Activity involving the sale of goods or services carried out for profit.
- 2. **Industrial Use:** Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

**Table 10-7 – Parking Requirements by Land Use**

**D. Required Number of Loading Spaces**

Each land use shall provide the number of off-street loading spaces indicated in Table 10-8 – Loading Space Requirements by Land Use. Requirements for uses not specifically listed shall be determined by the Director of Community Development based upon the requirements for comparable uses and upon the particular characteristics of the proposed use. For other standards (e.g., size of loading spaces, location, turning radius, etc.), refer to Article XI Off-Street Parking and Loading Standards, Division 4 Loading Area Regulations, in Municipal Code Chapter 30 Zoning and Development Code.

| <b>Distribution, Wholesaling and Warehousing Uses</b>                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                            |                 |
| Warehousing Facilities                                                                                                                                                                                                                                                                                                                                                       | 5,000 - 30,000 sq ft: 1 space; and<br>1 additional space for each additional 30,000 sq ft                                                                                                                                                                                                                                                                                  | Tractor Trailer |
| <b>Notes:</b><br>(1) A van loading space shall be a minimum of 12 ft wide by 19 ft long with a minimum 10 ft overhead clearance.<br>A truck loading space shall be a minimum of 12 ft wide by 45 ft long with a minimum 14 ft overhead clearance.<br>A tractor trailer loading space shall be a minimum of 12 ft wide by 70 ft long with a minimum 14 ft overhead clearance. |                                                                                                                                                                                                                                                                                                                                                                            |                 |

### **E. Landscaping Standards for Parking Areas**

Within any parking area, one tree shall be planted for every five single-row parking stalls or 10 double-row parking stalls. Eighty percent of these shall be 15 gallons in size and the remaining 20 percent shall be 24-inch box or larger in size. If for some reason the contractor is unable to distribute trees in the interior of the parking area in compliance with these standards, the Director of Community Development may approve the placement of no more than 40 percent of the trees within the perimeter of the parking area. Planters shall not have a dimension less than four feet, excluding the thickness of the curbing. These requirements may be reduced for industrial parking areas that are screened from public view.

1. Parking areas shall contain a minimum landscape area equivalent to 30 percent of the total required 15 percent landscaping for the total site area.
2. Parking area perimeter landscaping.
  - a. Parking areas for nonresidential uses abutting or adjacent to residentially zoned property shall provide a landscape strip that is a minimum of 10 feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line bordering the residentially zoned property. Parking areas shall be screened from the residentially zoned property by a solid decorative masonry wall that is a minimum of six feet in height.

- b. Parking areas for nonresidential uses abutting or adjacent to non-residentially zoned property or a street shall install a landscape strip that is a minimum of five feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line or the parking area and the street right-of-way. This requirement may be reduced or modified if a joint access agreement exists that is satisfactory to the Director of Community Development. Parking areas shall be screened from streets through combinations of plant materials, earth berms, raised planters, grade separations, or low walls. Slopes shall not exceed three to one or exceed 36 inches in height measured from the parking lot surface.
  - c. Plant materials, walls, or structures within a traffic sight area shall not block sight lines from driveways to streets and shall not exceed 36 inches in height.
  - d. End of aisle spaces adjacent to landscape finger shall be two feet wider for step out area.
3. Parking area interior landscaping.
- a. Tree number and location. One tree shall be provided for each four parking spaces and shall be evenly spaced throughout the interior parking area at a rate of one tree for every eight parking spaces. See Exhibit 10-4 – Parking Lot Landscaping. The required number of trees in the interior area shall not include trees required around the parking area perimeter. Trees are not required for tractor-trailer parking. A minimum of one cluster of trees shall be provided for each 100 feet of a row or double row of parking spaces. Trees shall be located in planters that are bounded on at least two sides by parking area paving. Planters shall have a minimum exterior dimension of five feet.

Exhibit 10-4 – Parking Lot Landscaping.

- b. Tree size. All trees within the parking area shall be a minimum 24-inch box container at time of planting.
- c. Landscape protection. Landscaping shall be protected by concrete curbs of at least six inches in height. An end-of-aisle planter shall be provided at the ends of all parking aisles. Finger aisle planters shall be a minimum of nine feet wide and end-of-aisle planters shall be a minimum of seven feet wide, as measured from the

inside of the curb. The parking space side of finger and end-of-aisle planters shall have a 24-inch wide concrete surface measured from the face of the curb. Planters shall be landscaped with a mixture of trees, shrubs, and ground cover. Planting areas shall have round corners instead of 90 degree corners and shall be shaped to allow vehicle movements. The Director of Community Development may approve alternative barriers designed to protect landscaped areas from vehicle damage. Wheel stops may be placed to allow for two feet of vehicle overhang area within the dimension of the parking space. To increase the parking lot landscaped area, a maximum of two feet of the parking stall depth may be landscaped with low-growth, hardy materials in-lieu of paving, allowing a bumper overhang while maintaining the required parking dimensions. However, the overhang area shall not be counted as part of minimum landscape area required by paragraph (1) above, and when adjacent to a required landscaping strip shall be in addition to the minimum required width. Fixtures (e.g., lights, sprinklers) that are higher than the curb are prohibited within a bumper overhang area. Curbing that creates a bumper overhang barrier shall not exceed a height of five inches.

- d. Parking areas with more than 100 spaces shall provide an appropriate entry feature consisting of a concentration of landscape elements, including trees, flowering plants, enhanced paving, and project identification.
4. Parking structures. A landscaping strip 10 feet wide shall be provided on all sides of a parking structure. One tree shall be provided for each 20 to 40 feet of perimeter of the structure, based on species selected. These trees shall be distributed evenly throughout the subject landscape area.

## 10.7 Sign Standards

### A. Applicability

This section contains standards and guidelines for signage to ensure that signs are consistent with the overall quality and character of anticipated new development. Regulations identify permitted sign types; provide standards for number of signs, size, and location; and provide design guidelines for color, materials, and illumination. Please refer to the Fontana Municipal Code for all sign-related information or regulations not specifically addressed in this section.

### B. Standards and Guidelines

1. Standards. The following standards shall apply to all signs, regardless of type:
  - a. Sign types not listed in this Section are not permitted.
  - b. Linear Frontage Ratio. For each establishment, one and one-half (1 ½) square feet of total sign area shall be allowed for each linear foot of building frontage ("Linear Frontage Ratio"). Unless otherwise noted, all signs (including temporary signs) shall count toward the total sign area permitted based on the Linear Frontage Ratio. For multi-tenant buildings, each establishment shall be calculated individually. For corner establishments, each facade shall be calculated individually. Permitted sign area based on the linear frontage of one establishment or facade shall not be placed on another establishment or facade.
  - c. Signs shall not be animated.
  - d. Commercial messages that identify, advertise, or attract attention to a business, product, service, or event or activity sold, existing, or offered elsewhere than upon the same property where the sign is displayed are expressly prohibited.
  - e. In the event of a conflict between this Section and any other City regulation, the provisions of this Section shall apply.
  - f. All issues not specifically addressed herein (e.g., signage in the public right-of-way, exempt signs, permit processing, etc.) shall be addressed pursuant to the Fontana Municipal Code.
2. Guidelines. The following guidelines shall apply to all signs, regardless of type.
  - a. Design Compatibility
    - Provide signage that is compatible with the building architecture and coordinate sign materials and colors with the building facade/storefront design.
    - Place signs in accordance with facade rhythm, scale, and proportion.
    - Ensure that signs associated with multi-tenant buildings are complementary to one another. A consistent location for tenant identification signs is recommended.

b. Location

- Signs shall be placed at or near the public entrance to a building or main parking area to indicate the most direct access to the business.
- Signs shall not be located so that they cover or interrupt the architectural details or ornamentation of a building's facade.
- Signs shall not project above the edge of the rooflines and shall not obstruct windows and/or doorways.

c. Sign Legibility

- Avoid hard-to-read, intricate typefaces. Typefaces that are difficult to read reduce the sign's ability to communicate.
- Avoid spacing letters and words too close together. Lettering shall not occupy more than 75 percent of the sign face.
- Limit the number of lettering styles in order to increase legibility. Signs shall be limited to no more than two styles for small signs (generally up to 10 square feet) and three styles for larger signs.
- Use significant contrast through incorporating light colored letters and a darker, contrasting background to provide the most visible and best-looking image.
- Incorporate business identity symbols and logos.
- Logo means any symbol or any combination thereof adopted and used by an individual or corporation to identify goods made or sold or services rendered by an individual or corporation and to distinguish them from goods made or sold or services rendered by others and that is nationally or State of California registered.

d. Color and Materials

- Bright day-glo (fluorescent) colors shall be avoided as they are distracting and do not blend well with other background colors.
- Sign colors shall relate to and complement the materials or color scheme of the buildings, including accent and trim colors.
- Sign materials shall be selected with consideration for the architectural design of the building's façade and also contribute to the legibility of the sign.
- Construct signs of durable, high-quality materials.
- Wood, paper, and cloth signs, and painted wall signs are prohibited.

e. Illumination

- Individually illuminated letters, either internally illuminated or back-lighted solid letters (reverse channel), are a preferred alternative to internally illuminated plastic-faced cabinet signs.
- Signs shall be comprised of individual letters.
- The use of backlit, individually cut letter signs is strongly encouraged for all types of business and signs, including monument-type signs.

- Whenever indirect lighting fixtures are used, care shall be taken to properly shield the light source.
- f. Electrical Raceways and Conduits
- Electrical transformer boxes and raceways shall be concealed from public view.
  - All exposed conduit and junction boxes shall be appropriately concealed from public view.

### C. Sign Types

For the purposes of this plan, Table 10-9 Sign Types indicates the signs that are allowed in the Slover East Industrial District.

| Table 10-9 Sign Types |                                                                                                              |
|-----------------------|--------------------------------------------------------------------------------------------------------------|
| 1                     | <b>Grand Wall Sign</b><br>Non-residential uses with unfenestrated wall areas of 2,000 square feet or greater |
| 2                     | <b>Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                              |
| 3                     | <b>Projecting Sign</b><br>Non-residential uses with a dedicated ground floor entrance                        |
| 4                     | <b>Awning Valance Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 5                     | <b>Awning Side Sign</b><br>Non-residential uses with a dedicated ground floor entrance                       |
| 6                     | <b>Canopy Fascia Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 7                     | <b>Under-Awning or Under-Canopy Sign</b><br>Non-residential uses with a dedicated ground floor entrance      |
| 8                     | <b>Recessed Entry Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 9                     | <b>Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                            |
| 10                    | <b>Temporary Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                  |
| 11                    | <b>Temporary Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 12                    | <b>Monument Sign</b><br>Any building with continuous linear street frontage of 200 feet or greater           |
| 13                    | <b>Directional Sign</b><br>Each vehicle entrance                                                             |
| 14                    | <b>Accessory Sign</b><br>Identified specific uses                                                            |

## **D. Sign Type Standards and Guidelines**

This section provides Standards and Guidelines for each Sign Type.

### **1. Grand Wall Sign**

Grand Wall Signs are large signs located on, and parallel to, large unfenestrated building wall areas.

#### **a. Standards**

- i. A Grand Wall Sign shall only be located on unfenestrated wall areas of 2,000 square feet in size or greater.
- ii. Only one (1) Grand Wall Sign shall be permitted per establishment.
- iii. The Grand Wall Sign area shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. A Grand Wall Sign shall not exceed 1,000 square feet or 25 percent of the total wall area, whichever is less.
- v. Grand Wall Signs shall project no more than one (1) foot from the façade of the building.

#### **b. Commercial Guidelines**

- i. Materials used in Grand Wall Signs shall be wood, ceramic, metal, or paint only.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

#### **c. Industrial Guidelines**

- i. Materials used in Grand Wall Signs shall be ceramic or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

### **2. Wall Sign**

Wall Signs are signs that are located on, and parallel to, a building wall. Business Identification Wall Signs are signs that announce the name of a business within a building and Building Identification Wall Signs are signs that announce the name of a building. Both are located on, and parallel to, a building wall.

1) Grand Wall Sign.

a. Standards

- i. Wall Signs shall be located below the second floor and within the middle 50 percent of the building or tenant frontage measured from lease line to lease line. Building Identification Wall Signs shall be located only on the frieze or fascia (articulated banding across the top of every building floor) area of storefront level; frieze, fascia, parapet of the uppermost floor; or above the entrance to main building lobby.
- ii. No Wall Sign shall exceed 150 square feet in size. Building Identification Wall Signs shall be no taller than 24 inches in height.
- iii. Wall Signs shall count towards the total sign area permitted based on the Linear Frontage Ratio, except that the area of Building Identification Wall Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. Wall Signs shall project no more than one (1) foot from the façade of the building.

2) Building Identification Wall Sign.

b. Commercial Guidelines

- i. Materials used in wall signs shall be wood, ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. New wall signs for individual businesses in a shopping center shall be placed consistent with the location of signs for other businesses in the center. This will establish visual continuity among storefronts and create a unified appearance for the center.
- v. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

2) Business Identification Wall Sign.

c. Industrial Guidelines

- i. Materials used in wall signs should be ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs should be inscribed into the façade or constructed of individual metal letters.
- ii. Wall signs shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only. Building Identification Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

3. **Projecting Sign**

Projecting Signs are signs that are oriented perpendicularly to the building façade and are either (1) suspended under a bracket, armature, or other mounting device or (2) are cantilevered (i.e., structurally affixed to the building).

a. Standards

- i. Projecting Signs shall only be mounted on the wall area below the second floor.
- ii. No Projecting Sign shall exceed 16 square feet in size.
- iii. Projecting Signs shall project no more than four feet from the façade of the building.
- iv. No portion of a Projecting Sign shall be lower than eight feet above the level of the walkway over which it projects.

b. Commercial and Industrial Guidelines

- i. Projecting Signs that are suspended under a bracket, armature, or other mounting device shall be wood or metal and shall be illuminated by external illumination only.

3) Suspended Projecting Sign.

3) Cantilevered Projecting.

- ii. Projecting Signs that are cantilevered signs shall be wood, ceramic, metal, and paint only and shall be illuminated by external illumination or halo illumination only.
- iii. Sign supports and brackets shall be compatible with the design and scale of the sign and the architectural design of the building.

#### 4. ***Awning Valance Sign***

Awning Valance Signs are signs applied to the awning valance and are contained completely within the valance.

- a. Standards
  - i. Lettering for Awning Valance Signs shall include one (1) line of lettering not to exceed two-thirds (2/3) the height of the valance or 12 inches, whichever is less.
  - ii. Awning Valance Signs shall project no farther from the building than its associated awning.
  - iii. No portion of an Awning Valance Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial and Industrial Guidelines
  - i. Awning Valance Signs shall consist of metal, or vinyl or paint applied directly to the awning.
  - ii. Awning Valance Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

4) Awning Valance Sign.

#### 5. ***Awning Side Sign***

Awning Side Signs are signs applied to the side panel of an awning.

- a. Standards
  - i. The area of Awning Side Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - ii. Lettering for Awning Side Signs shall not exceed 12 inches in height with total sign area not to exceed 20 percent of the area of the awning side area.
  - iii. Awning Side Signs shall project no farther from the building than its associated awning.
  - iv. No portion of an Awning Side Sign shall be less than eight feet above the level of the walkway over which it projects.

5) Awning Side Sign.

- b. Commercial and Industrial Guidelines
  - i. Awning Side Signs shall consist of vinyl or paint applied directly to the awning.
  - ii. Awning Side Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

## 6. Canopy Fascia Sign

Canopy Fascia Signs are signs that are mounted to the front or side fascia of a canopy and contained completely within that fascia.

- a. Standards
  - i. The height of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) the height of the fascia or 12 inches, whichever is less.
  - ii. The width of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) of the canopy width.
  - iii. Canopy Fascia Signs shall project no farther from the building than its associated canopy.
  - iv. No portion of a Canopy Fascia Sign shall be less than eight feet above the level of the walkway over which it projects.
  - v. Canopy Fascia Signs shall consist of only one (1) line of lettering articulated as individual letters mounted directly to the canopy.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Canopy Fascia Signs shall be metal and paint only.
  - ii. Canopy Fascia Signs shall be illuminated by external illumination only.

6) Canopy Fascia Sign.

7) Under-Awning Sign.

## 7. Under-Awning or Under-Canopy Sign

Under-Awning or Under-Canopy Signs are signs that are suspended under an awning or canopy, perpendicular to the building facade.

- a. Standards
  - i. Under-Awning or Under-Canopy Signs shall be located adjacent to a public entrance.
  - ii. No more than one (1) Under-Awning or Under-Canopy Sign shall be permitted per establishment per façade.
  - iii. The area of Under-Awning or Under-Canopy Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - iv. Under-Awning or Under-Canopy Signs shall not exceed three (3) square feet in area.

7) Under-Canopy Sign.

- v. Under-Awning or Under-Canopy Signs shall project no farther from the building than its associated awning or canopy.
  - vi. No portion of an Under-Awning or Under-Canopy Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial Guidelines
- i. Materials used in Under-Awning or Under-Canopy Signs shall be wood, metal, and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
- i. Materials used in Under-Awning or Under-Canopy Signs shall be metal and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.

**8. Recessed Entry Sign**

Recessed Entry Signs are signs that are oriented parallel to the building façade and that are suspended over a recessed entry.

- a. Standards
- i. No Recessed Entry Sign shall exceed twenty (20) square feet in size.
  - ii. Recessed Entry Signs shall not project beyond the façade of the building.
  - iii. No portion of a Recessed Entry Sign shall be lower than eight feet above the level of the walkway.
- b. Commercial Guidelines
- i. Materials used in Recessed Entry Signs shall be wood, metal, and paint only.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.

8) Recessed Entry Sign-  
Section View.

8) Recessed Entry Sign-  
Elevation View.

c. Industrial Guidelines

- i. Materials used in Recessed Entry Signs shall be metal and paint only.
- ii. Recessed Entry Signs shall be illuminated by external illumination only.

**9. Window Sign**

Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window.

a. Standards

- i. Window Signs shall be permitted on windows below the second floor level only. A Window Sign that only identifies a building shall be located on a transom window above a primary entrance, or the glazed area of primary door.
- ii. Window signs shall count towards total sign area permitted based on the Linear Frontage Ratio, except that the area of a Window Sign that only identifies a building shall not count towards the total sign area permitted based on the Linear Frontage Ratio. One (1) Window Sign that only identifies a building shall be permitted per building per street-facing façade.
- iii. No more than 25 percent of any individual window area shall be covered or otherwise occupied by signage.
- iv. The letter height of each Window Sign shall not exceed 12 inches and shall be taller than four inches.

b. Commercial and Industrial Guidelines

- i. Ground-floor Window Signs shall consist of vinyl or paint applied to the glass, neon mounted or suspended behind the glass, or framed and mounted paper signs. Window Signs that only identify a building shall consist of vinyl or paint applied to the glass only.
- ii. Ground floor Window Signs shall not be illuminated.

**10. Temporary Window Sign**

Temporary Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window and are designed, constructed, and intended for display on private property for a period of not more than 90 consecutive days per year. Examples include "grand opening", "special sale," and seasonal signage.

a. Standards

9) Window Sign – Business Identification.

9) Window Sign – Building Identification.

- i. Temporary Window Signs shall be located only on ground floor windows on building facades that face a public street or a parking lot.
  - ii. Temporary Window Signs shall not exceed six square feet in size.
  - iii. Temporary Window Signs shall not cause the total amount of the window area covered with signage to exceed 25 percent.
  - iv. Temporary Window Signs that satisfy the above standards and General Standards do not require a permit.
- b. Commercial and Industrial Guidelines
- i. Temporary Window Signs shall be constructed of paint applied directly to the glass or framed paper signs placed behind the glass.
  - ii. Temporary Window Signs shall not be illuminated.
  - iii. Temporary Window Signs that satisfy the above guidelines and General Guidelines do not require a permit.

10) Temporary Window Sign.

**11. Temporary Wall Sign**

Temporary Wall Signs are signs that are located on, and parallel to, a building wall and are designed, constructed, and intended for display on private property for a period of not more than ninety (90) consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal temporary banner signage.

- a. Standards
- i. Temporary Wall Signs shall only be mounted on a wall area below the second floor level that faces a public street or a parking lot.
  - ii. A maximum of one (1) Temporary Wall Sign is allowed per establishment.
  - iii. No Temporary Wall Signs shall exceed 32 square feet in area.
  - iv. Temporary Wall Signs shall project no more than one (1) foot from the façade of the building.

11) Temporary Wall Sign.

- b. Commercial and Industrial Guidelines
  - i. Materials used in Temporary Wall Signs shall consist of a flexible vinyl material with grommet holes installed around the edges to accommodate attachment to a building.
  - ii. Temporary Wall Signs shall not be illuminated.

## 12. Monument Sign

A Monument Sign is a freestanding sign supported by a solid architectural element at its base.

- a. Standards
  - i. A maximum of one Monument Sign is allowed per street frontage for single-purpose buildings, multi-tenant buildings or complexes and shopping centers on a -parcel with one or more street frontages of at least 100 feet.
  - ii. A Monument Sign shall not exceed eight feet in length or six feet in height.
  - iii. Monument Signs shall be placed perpendicular or parallel to the street. The base of a Monument Sign shall be set back a minimum of five feet from any public right-of-way or interior property line; a minimum of 10 feet from the edge of a driveway; and a minimum of 50 feet and from any Monument Signs or Pylon Signs on adjoining sites. Monument Signs shall not block sight lines at entry driveways and circulation aisles.
  - iv. The sign copy for a Monument Sign shall only identify the name of the center, complex, or building and the address; however, the name of the primary tenant, if any, may be included in the copy. The minimum letter size allowed shall be six inches. Sign copy shall not be located closer than one half-letter height to the sign edge or other line of copy. Between 5 to 10 percent of the sign area should be dedicated to identification of the street address.
  - v. The area of Monument Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - vi. Monument Signs shall not project over any on-site driveway or vehicle circulation area.
  - vii. Landscaping with automatic irrigation shall be provided at the base of the supporting structure equal to twice the area of one face of the sign or 75 square feet, whichever is greater. For example, 40 sq. ft. of sign area = 80 sq. ft. of landscaped area.

12) Monument Sign.

- b. Commercial and Industrial Guidelines
- i. Monument Signs may be illuminated, however the sign copy should be the only portion of the sign face that is illuminated. The sign background or field shall be opaque with a nonglossy, nonreflective finish.
  - ii. The sign area and height of the sign shall be in proportion to the site and surrounding buildings. Signs shall not be overly large so as to be a dominant feature of the site.
  - iii. Monument Signs shall incorporate architectural elements, details, and articulation as follows:
    - Provide a solid architectural base that supports the sign. The base shall be a minimum of one-foot in height.
    - Provide architectural elements on the sides and top to frame the sign pane(s). Use columns, pilasters, cornices, and similar details to provide design interest.
    - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
    - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with its adjacent building(s).

**13. Directional Sign**

A Directional Sign is an on-premise sign giving directions, instructions, or facility information of an establishment (e.g., parking signs, exit and entrance signs, etc.).

- a. Standards
- i. One (1) directional sign for each vehicle entry to a site with a maximum area of three square feet per sign. Maximum sign height shall be four feet. Additional directional signs may be allowed with approval of a Comprehensive Sign Program.

13) Directional Sign.

- b. Commercial and Industrial Guidelines
  - i. Directional signs and their supports shall use the same color palette of the proposed building.
  - ii. Directional signs shall be located to maintain sight lines along major circulation routes and shall be illuminated for visual clarity and safety.
  - iii. Directional signs shall be designed with easy-to-read fonts, contrasting colors from the surrounding support panels, and durable materials.
  - iv. Double-sided parking directional signs shall incorporate messaging and direction arrows on both sides of sign.
  - v. Parking directional signage shall be used consistently throughout each individual development.

#### 14. Accessory Signs

Accessory Signs are signs that provide incidental information about a project site or a business and its goods or services. For the purposes of this plan, Accessory Signs include:

- Directory Sign. A sign listing the tenants or occupants of a building or building complex.
- Nameplate Sign. A sign indicating the name and/or address of a building or occupant.
- Restaurant Menu Sign. Menus displayed on the exterior premises of a restaurant.

14) Accessory Sign.

- a. Standards
  - i. The area of Accessory Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - ii. Directory Signs: Limited to a total sign area of 10 square feet.
  - iii. Nameplate Sign: One non-illuminated sign not to exceed one square foot in area.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Accessory Signs shall be wood and metal.
  - ii. Accessory Signs shall be illuminated by internal or external illumination as appropriate.

## **10.8 Public Right-of-Way Streetscape**

This section establishes standards for streetscape landscaping improvements within the public rights-of-way along the major highways, primary highways, and secondary highways as identified in the General Plan, Circulation Master Plan, as well as district gateway/intersection enhancements. The intent of these streetscape improvement concepts and gateway enhancements is to provide a “sense of place” or identity, while interweaving the standards and tree palettes that may be provided by any overriding City Master Street Tree Plan.

### **A. Street Classifications**

Streets within the SED are classified as follows:

1. Major highways:
  - a. Six-lane major highway – none within SED.
  - b. Modified six-lane residential adjacent major highway – none within SED.
  - c. Modified six-lane no median major highways – none within SED.
  - d. Eight-lane major highways – none within SED.
2. Primary highways – Beech Avenue and Slover Avenue.
3. Secondary highways – Citrus Avenue, Poplar Avenue, and Santa Ana Avenue.
4. Collector streets – Catawba Avenue and Elm Avenue.

### **B. General Design Criteria**

1. Landscaping should be used to accentuate and frame important view corridors.
2. Landscaping shall employ a common three-tiered approach to design:
  - a. Trees
  - b. Shrubs, vines and tall grass-like materials
  - c. Groundcovers (does not include turf)
3. Landscaping should be consistent and accentuated along arterial corridors and gateway intersections to emphasize district areas.

4. Street trees on major highways and primary highways shall consist of on-center planting of deciduous trees in medians (whenever medians are required) and evergreen trees in parkways to provide seasonal variations of views during fall and winter months (clearer air and snow-capped peaks).
5. Secondary highways shall provide single species of evergreen trees planted in parkways.
6. Gateway intersection enhancements should incorporate the adjacent property tree species (used in buffer setback) in order to provide background and screening, and be enhanced with accent trees selected for their character and shape.
7. Primary and secondary gateways will include thematic monumentation for district identification and reflect elements of local identity (i.e. river rock, concrete, City logo, etc.).
8. All gateway intersection enhancements shall incorporate decorative paving at corner areas and plant materials that promote the best of water-efficient landscaping.

### ***C. Streetscape Concept***

The Streetscape Concept Plan for the entire Specific Plan area is shown on Exhibit 10-5. The plan identifies major, primary, and secondary highways, as well as collector streets and the gateway intersections within the Specific Plan area. Roadway classifications are consistent with the General Plan, Circulation Master Plan.

1. **Primary/Secondary Streetscape.** Primary/Secondary highway streetscapes define the areas within the Specific Plan and its districts, and connect to the major thoroughfares throughout the City. Primary highways within the SED include Beech Avenue and Slover Avenue. Secondary highways within the SED include Citrus Avenue, Poplar Avenue, and Santa Ana Avenue. Streetscape cross-sections for these areas are shown in Exhibits 10-6 and 10-7.

# Southwest Industrial Park Specific Plan

Slover East Industrial District

Exhibit 10-5 – Streetscape Concept Plan

Exhibit 10-6 – Primary Highway – 4 Lanes – Cross Section D-D (Beech Avenue and Slover Avenue)

10-52

**D. Gateways****A. Concept Plan**

The Streetscape Concept Plan Exhibit 10-5 identifies a hierarchy of primary, secondary, and tertiary gateways. The intent of the gateway intersection enhancements is to provide a visual statement that you are within the Specific Plan area.

The gateway intersection enhancements should all incorporate uniform treatments (to varying degrees) within expanded corner setback areas (45 degree diagonal Right-of-Way). Depending on the hierarchy level, each gateway shall include special corner/sidewalk paving, planting schemes that highlight drought tolerant species, and monumentation signage. Monument signs are optional on tertiary gateway intersections.

Each corner planting scheme shall incorporate the three-tiered planting concept, consisting of accent trees, shrubs, or tall grass-like plant material, and a ground cover. Dense planting of evergreen tree species consistent with adjacent buffer setback plantings shall provide a background/screen for each corner setback area.

Gateway conceptual designs with typical dimensions (plan views) are illustrated in Exhibits 10-8 and 10-9. The monument sign concept as it would appear in front of the planting treatment is illustrated in Exhibit 10-10.

Gateway enhancements and monument sign enhancements shall meet the City's line of sight regulations, as determined by the City Engineer. Dimensions of monument signs shall comply with Section 10.7.D.12.

**B. Dedication and Maintenance of Gateway Intersection Enhancements**

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for gateway intersection enhancements in Section 6.8.B Public Right-of-Way Streetscape- Gateways, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standard indicated in Section 6.8., Public Right-of-Way Streetscape; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.
  - c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure

the installation and perpetual maintenance of the gateway intersection enhancements.

Exhibit 10-8 – Secondary Gateway Intersection Enhancement Concept

## Southwest Industrial Park Specific Plan

Slover East Industrial District

Exhibit 10-9 – Tertiary Gateway Intersection Enhancement Concept

Exhibit 10-10 – Monument Sign Concept

4. Street Furniture. Exhibit 10-11 – Street Furniture Palette identifies recommended street furniture components, including lighting, trash receptacles, and benches, for the district. The palette is intended to ensure a unified visual identity for the district, which is distinct from the other districts within the Specific Plan area.

Exhibit 10-11 – Street Furniture Palette.

## **10.9 Design Guidelines**

### **A. Design Objectives**

The Design Guidelines will promote and reinforce the City's commitment to high quality development. In general, the guidelines are intended to ensure that development preserves or improves the positive characteristics of the City's image. The objectives of these guidelines are to:

- Promote orderly development by implementing the SWIP Specific Plan objectives, policies, and principles found in Chapter 2 Policy Framework.
- Protect and enhance property values by ensuring that development fits properly within the context of its surroundings and does not negatively impact adjacent uses.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian and motor vehicle circulation within a project and convenient pedestrian linkages to and from adjacent residential, commercial, industrial, and school areas.

### **B. Design Intent**

The design intent of the SED is to provide for well-planned and well-designed industrial development. Innovative site design and architecture which supports the functional needs of the uses is highly encouraged.

### **C. Industrial, Distribution, and Business Park Uses**

The design guidelines in this Subsection shall apply to all industrial, distribution, and business park development within this land use district.

### 1. Site Design

#### Site Layout

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street.
  - Parking in front of building with a landscape buffer between parking and street. **See Figure 1.**

Figure 1. Appropriate building and landscape placement adjacent to public street.

- Visitor parking maybe located at the front of the building adjacent to the main entry while employee parking and service areas are located at the sides and rear of the building. **See Figure 2.**

Figure 2. Parking layout.

- Service and loading should not be located on building side(s) adjacent to a public street.
- When buildings abut residential properties, parking and loading areas shall be located at the side of the building instead of the rear. The rear setback area shall be fully landscaped. **See Figure 3.**
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal is prohibited.
- Noise generating activities and storage areas shall be located as far as possible from adjacent properties, especially residential zones. Sound attenuation walls shall be used where appropriate to reduce noise.
- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. **See Figure 4.**

Figure 3. Fully landscaped setback adjacent to residential.

Figure 4. Appropriate location of loading areas.

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.).

- Business park developments should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

### 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets. **See Figure 5.**
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest. **See Figure 6.**
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between sensitive uses (i.e. residential, parks, etc.) and outdoor work areas, loading and storage.

### 3. Site Elements

#### Fences and Walls

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way. **See Figure 7.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.

Figure 5. Buildings are oriented to create gateway into development.

Figure 6. Buildings are oriented to provide architectural features visible from the public right-of-way.

Figure 7. Tubular steel and stone pillars are appropriate fencing materials.

- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall.
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti. **See Figure 8.**

Figure 8. Wall is articulated with pillars and incorporates landscaping at the base and vines to deter graffiti.

### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 9.**
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from public view. **See Figure 10.**

Figure 9. Appropriate placement, orientation and screening of service areas.

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 11.**

Figure 10. Screening of roof mounted equipment.

- Trash enclosures shall integrate horizontal screening such as trellises. **See Figure 11.**

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and adjacent to residential zones, and to prevent light spill over onto adjacent properties. **See Figure 12.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 13.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building. **See Figure 14.**
- Truck and truck trailer storage areas shall incorporate lighting to increase real and perceived security.

Figure 11. Trash enclosures with architectural screening elements.

Figure 12. Hooded light fixture directs light downward.

Figure 13. Bollard lighting along pedestrian walkway.

Figure 14. Decorative light fixtures.

#### 4. Parking and Access

##### Parking

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts. **See Figure 15.**
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 15.**

Figure 15. Parking lot landscaping.

- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 16.**

Figure 16. Pedestrian circulation is consistent along perimeter of parking lot.

- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality storm water facilities consistent with City standards. **See Figure 17.**

Figure 17. On-site stormwater capture system.

### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts. **See Figure 18.**

Figure 18. Shared parking access.

- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 19.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

Enhance project entries with landscaping and special paving for visual impact.

Figure 19. Entry drive.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses.
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 20.**

Figure 20. Incorporation of vertical offsets and material changes.

Figure 21. Façade articulation.

### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest. **See Figure 21.**
- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 22.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 23.**
- The orientation of windows in buildings adjacent to residential zones shall preclude a direct line of sight into residential properties.
- Primary building entries shall be easily identified through the use of prominent

Figure 22. Use of cornices, window trim and grooves.

Figure 23. Enhanced corner elements.

architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a building's entry. **See Figure 24.**

Figure 24. Articulated Entries.

- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 25.**
- Locate and/or screen rooftop equipment so that it is not visible from the street. Rooftop screening shall be integral to the building's form.

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.

Figure 25. Offset roof planes.

- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color. **See Figure 26.**
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.
- Use of metal as the primary building façade material is subject to approval of a conditional use permit by the Planning Commission.

Figure 26. Use of expansion joints.

## 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) ground cover and flowering plants;
  - 2) shrubs and vines; and
  - 3) trees.

**See Figure 27.** See Recommended Plant Palette in Section 10.5.

Figure 27. Three-tiered planting system: trees, shrubs, and ground covers.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. Incorporation of public art is highly encouraged.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection .

- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls. Water features and public art are also encouraged. **See Figure 28.**
- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 29.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction. **See Figure 30.**

Figure 28. Plaza area.

Figure 29. Wall incorporates landscaping to soften appearance and deter graffiti.

Figure 30. Plant material along buffer wall.

- Landscaping and trellises with vines are encouraged be used for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to residential zones shall include dense landscaping to provide visual screening and noise abatement.
- Landscaped berms along site edges may be used to screen parking, loading and

Wall, landscaping and berms screen industrial buildings and storage

Figure 31. Landscaped berms.

service areas and to serve as a sound reduction measure. **See Figure 31.**

- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area. **See Figure 32.**
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/storm water treatment features and bio-swales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 33.**
- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection.

Figure 32. Landscaped parking lot.

Figure 33. On-site water filtration.

Ground cover shall achieve 100% coverage in one year.

- Informal tree masses should be planted in a mix of sizes.

### **D. Commercial Uses**

#### **1. Site Design**

##### **Site Layout**

- The arrangement of multiple buildings and associated circulation and parking shall reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas that enhance publicly-accessible spaces. **See Figure 34.**
- Loading areas, access and circulation driveways, trash enclosures, storage areas, and rooftop equipment shall be located as far as possible from adjacent residences.
- Buildings may be located adjacent to the street with a fully landscaped setback or buildings may be set back with limited parking in front. **See Figure 35.**

Figure 34. Site plan emphasizes pedestrian connectivity.

Figure 35. Limited parking adjacent to street with landscape setback.

## Courtyards and Plazas

- The organization and design of buildings shall encourage and facilitate pedestrian activity.
- Buildings should be organized to create usable open space, courtyards, plazas and dining areas. **See Figure 36.**
- Pedestrian-oriented open spaces, courtyards and plazas shall include a focal element such as a sculpture and/or water feature and sitting areas. **See Figure 37.**

### 2. Building Orientation

- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Commercial buildings on corner parcels shall establish a strong tie to both streets and should encourage pedestrian activity at corner locations. **See Figure 38.**
- Buildings associated with service retail and restaurant uses shall be pedestrian-scaled, with entries fronting onto streets, plazas or courtyards to reinforce pedestrian orientation.
- Commercial development shall be oriented away from residential streets. At corner locations, if the side street primarily serves a residential neighborhood, development and access shall be oriented away from the side street.

Figure 36. Buildings create courtyard.

Figure 37. Open plaza areas with seating.

Figure 38. Commercial/retail buildings on corners should establish strong tie to the street.

- Buildings adjacent to sensitive uses shall be buffered. This may be accomplished by providing masonry walls, landscaped berms, appropriate building orientation, building height setbacks and limitations on activities adjacent to sensitive uses. **See Figure 39.**

Figure 39. Masonry wall and landscaping separates uses.

- To protect residential privacy and reduce the visual mass of commercial buildings adjoining a residential zone, the commercial building shall be set back and oriented away from the residential zone.
- Commercial and retail buildings should generally be placed at or near setback lines with developments oriented in a manner that will provide visual interest.
- Buildings should be oriented in a manner that takes advantage of passive solar design to the maximum extent feasible.

### 3. Site Elements

#### Fences and Walls

- Wall heights and surfaces shall be articulated with varying façade depths or pilasters to promote architectural interest, and may include a cap along the top of the wall. **See Figure 40.**
- Walls visible from public streets shall be decorative and complement the design of on-site buildings.
- Wall and fencing materials may consist of brick, stone, stucco, wrought iron or tubular steel. Wall and fencing colors should match building colors, with neutral earth tones. **See Figure 41.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

Figure 40. Wall incorporates pilasters and cap.

Figure 41. Stone wall.

#### Screening

- Service and delivery areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 42.**
- Outdoor mechanical equipment should be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. **See Figure 43.**

Figure 42. Screened delivery area.

Figure 43. Screening of roof-mounted equipment.

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site.
- Trash enclosures visible from the public view shall integrate horizontal screening such as trellises.

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and adjacent to residential zones, and to prevent light spillover into adjacent properties. **See Figure 44.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 45.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures. **See Figure 46.**

Figure 44. Hooded light fixture directs light downward.

Figure 45. Bollard lighting along pedestrian walkway.

Figure 46. Pole mounted light.

- Decorative light fixtures are encouraged, as long as fixtures are consistent with the architectural design of the building. **See Figure 47.**

#### 4. Parking and Access

##### Parking

- Parking lots should be designed with a clear hierarchy of circulation: major access drives with no direct access to parking spaces; major circulation drives with little or no parking; and parking aisles for direct access to parking.
- Large commercial and retail parking areas should be located behind building facades so as not to be visible from major streets.
- Parking lots shall not be the dominant visual element on the site.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 48.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat gain and the visual impacts of large parking areas.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 49.**
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 50.**

Figure 47. Decorative light fixtures.

Figure 48. Landscaped parking lot.

Figure 49. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 50. On-site storm water capture.

## Access - Vehicular

- Site access shall promote safety by providing an adequate stacking distance for vehicles between the back of the sidewalk and the first parking stall or circulation aisle.
- Conflict between vehicles and pedestrians shall be avoided at access driveways by providing a walkway on at least one side of the driveway.
- The number of access driveways shall be minimized and located as far as possible from street intersections.
- Site access locations shall be coordinated with existing or planned median openings and driveways on the opposite side of the roadway.
- Unobstructed line of sight at corners and driveways shall be provided to reduce vehicular conflicts. **See Figure 51.**
- Avoid placing primary vehicle access in close proximity to major building entrances in order to minimize pedestrian and vehicular conflicts. **See Figure 52.**

Figure 51. Unobstructed sight lines.

Figure 52. Vehicle access is placed away from building entrances.

## Access - Pedestrian

- Clearly defined pedestrian walkways or paths should be provided from parking areas to primary building entrances. Clear and convenient pedestrian access shall be provided between the public sidewalk and the pedestrian areas of the development. **See Figure 53.**

Figure 53. Clearly defined pedestrian walkways.

- Raised walkways, decorative paving, landscaping and/or bollards shall be used to separate pedestrian paths from vehicular circulation areas. **See Figure 54.**
- Parking areas should be designed so that pedestrians walk parallel to moving cars. **See Figure 55.**

### Loading and Delivery

Loading and delivery service areas shall be located and designed to minimize their visibility, circulation conflicts, and adverse noise impacts to the maximum extent feasible.

- Loading and delivery service areas shall be screened with portions of the building, architectural wing walls, freestanding walls or landscape planting.
- When commercial buildings abut a residential zone, loading areas shall not be visible from adjacent residentially-zoned properties.
- Loading areas shall be designed to not interfere with circulation or parking, and to permit trucks to fully maneuver on the property without backing from or onto a public street. **See Figure 56.**
- Service, loading and delivery areas should take access from planned shared access points to reduce curb cuts along project frontages.

## 5. Architecture

### Mass and Scale

- The mass and scale of new infill developments shall be compatible with the existing, adjacent structures. This can be accomplished by transitioning from the height of adjacent buildings to the tallest elements of the new development by stepping back the upper portions of taller buildings.

Figure 54. Raised walkway and landscaping in parking lot.

Appropriate

Inappropriate

Figure 55. Pedestrian circulation.

Figure 56. Loading area placed behind building outside of circulation lanes.

- Human-scale elements, such as pedestrian-scaled doors, windows and building modules shall be used to emphasize pedestrian orientation.
- The size and location of various building elements (e.g., roofs, parapet walls, wing walls, etc.) shall be in scale to the building as a whole and provide visual interest. **See Figure 57.**

### Building Facades

- Buildings shall include enhanced and articulated facades along public streets.
- Design details shall be continued or repeated upon all building elevations.
- Building entrances should be readily identifiable. The use of recesses, projections, columns, and other design elements to articulate entrances are encouraged. **See Figure 58.**
- Facades shall provide visual interest with vertical and horizontal variations in wall and roof planes, building projections, door and window bays, arcades, and similar elements/techniques. **See Figure 59.**
- Buildings shall undergo a break in façade approximately every 40 feet, to create a varied wall surface along public areas. Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale should be considered for the remainder of the building spanning public right-of-way frontage.
- Buildings should include vertical elements (e.g., clock tower, building articulation) that create points of visual interest when viewed from the public right-of-way.

Figure 57. Building elements add visual interest.

Figure 58. Building Entry.

Figure 59. Horizontal and vertical articulation.

- Roof designs that are visually interesting and designed to completely screen all rooftop equipment from public streets are required. **See Figure 60.**
- The location of windows in commercial buildings adjacent to residential zones shall preclude a direct line of sight into residential properties.
- Buildings should use large windows along walls and skylights in rooftop designs to capture natural light during operating hours.
- The interior areas of commercial development should have shaded or covered walkways.

#### Storefronts

- Storefronts shall be comprised predominantly of transparent surfaces (windows). **See Figure 61.**
- The use of clear glass on the first floor is strongly encouraged.
- Storefront windows shall be large and a minimum of 24 inches off the ground. The maximum bulkhead (wall plane between the ground and the bottom of the windows) height should be approximately 36 inches.
- Storefront entries should promote a sense of entry into the structure as well as provide a sense of shelter by incorporating elements such as overhangs, canopies, awnings, and recesses. **See Figure 62.**
- If security grilles are necessary, they shall be placed inside the building behind the window display area at a minimum distance of two feet behind the window.
- Product storage racks shall not block views through storefront windows.

Figure 60. Full roof screens all equipment and provides visual interest.

Figure 61. Storefront windows.

Figure 62. Storefront overhangs provide a sense of shelter and entry.

## Colors and Materials

- The use of a coordinated three-color palette for the base color and major and minor trim accents is encouraged.
- Colors for all structures on-site should be varied and should consist of neutral, earth tones. **See Figure 63.**
- Exterior finish materials shall be appropriate for the architectural style and/or theme of the entire development and should contribute towards a high quality image. **See Figure 64.**
- Changes in materials shall occur at inside corners to make building volumes appear substantial.
- Materials shall be varied to provide architectural interest, however, the number of materials shall be limited and not exceed what is required for contrast and accent of architectural features.
- Exterior materials and architectural details shall relate to each other in ways that are traditional and logical. For example, heavy materials should appear to support lighter ones. **See Figure 65.**

## 6. Landscaping

### Plants and Irrigation

- Landscaping should help complete the design of the site and enhance the quality of commercial developments by framing and softening the appearance of buildings, screening undesirable views, and buffering incompatible uses.

Figure 63. Use of neutral, earth tones.

Figure 64. Exterior finish materials.

Figure 65. Heavy materials at base of building with lighter materials above.

- Landscaped areas should generally incorporate planting utilizing a three tiered system:
  - 1) ground covers (including flowering plants—annuals and perennials),
  - 2) shrubs and vines, and
  - 3) trees.

**See Figure 66.**

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. **See Figure 67.**
- Planting materials shall be used in plazas or gathering areas to provide shade and soften the appearance of hard surfaces. Water features and public art are also encouraged in these places. **See Figure 68.**
- Trees located along street frontages shall be selected to match or complement existing or proposed street trees in the public right-of-way.
- A minimum five-foot landscape strip shall be used along circulation aisles in parking lots, and along building side/rear elevations if a walkway is not used. A landscape strip is also encouraged in nonpublic areas and service areas between pavement and buildings.
- On-site water filtration features and bio-swales are strongly encouraged, and can also be used as buffering methods for adjacent businesses.
- Drought tolerant and low-water trees, vines, and groundcovers shall be used on-site. When feasible, drip irrigation systems shall be installed to provide on-site vegetation with appropriate irrigation and ensure the highest possible volume of water conservation.
- Planting materials shall be used to provide a buffer against noise, and may be

Figure 66. Example of three tier landscape system.

Figure 67. Highlighting entry points.

Figure 68. Public plaza area within commercial development incorporates water feature.

integrated with walls or fences to achieve desired sound reduction and appearance.

- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### Site Furniture

- Outdoor furniture and fixtures (e.g., lighting, directional signs, trellises, raised planters, works of art, benches, trash receptacles, fencing, etc.) shall be integral elements of the building and landscape design. **See Figure 69.**
- Outdoor furniture shall be of a sturdy construction to withstand daily use. Wood should be avoided.
- Outdoor furniture shall be located so it will not conflict with the pedestrian and motor vehicle circulation patterns. **See Figure 70.**
- Outdoor seating should be shaded.

Figure 69. Trellis.

Figure 70. Outdoor furniture outside of pedestrian walkway.

## Paving

- Decorative paving shall be incorporated into courtyards, plazas, pedestrian walkways, and crosswalks. **See Figure 71.**
- Paving materials shall complement the architectural design of the building and landscape design of the project. The use of stamped concrete, stone, brick, permeable pavers, exposed aggregate, or colored concrete is encouraged. The use of slippery materials (e.g., polished marble or granite) is prohibited.
- Areas with decorative paving should be sized consistent with the function of the area. At driveway entries, the minimum depth from the back of the sidewalk should be eight feet; however, larger areas may be required.

Figure 71. Enhanced paving in pedestrian areas.

## e. Special Commercial Uses

### 1. Drive-Through Businesses Site Design

- The predominant feature along the street frontage shall be the building, not parking lots or the drive-through aisle.
- The building shall be located to maximize the distance for vehicle queuing while screening the drive-through operations. **See Figure 72.**
- When adjacent to residential zones, outdoor order kiosks, loading/unloading areas, and storage areas shall be located as far as possible from residential properties.

Figure 72. Vehicle queuing.

- Drive-through aisles shall be located in the rear of the building away from the street frontage whenever possible. If the drive-through aisle is located between the building and the street, dense landscaping and landscaped berms or a screen wall (42 inches high or less) shall be provided to screen the drive-through aisle from street view. **See Figure 73.**

### Building Design

- All building elevations shall receive the same level of architectural detailing.
- Buildings shall incorporate roof designs with built-in equipment wells or other built-in screening methods, so that screening devices do not appear added-on.
- If the drive-through facility is a pad building within a shopping center, the architecture shall relate to and be compatible with the design of the center. The only feature that identifies the franchise shall be the company's logo and signs.

## 2. Mini-Storage Facilities

### Site Design

- Offices and customer service areas shall be located adjacent to the street frontage to provide convenient access and help visually break up the front façade.

### Building Design

- Long, flat, unarticulated walls shall be avoided along street frontages. **See Figure 74.**
- Building walls and screen walls shall incorporate substantial articulation, and changes in plane and height to add visual interest.

Figure 73. Example of appropriately landscaped and screened drive-through aisle.

Figure 74. Articulated wall of mini-storage facility.

- A minimum of two different building materials shall be used on building walls and screen walls adjacent to street frontages (e.g., stucco, brick, stone).
- Building materials, textures and landscaping shall be chosen to deter graffiti.

### 3. Parking Garages

#### Site Design

- A minimum 5-foot wide landscaped strip shall be provided on all sides of the parking structure except where ground floor retail space is provided.

#### Building Design

- Parking garages shall be designed to help reduce the mass and scale of the garage and to ensure their compatibility with surrounding uses.
- Conceal view of vehicles in the garage through a combination of screen walls and plantings. **See Figure 75.**
- Avoid a monolithic appearance. This can be accomplished as follows:
  - Minimize horizontal and vertical banding by balancing both horizontal and vertical elements.
  - Use simple, clean geometric forms, and coordinated massing.
  - Step back upper levels of the garage 5 to 10 feet above the first floor. **See Figure 76.**

Figure 75. Parking structure with landscaping.

Figure 76. Horizontal and vertical articulation breaks up parking structure elevation.

- Coordinate openings in the parking garage with the size and modulation of adjacent windows, structural bays, and storefronts if the parking garage contains other uses.
- Size openings in the parking garage to resemble large windows as in an office building.
- Use masonry materials that are predominantly light in color, but avoid unpainted concrete.
- Avoid a sloping ramp appearance by providing level and uniform wall planes between floors.
- Visually define and differentiate between pedestrian and vehicular entrances through appropriate architectural detailing. **See Figure 77.**

Figure 77. Paving differentiates between pedestrian and vehicular entries.

### Access and Circulation

- Vehicle stacking areas for entering and exiting traffic shall be sufficient in length to minimize traffic backup into surrounding streets or within the garage. A minimum of two vehicle lengths of stacking distance shall be provided between the back of the sidewalk and the control gate.
- One inbound lane shall be provided for a garage with a capacity of up to 500 vehicles. At least two inbound lanes shall be provided for garages with a capacity of more than 500 vehicles.
- The maximum aisle length shall not exceed 400 feet without providing a cross aisle.
- Ramp grades shall not exceed 10 percent and parking areas should not exceed a slope of four to five percent.

## Security and Lighting

- The design of the garage shall eliminate possible hiding places and openings that could allow random pedestrian access.
- During periods when parking activity is substantially less than the garage capacity (i.e., during night operations), there shall be a means of securing unused parking levels from use, including stairwells and elevators. If the garage is not operated on a 24-hour basis the entire facility shall be secured from access during hours when the facility is closed.
- For security reasons, at least one or two sides of the stair tower shall include glass running vertically the height of the tower. Elevators shall be provided with glass-back cabs and shafts. **See Figure 78.**
- Stairs and elevators shall be located adjacent to a street on the exterior of the structure where lobbies can be exposed to outside view.
- The use of security cameras is required.
- A minimum of five foot-candles shall be provided inside the structure and a minimum of three foot-candles for exterior parking areas. Higher levels are recommended for remote areas subject to security problems such as stairways, elevators, and other pedestrian access points.
- Lighting levels shall be equally distributed to provide uniform illumination over all parking areas.
- Light sources shall be shielded so that the source of the illumination is not seen from outside the structure.

Figure 78. Glass-back elevator cab and shaft.

## A. Service Stations

### Site Design

- The site shall be designed to accommodate anticipated circulation patterns and those patterns should be defined by paving and by well-placed landscaped areas.
- In areas developed with buildings adjacent to the sidewalk, service stations shall also be oriented to the sidewalk, placing any service bay door and car wash openings on the rear of the structure.
- Where commercial development abuts the service station, two-way vehicular access integrated with the adjacent commercial development shall be provided where feasible.
- The site design for projects located at street corners shall provide a strong design element at the corner to help frame the public right-of-way and anchor the corner. **See Figure 79.**
- Parking spaces for vehicles left for repair shall be located in the least visible areas of the site and screened from public view.
- Service or car wash bays shall not face toward a public street nor toward a residential zone if the building is within 200 feet of a residential zone.
- Work bays shall be oriented so that the interior of the bays are not visible or audible from a public street, adjacent residential zones, or designated open space. **See Figure 80.**
- Each pump island shall include a vehicle stacking area for at least two vehicles (38-feet), on at least one end of the pump island and shall not restrict vehicle circulation and parking areas.

Figure 79. Corner landscaping element.

Figure 80. Work bays face interior

- A gasoline tanker truck unloading zone shall be provided and shall not obstruct vehicle circulation and parking areas.

### Building Design

- Service station buildings shall be designed to complement and be compatible with the predominant architectural theme and scale of the area. If located within a multi-use center, the architectural design shall be compatible with the design of the center.
- The design of the building should be clean and simple, and shall relate to surrounding buildings through use of similar scale, materials, colors, and/or detailing.
- Building elevations facing public streets and residential zones shall be architecturally detailed to provide interest and the appearance of quality development.
- The roof design of service stations, including pump island canopies, shall incorporate full, pitched roof treatments with a low to moderate slope. **See Figure 81.**
- Building materials shall have the appearance of substance and permanency (e.g., masonry).

Figure 81. Sloped roof on pump island canopies.

### Landscaping and Walls

- A three-foot high, landscaped berm, a dense hedge, or a low wall shall be provided along all street frontages where parking is provided. **See Figure 82.**
- A minimum six-foot high decorative masonry wall shall be provided along side and rear property lines not abutting public streets. A minimum five-foot wide landscaped planter shall be provided adjacent to the wall in areas accessible to the public.

Figure 82. Landscaped berm.

## Site Elements

- Gates, fencing, and walls shall remain free of signs or other advertisements.
- The use of chain-link fencing is prohibited if visible from a public street.
- Where security is an issue, fencing shall consist of open grille work, and the use of surveillance cameras is encouraged.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

## 5. Shopping Centers

### Site Design

- Commercial sites shall be separated from residentially-zoned properties by streets, landscaped buffers and/or decorative masonry walls.
- Portions of primary buildings and/or freestanding satellite buildings shall be located at the street setback lines to enclose the site and help frame the street. **See Figure 83.**
- Buildings within the center shall have a logical spatial and functional relationship to each other and shall provide for convenient pedestrian circulation throughout the center.
- Parking shall be provided within convenient walking distances of all tenants. Walking paths to buildings from the public street shall be provided. **See Figure 84.**
- To reduce the visual impact of large paved areas, parking lots shall be broken up into smaller areas separated by landscaping, pedestrian circulation areas and drive aisles.

Figure 83. Buildings placed at street setback lines.

Figure 84. Walking paths.

- Storage areas and loading facilities shall be limited in number and shall be designed, located, and screened to minimize their visibility from outside public areas and surrounding streets.

### Building Design

- Buildings, hardscape, landscape, site furnishings and signage should reflect a unified theme. **See Figure 85.**
- Where a shopping center is adjacent to a residential zone, the scale of the shopping center shall be reduced to be compatible with the adjoining use by:
  - Keeping buildings as small as possible, particularly in height;
  - Reducing scale through building wall articulation, added detailing and avoiding large scale design elements;
  - Developing the center as a complex of smaller buildings connected by pedestrian-oriented open spaces; and/or
  - Setting the buildings further away from the residential zone and providing dense landscape screening.
- Long, linear buildings shall be avoided. Where such buildings are unavoidable, their length shall be mitigated by changes in building height, wall plane, and spatial volumes and by varied use of window areas, arcades, roof elements, and building materials. **See Figure 86.**
- If the shopping center contains a large scale building, integration of smaller-scale shops along the exterior of the building with entrances from the exterior of the building are desirable in order to create a more human scale and pedestrian-oriented character.

Figure 85. Unified theme.

Figure 86. Articulation along wall plane.

- Side and rear elevations of commercial buildings that are visible from residential zones or public rights-of-way shall be architecturally consistent with the front elevations of the building.
- Blank walls adjacent to main pedestrian areas shall be avoided.
- Flat roofs, mansard roofs, and veneer parapets are strongly discouraged in favor of full, pitched roof treatments. In large centers, a combination of flat roofs with decorative cornices and full, pitched roofs may be acceptable if the design presents a balanced appearance. **See Figure 87.**
- All roof-top and ground-mounted equipment shall be screened from view.
- Outdoor sales and storage areas shall be designed to blend with the architecture of the main building. The height of the screening elements shall be tall enough to screen all stored materials. **See Figure 88.**

Figure 87. Appropriate roofing.

Figure 88. Outdoor sales area.

### **10.10 Development Incentives**

This Section offers development incentives to produce greater land use efficiencies and reduce incremental costs for new development.

#### **A. Applicability**

The incentives in this Section shall apply to all new development that meet(s) the applicable eligibility criteria.

#### **B. Definitions**

For the purposes of this Section, lot consolidation has the following meaning:

1. Lot consolidation. A legal action in which a lot line is removed or abandoned; a lot line is adjusted; lots are merged; or other equivalent action is taken, for the purpose of allowing a structure or development to be built so that it extends over what were previously two or more separate lots. A lot consolidation cannot create additional lots and cannot make existing lots nonconforming. All lots must be identical in ownership.

#### **C. Lot Consolidation Incentives**

1. Eligibility requirements. In order to be eligible for the by-right development incentives indicated in Subparagraph 2, below, the minimum consolidated lot size for a development shall be 97,500 square feet.
2. By-right incentives. Eligible projects shall receive one or more of the following incentives:
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review), irrespective of the number of lots involved.
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 10.6 Parking and Loading Standards, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio (FAR)) and in maximum height shall be in the amounts listed in Table 10-10 Allowable Bonuses for Lot Consolidation. The intensity and height bonus incentives shall apply to the total gross square footage of the consolidated lots or integrated lots.

| Table 10-10<br>Allowable Bonuses for Lot Consolidation |                                  |                    |                               |
|--------------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                            | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.5                                                    | 10%                              | 60 ft              | 15 ft                         |

**D. Green Building Incentives**

1. Eligibility requirements. Projects that are seeking green building certification by a third-party entity (e.g., LEED, etc.) shall be eligible for the by-right development incentives indicated in Subparagraph 2.
2. By-right incentives.
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review).
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 10.6 (Parking and Loading), as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio (FAR) and in maximum height shall be in the amounts listed in Table 10-11 Allowable Bonuses for Green Building. The intensity and height bonus incentives shall apply to the total gross square footage of the project site.

| Table 10-11<br>Allowable Bonuses for Green Building |                                  |                    |                               |
|-----------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                         | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.5                                                 | 10%                              | 60 ft              | 15 ft                         |

**E. Application and Review Process for Incentives**

1. Written submittal. Interested parties shall submit a written request for approval of incentives to the Director of Community Development on forms provided by the Community Development Department.
2. Pre-application hearing. See page 7-110
3. Determination. The Director of Community Development shall determine whether the proposed new development meets the eligibility criteria in Paragraphs C.1. or D.1.

Additional factors to be considered when reviewing applications for incentives shall include the following:

- a. Detriment. The proposal will not detrimentally affect access, design, or other public safety and welfare concerns.
  - b. Covenants or conditions. The proposal will not violate recorded covenants.
  - c. Right-of-way easements. The proposal will not invalidate any easement(s) unless the adjustment establishes replacement easement(s) that is properly filed with the city.
4. Conditions. Conditions may be imposed in connection with the granting of any incentive where the Director of Community Development deems that conditions are necessary to protect the public health, safety, and welfare.

### **10.11 Entitlement Procedures**

#### **A. Purpose**

These administrative procedures have two major purposes:

1. Ensure that development conforms to the SWIP Specific Plan ("Plan").
2. Ensure that the City's review is as expedited as possible while remaining legal and proper.

#### **B. Summary of Processing Procedures**

1. Conformity with the Plan. The Director of Community Development shall review each application for conformity with the development regulations in this Chapter. Conformity has two components:
  - a. Standards. Compliance with the Standards is mandatory and the City may not approve a project that fails to comply with the Standards.
  - b. Guidelines. The City may exercise discretion in evaluating the project's compliance with the Guidelines.
2. Project Review. Applications for development approvals shall be filed with the Department and may be returned for revision. Applicants must meet all items identified as "Standards". Applications must strive to meet the "Guidelines," but applicants may propose alternate ways to achieve the goals of the Guidelines.
3. Timing of Permits and Approvals. Required planning approvals shall be obtained before the issuance of any grading, building, or other construction permit, and before the proposed use is constructed, otherwise established, or put into operation.
4. Processing Requirements. Applications for planning permits shall be processed in compliance with Table 6-12 – Hearing Bodies.
5. Timing of Project Review. Project review shall be required before the issuance of a Building or Grading Permit, Business License, or Certificate of Occupancy for any new structure (not including fences or walls) and/or existing structures to be reconstructed or remodeled (including facade improvements).

Table 6-12 – Hearing Bodies

| Reviewing Bodies                       |        |      |    |    |     | Appeal Bodies |    |
|----------------------------------------|--------|------|----|----|-----|---------------|----|
|                                        | D.A.B. | CD   | PC | CC | PR  | PC            | CC |
| Administrative site plan               | X*     | X    |    |    |     | X             |    |
| Administrative site plan, amendment    | X*     | X    |    |    |     | X             |    |
| Building relocation                    |        | X    |    |    |     |               | X  |
| Certificate of appropriateness         |        |      |    |    |     |               | X  |
| Code of the City of Fontana, Amendment | X      |      | Xf | X  |     |               |    |
| Conditional Use Permit                 | X      |      | X  |    |     |               | X  |

## Notes:

Decisions of any "Reviewing Body" may be appealed to the City Council, except where State law limits such appeal to the City Engineer. If the Planning Commission is listed above as the "Appeal Body", the Commission must first review an Appeal before it may be forwarded to the City Council for consideration.

DAB—Development Advisory Board

CD—Community Development Director

PC—Planning Commission

CC—City Council

PR—Parks and Recreation Commission

X\*—At the discretion of the Director of Community Development or his/her designee

X\*\*—If Public Park(s) are considered

X\*\*\*—City Engineer has final approval

f—Recommending body to the City Council

**C. Administration and Enforcement.**

The Director of Community Development shall enforce the provisions in this Specific Plan. All officers, employees, and officials of the City of Fontana, who are vested with the duty or authority to issue permits or licenses shall conform with this Specific Plan and shall not issue any permit or license, or approve any use or building, which would be in conflict with this Specific Plan. Any permit, license or approval issued that is in conflict with the requirements of this Specific Plan shall be considered null and void.

**D. Amendments to the Specific Plan.**

The SWIP Specific Plan may be amended utilizing the same procedures by which it was originally adopted. In addition, subsequent amendments to this Specific Plan shall demonstrate the amendment meets the intent of the Specific Plan's existing policy framework, or specific findings to demonstrate the amendment enhances the Plan or is necessary to more effectively implement the Specific Plan. All sections or portions of the Specific Plan proposed to be amended or that may be affected by the amendment must be identified during the amendment process. A concurrent amendment to the General Plan would not be required provided that the Director of Community Development determines that substantive changes would not influence the goals, objectives, policies, or programs of the General Plan.

Allowing flexibility in the administration of the Specific Plan enhances the effectiveness of the Specific Plan as a comprehensive, "living" planning document. The following minor modifications to the Specific Plan qualify for processing as an administrative amendment to the Specific Plan subject to the review and approval of the Director of Community Development:

- Changes in the location of infrastructure and public facilities (e.g., internal roads, drainage facilities, etc.).
- Minor change in roadway alignment.
- Adjustment of planning area boundaries provided the total acreage of the affected planning area does not increase or decrease by more than 20 percent of the total stated in the approved Specific Plan.
- Minor changes to the Design Guidelines, which are intended to be flexible in nature.
- Minor deviations (less than 10 percent) from the development standards in this Chapter.
- Other minor modifications similar to those listed above and deemed minor by the Director of Community Development, which are in keeping with the intent of the SWIP Specific Plan.

**E. Similar Use Determination**

1. **Applicability and Authority.** Unlisted uses in Table 6-2 are prohibited uses, unless the Director of Community Development finds a proposed use to be similar to an expressly allowed use in compliance with this Section. A Similar Use Determination is a process for determining when an unlisted use is similar in nature to a permitted or conditionally permitted use and may be permitted. As specified by Municipal Code Section 30-4 Other Uses to be determined by the Director of Community Development, the Director of Community Development shall have the responsibility and authority to make Similar Use Determinations.
2. **Ministerial Action.** A Similar Use Determination shall constitute a ministerial action.
3. **Application Contents and Filing.** An application for similar use shall be in writing on forms provided by the Director of Community Development.
4. **Determination Findings.** In determining "similarity," the Director of Community Development shall make all of the following findings:
  - a. The characteristics of and activities associated with the proposed use are equivalent to one or more of the listed uses and will not involve a higher level of activity or environmental impacts than the uses listed in the land use district;
  - b. The proposed use will be consistent with the purposes of the applicable land use district; and
  - c. The proposed use will be consistent with the General Plan and this SWIP Specific Plan.
5. **Notice.** A Similar Use Determination shall be made in writing and shall contain the facts that support the determination. The Community Development Department shall maintain all determinations on record for review by the general public upon request. The notice shall include:
  - a. A brief statement explaining the criteria and standards considered relevant to the decision;
  - b. A statement of the standards and facts relied upon in rendering the decision; and
  - c. An explanation of appeal rights and appeal deadlines. The determination of similar use by the Director of Community Development shall be subject to appeal to the Planning Commission.

***F. Dedication and Maintenance of Gateway Intersection Enhancements***

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for gateway intersection enhancements in Section 6.8.B Public Right-of-Way Streetscape- Gateways, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standards indicated in Section 6.8., Public Right-of-Way Streetscape; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.
  - c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure the installation and perpetual maintenance of the gateway intersection enhancements.

***G. Nonconforming Lots, Structures and Uses***

1. Nonconformance provisions are established to:
  - a. Bring all uses, structures, sites and signs into conformance with the developmental requirements and design guidelines in this Specific Plan;
  - b. Limit the occurrences and extent of nonconformance by prohibiting expansion, intensification, reinstatement, alteration, restoration after destruction, and reestablishment after abandonment; and
  - c. Gradually phase out nonconforming uses, structures, lots and signs.
2. Applicability
  - a. Nonconforming uses, structures, signs and lots may be maintained, expanded, altered and/or abated only in accordance with the provisions of this Specific Plan.
  - b. Any Designated Historic Landmark, or any property listed on the California Register of Historical Resources or National Register of Historic Places, shall be exempt from the provisions of this Section with respect to the restoration and maintenance of structures, provided that any construction plans are approved

through a Certificate of Appropriateness by the Historic Preservation Commission/Planning Commission.

3. Nonconforming Uses. A use that lawfully occupied a building or land at the time this Specific Plan became effective, and that does not conform to the use regulations of the land use district in which it is located, is deemed a "legal nonconforming use." A legal nonconforming use may continue, subject to the following:
  - a. Discontinuation of Use
    - i. Loss of legal nonconforming status. If a legal nonconforming use is discontinued for a period of 90 or more days, regardless of the owner's intent, it shall lose its legal nonconforming status and the continued use of the property shall be required to conform to all provisions of this Specific Plan.
    - ii. Extension of legal nonconforming status. Wherein special circumstances exist, the Director of Community Development may extend the legal nonconforming status of a use, for up to an additional 90-day period. Furthermore, an additional extension may be granted by the Planning Commission, for up to an additional 90-day period. The total time period of all time extensions shall not exceed 180 days.
    - iii. Extension of legal nonconforming use.
      - (1) An application for a Minor Use Permit shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Community Development Department to process the application. The application shall be filed prior to the expiration of the 90-day period.
      - (2) The application shall be reviewed by the Director of Community Development within 30 days following application filing. The Director of Community Development shall notify the applicant, in writing, as to whether the application is complete. If the application is not complete, the Director of Community Development shall specify those parts of the application that are not complete and shall identify the manner by which it can be made complete. If written notification is not provided to the applicant within 30 days following application filing, the application shall be deemed complete.
      - (3) The Director of Community Development shall investigate the facts bearing on the application and provide the information necessary for action on the application, consistent with this Specific Plan and the General Plan. The applicant shall have made a good faith effort through the submittal of documentation and has diligently pursued compliance with this Specific Plan.

- (4) The application shall be reviewed by the Director of Community Development at a duly noticed public hearing, whom shall then approve, modify or deny the application. The decision of the Director of Community Development shall be final and conclusive in the absence of a timely filed appeal to the Planning Commission. An appeal of the Director of Community Development's decision shall be filed within 10 days from the date of the decision. An appeal of the Director of Community Development's decision shall be reviewed by the Planning Commission. The decision of the Planning Commission shall be final and conclusive in the absence of a timely filed appeal to the City Council.
- (5) The applicant may appeal the decision of the Planning Commission to the final deciding body, the City Council. The City Council decision shall be final and conclusive. If the application to extend the legal nonconforming use is approved by the City Council, the extension shall be granted for 90 days from the date of approval.
- (6) If the Director of Community Development or appointed designee has determined that the applicant has failed to show a good faith effort towards continually processing the extension of legal nonconforming use application (i.e., revising plans, withdrawing the application, placing the project on hold, etc.), the legal nonconforming use shall cease within 60 days from the application submittal date.
- (7) In granting an extension of the legal nonconforming status, the Director of Community Development may attach reasonable conditions and restrictions to the request, in addition to those required by this Specific Plan, which will ensure that the use:
  - Will not endanger the public health, safety or general welfare;
  - Will not injure the value of adjoining or abutting property;
  - Will not result in any significant environmental impacts; and
  - Will be in harmony with the area in which it is located.
- (8) In approving an extension of the legal nonconforming status, the Director of Community Development or Planning Commission shall consider and clearly establish the following findings of fact:
  - The non-conforming use has been discontinued within the 90-day period.
  - A physical and/or economic hardship has prevented the nonconforming use from being in compliance prior to the expiration of the 90-day period;
  - Approving the extension will not adversely affect the health, safety or general welfare.

- 10-105

- The Planning Commission, at a duly noticed public hearing, must find that continuing the nonconforming structure will not result in an annoyance to and/or reduction of any surrounding property; and
- The extent of damage or partial destruction shall be based upon a comparison of the estimated cost of restoring the structure to its condition prior to such damage or partial destruction with its value at the time the structure was damaged or partially destroyed. Estimates for such purpose shall be made by or reviewed by the Building Official; and
- The restoration is commenced within six months and diligently pursued to completion;
- An application for a Nonconforming Structure shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Planning Division to process the application. The application shall be filed prior to the expiration of the 90-day period.
- A structure or development that has been damaged or destroyed by fire, flood, wind, earthquake, or other calamity, or by public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented may be reconstructed up to the original size, placement and density, except a multiple family dwelling or development which has been abandoned for a period of 90 or more days prior to being involuntarily damaged or destroyed, or a multiple family dwelling or development constituting a public nuisance prior to being involuntarily damaged or destroyed may not be reconstructed unless the structure is made to comply to all provisions of this Specific Plan.

b. Alterations and Expansion

- i. A nonconforming structure shall not be moved, altered or enlarged so as to increase the discrepancy between existing conditions and the most current standard as prescribed by the land use district in which the structure is located, except alteration and/or enlargement to a single family dwelling conducted pursuant to section (e) "Nonconforming Single-Family Residential Structures".
- ii. Within land use districts, reasonable repairs and alterations may be made to legal nonconforming structures, provided that no structural alterations shall be made which would prolong the life of supporting members of a structure, such as bearing walls, columns, beams or girders. Structural elements may be modified only if such modification or repair is immediately necessary to protect the public health and safety, occupants of the legal nonconforming structure, or adjacent property, as determined by the Building Official. The total cost of such repairs or alterations may not exceed 50 percent of the replacement cost of the nonconforming structure.

- c. New Structures. Any new structure constructed on a lot or parcel with an existing legal nonconforming structure shall be constructed in conformance with all applicable provisions of this Specific Plan. However, in no case may a new nonresidential structure be constructed on the same lot as an existing legal nonconforming residential structure.
        - d. Abatement of Nonconforming Structures Posing a Threat to the Public Health, Safety, and General Welfare. A structure which is nonconforming because of a violation or deficiency that poses a threat to the public health, safety or general welfare, as determined by the Building Official, and which fails to resolve, repair or improve such, or to fully mitigate the hazard involved, shall be abated, condemned or demolished upon the issuance by the City of a nuisance abatement, condemnations, or demolition order.
        - e. Nonconforming Single-Family Residential Structures. In addition to the requirements of subsections a and d above, a nonconforming single family residential lot and/or structure that was lawfully established and maintained before the adoption of this Specific Plan, but which under the provisions of this Specific Plan does not conform with the regulations of the land use district in which it is located with respect to use, design and/or development standards, and which is continuously used and maintained for single family residential purposes, shall be subject to the following:
        - f. Alterations and expansions to structures within nonresidential zones.
          - i. Necessary repairs and desirable alterations, as deemed appropriate by the Director of Community Development, may be made to a legal nonconforming single family residential structure that is nonconforming as to use.
          - ii. A single family dwelling that is nonconforming as to its location within a land use district that does not permit single family dwellings, and in which the residential use was lawfully established and continuously maintained, shall be subject to the development regulations of the Municipal Code Chapter 30 Zoning and Development Code that pertain to the R1 zoning district and off-street parking and loading regulations..- 5. Nonconforming Signs. A sign lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of Section 6.7 Sign Standards, is deemed a "legal nonconforming sign." A sign that presents a hazard to public safety, as determined by the City, shall be removed upon the issuance of a notice by the City. A legal nonconforming sign may continue to exist, subject to the following:
  - a. A nonconforming sign may not be altered, enlarged, extended, or moved, except in conformity with the requirements of Section 6.7 Sign Standards, or as otherwise required by law;

- b. Where a use or a structure associated with a nonconforming sign is abandoned or discontinued, any sign associated with a new use of the site shall be in full conformity with the requirements of Section 6.7 Sign Standards.
- 6. Nonconforming to Development Standards. The development that is not in compliance with the site development standards prescribed by the regulations of the zoning district in which the lot or parcel is located, including area, coverage, configuration, dimensions, parking, landscaping, screen walls, fences and enclosure trash receptacles, is deemed "legal nonconforming," provided such development was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A development that is nonconforming as to landscaping, screen walls, fences and enclosure of trash receptacles, shall be altered to comply with the district regulations covering the following standards, or as a condition of any subsequent Development Plan or Conditional Use Permit approval.
- 7. Nonconforming Lots. A lot or parcel that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area and configuration is deemed a "legal nonconforming lot," provided such lot or parcel was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A lot or parcel that is nonconforming as to minimum area or dimension shall be granted all development rights and uses of the land use district within which it is located.
    - i. The landscaping of setback areas insofar as a setback exists;
    - ii. The landscaping of parking areas, provided fulfilling the requirement does not reduce off-street parking or loading spaces to fewer than prescribed in this Specific Plan;
    - iii. The screening of storage areas; and
    - iv. The enclosure of trash receptacles.
- 8. Elimination of Nonconforming Adult Business Uses. Nonconforming adult business uses shall be eliminated in compliance with Municipal Code Chapter 30 Zoning and Development Code.
- 9. Abatement of Nonconforming Uses, Structures, Lots and Signs. Whenever a use, structure, site or sign becomes nonconforming because of a change of land use district boundaries or a change of the regulations prescribed for the district in which the site is located, the period of time prescribed in this Specific Plan for the abatement period for the elimination of the use, the removal of the structure or sign, or the improvement of the lot or parcel shall begin on the effective date of the change of district boundaries or regulations.

### ***11.1 Purpose***

The Slover West Industrial District (SWD) is intended to promote the continued use and expansion of existing industrial, distribution and logistics-based, and warehousing developments, along with well-placed service commercial uses. Adjacent existing residential uses are buffered from potential adverse impacts of higher intensity uses. General features of this District include:

- Landscape/Streetscape Enhancement
- Preservation and Revitalization of existing industrial uses
- Large-Scale Industrial and Manufacturing Development
- Promotion of lot Consolidation
- Establishment of uses that capitalize on current and future regional market potential, including warehousing and manufacturing uses
- Development that respects adjacent residential development
- Preservation of the view corridor along major roads

## **11.2 Applicability**

### **A. Projects Subject to Development Regulations**

This Chapter contains the development regulations that govern all future private development actions in the SWD, including new construction, additions or renovations to existing structures and/or new land uses proposed for existing facilities.

### **B. Right of Continued Use**

This Chapter shall not require any change in any existing building or structure for which a building permit has been previously issued, or for approved plans on file in the Community Development Department before the effective date of this Specific Plan. Changes in the property's ownership or tenants of legal existing uses shall likewise require no change in any existing building or structure. Nonconforming standards and provisions shall be governed by Section 11.11 Entitlement Procedures.

### **C. Other Requirements**

This Chapter does not eliminate the need for obtaining any other permits required by the City, or any permit, approval or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.

### **D. Types of Development Regulations**

The development regulations are of two types – Standards and Guidelines – as follows:

1. Standards address those aspects of development that are essential to achieve the goals of the Specific Plan. They include specifications for allowable land uses and site development (e.g., building height, setbacks, etc.). Conformance with Standards is mandatory. Standards are indicated by use of the words "shall," "must," or "is / is not permitted."
2. Guidelines provide guidance for new development in terms of aesthetics and design details. They are intended to direct building and site design in a way that results in the desired character for the SWD. Whereas conformance with the Standards is mandatory, conformance with the Guidelines is preferred and/or recommended. Provisions that fall into this category are indicated by the use of the words "should," "may" or "are encouraged to." In various cases, the Guidelines provide a choice of treatments that will achieve the desired effect. Developers are permitted to propose alternative design details if they are able to show that such details implement the Specific Plan objectives with respect to the desired character of the SWD.

### **E. Minimum Requirements**

The provisions in this Chapter shall be minimum requirements. When this Chapter provides for discretionary authority on the part of the Director of Community Development, Planning Commission, or City Council, that discretion may be exercised to impose more stringent requirements if deemed necessary to accomplish the overall objectives of the SWD.

**F. Overview of Development Regulations**

1. Relationship of Land Use Districts. The development regulations in this Chapter apply to properties in the SWD. Exhibit 11.1 – Land Use Plan indicates the location of the SWD and its relationship to the other land use districts in the Specific Plan area.
2. Standards, Guidelines, and Procedures. The development regulations are divided into the following sections: 11.3 Allowable Land Uses and Permit Requirements; 11.4 Development Regulations; 11.5 Landscape Standards; 11.6 Parking and Loading Standards; 11.7 Sign Standards; 11.8 Public Right-of-Way Streetscape; 11.9 Design Guidelines; 11.10 Development Incentives; and 11.11 Entitlement Procedures. Projects must meet all development standards in order to achieve approval in the development review process. Projects are encouraged to adhere to the guidelines contained in Section 11.9 Design Guidelines.
3. Steps for Using Chapter. Table 11-1 Process Procedures illustrates the steps for using this Chapter.

**Table 11-1 – Process Procedures**

| <i>Instructions</i>                                                                                                         | <i>Information Source</i>                                | <i>Where to Find in this Chapter</i> |
|-----------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|--------------------------------------|
| Locate property and its street frontage                                                                                     | Land Use Plan                                            | Exhibit 11.1                         |
| Identify the allowable uses and refer to the definitions of the uses                                                        | Allowable Land Uses & Permit Requirements Definitions    | Table 11-2<br>Appendix A             |
| Comply with the requirements for intensity, lot dimensions, height limits, and setbacks                                     | Intensity and Dimensional Standards                      | Table 11-3                           |
| Comply with fence, wall, and screening requirements                                                                         | Fence, Wall, and Screening Standards                     | Table 11-4                           |
| Comply with landscaping requirements                                                                                        | Landscape Regulations<br>Public Right-of-Way Streetscape | Section 11.5<br>Section 11.8         |
| Comply with parking requirements                                                                                            | Parking and Loading Standards                            | Section 11.6                         |
| Comply with sign requirements                                                                                               | Sign Standards                                           | Section 11.7                         |
| Review the design guidelines for preferred site layout, building orientation and architectural detail, fencing, and parking | Design Guidelines                                        | Section 11.9                         |
| Determine if development is eligible for incentives                                                                         | Development Incentives                                   | Section 11.10                        |
| Submit project application and proceed through project approval process                                                     | Entitlement Procedures                                   | Section 11.11                        |

Exhibit 11-1 – Land Use Plan

### **11.3 Allowable Land Uses and Permit Requirements**

This Section identifies allowable land uses and their permit requirements.

#### **A. Allowed Uses**

Table 11-2 Allowable Land Uses and Permit Requirements identifies the types of land uses allowed in the SWD and the permit required to establish each use.

#### **B. Uses Not Listed**

Uses not listed in Table 11-2 are prohibited land uses, until and unless the Director of Community Development makes a similar use determination in compliance with Subsection 11.11.C Entitlement Procedures--Similar Use Determination.

#### **C. Other Applicable Regulations**

The provisions contained in this SWIP Specific Plan constitute the primary land use and development standards for the Specific Plan area. These regulations are in addition to the provisions in the City of Fontana Municipal Code.

This Specific Plan provides all development standards and guidelines necessary to approve subsequent project applications, unless otherwise noted. Permit processing procedures (e.g., noticing, hearing, appeals, and expiration procedures) and enforcement procedures are provided in Municipal Code Chapter 30 (Zoning and Development Code) shall apply, unless otherwise noted. Where there is a conflict between the provisions in this Specific Plan and those in the Zoning and Development Code, the Specific Plan provisions shall prevail to the extent allowable under Federal or State law. Where there is no conflict, both shall be applied concurrently.

#### **D. Definitions**

Definitions for land uses are provided in Appendix A Definitions. If a definition is not provided, the definitions in the Municipal Code shall apply. The Director of Community Development shall interpret the definitions; make a similar use determination in compliance with Subsection 11.11.C Entitlement Procedures—Similar Use Determination; and/or refer any questions to the Planning Commission for its determination. For the purposes of this Specific Plan, the following definitions shall apply:

1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
2. Industrial Use: Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

(2) See Section 11.9E

## **11.4 Development Standards**

New land uses and structures and alterations to existing land uses and structures in the SWD shall be designed, constructed, and established in compliance with the requirements in this Section.

### **A. Intensity and Dimensional Standards**

Table 11-3 Intensity and Dimensional Standards provides the required intensity and dimensional standards for proposed development. The Director of Community Development is authorized to approve modifications of 10 percent or less of any land use district setback, lot width, lot depth, building coverage, building height, or wall height standard in compliance with the administrative variance procedures in Municipal Code Section 30-51.6 (Findings necessary for granting a variance). See Exhibit 11-3 – Dimensional Standards.

The Director of Community Development may grant an administrative variance from the requirements of this chapter where practical difficulties, unnecessary hardships, or results contrary to the intent of this chapter would occur from the strict and literal interpretation and enforcement of the Code. An administrative variance may be granted upon conditions which will ensure the protection of the public safety, health and welfare. To grant an administrative variance, the Director of Community Development must find from the facts presented that the following conditions exist.

- (1) That because of circumstances applicable to the property including size, shape, topography, location or surroundings, the strict application of this chapter will deprive the property of privileges enjoyed by other property in the vicinity and under identical zoning classification;
- (2) That the granting of such an administrative variance will be subject to conditions assuring that the variance shall not constitute a grant of special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district in which the property is located;
- (3) That the administrative variance does not authorize a use or activity which is not a specifically allowed use in the zoning district in which the property is located; and
- (4) That the granting of one administrative variance will not be contrary to the general plan.

Table 11-3 - Intensity and Dimensional Standards

## Lot Size and Building Placement

|                                                                                  |                                                      |
|----------------------------------------------------------------------------------|------------------------------------------------------|
| <b>INTENSITY</b>                                                                 |                                                      |
| Floor Area Ratio (3)                                                             | 1.0 max. FAR                                         |
| <b>LOT DIMENSIONS</b>                                                            |                                                      |

| Within street side setback area                                                                                     | Tubular steel construction allowed in required setback area if set back at least 15 ft from lot line. Solid masonry wall not allowed in required setback area. | 8 ft if necessary for security purposes, with 18-inch maximum width pilasters a minimum of 8 ft on center |
| Within interior side setback area                                                                                   | Any type of fence, hedge, or wall allowed, except that if abutting residential zone, solid masonry wall only                                                   | 8 ft                                                                                                      |
| Within rear setback area                                                                                            | Any type of fence, hedge, or wall allowed, except that if abutting residential zone, solid masonry wall only                                                   | 8 ft                                                                                                      |
| Outside of a required setback area                                                                                  | Solid or open fencing/wall                                                                                                                                     | No height limit                                                                                           |
| Screening of outside storage materials and equipment from view from the public right-of-way                         | Solid fencing/wall                                                                                                                                             | 8 ft                                                                                                      |
| At intersections of alleys, streets, and driveways                                                                  | Solid or open fencing/walls                                                                                                                                    | 30 inches                                                                                                 |
| Note: (1) All fences and walls shall meet the City's line of sight regulations, as determined by the City Engineer. |                                                                                                                                                                |                                                                                                           |

2. Materials

- a. Open fencing shall mean fencing with over 50 percent of the surface area open for free passage of light and air and through which the area behind the fence is visible to public view. See Exhibit 11-3 – Open and Solid Fencing.
- b. Solid fencing shall mean fencing with 50 percent or less of the surface area open for free passage of light and air and designed to conceal the area behind the fence from public view. See Exhibit 11-3 – Open and Solid Fencing.
- c. Barbed wire fences, electric fences, or similar fencing material is prohibited.
- d. Chain link fencing is allowed on interior property lines that are not visible from public rights-of-way.

3. Screening and buffering

- a. Roof-mounted and ground-mounted mechanical equipment, utilities, storage, and solid waste storage areas shall be screened from adjoining properties and public right-of-ways by a visual barrier (e.g., wall, fence, landscape material, etc.) to the satisfaction of the Director of Community Development. Where only landscaping is used for screening, it shall be planted with five-gallon (minimum size) shrubs spaced to provide a continuous dense screen.
- b. Parking lot perimeters shall be screened and planted in compliance with Section 11.6 Parking and Loading Standards.

**C. Outdoor Activities and Storage**

1. Storage in Setback Areas. Material or equipment shall not be stored anywhere in the front yard area. Temporary storage of construction materials during construction on the same site is allowed. Boats, campers, motor vehicles, trailers, equipment, materials, or antenna may be stored in side and rear yards, provided that they are outside the required side and rear identified in Table 11-3 Intensity and Dimensional Standards.
2. Limitations on Outdoor Uses
  - a. All uses shall be conducted entirely within a completely enclosed building that is attached to a permanent foundation, except approved outdoor dining areas, parking areas, industrial activities, truck trailer storage, and other approved uses that require outdoor activities.
  - b. Areas used for the approved outdoor storage of vehicles, equipment and/or building materials (raw or finished) may use compacted slag, gravel, or other similar material deemed suitable by the Director of Community Development.
3. Outdoor uses. Outdoor uses shall comply with the following:
  - a. A building shall be provided on the same parcel or on an adjacent parcel associated with the same business.
  - b. All display materials, including vehicles, shall be set back five feet from any landscaped area and shall not be located on required parking areas.
  - c. The entire area used for display purposes shall be surfaced with asphalt or an equally serviceable hard pavement surface. The surface shall be maintained in good condition.

- d. Storage of equipment or materials, with the exception of the display of vehicles for sale or rent, shall be screened by a visually solid masonry wall of minimum height six feet. The approving authority may determine through the design review process that the subject use requires a solid masonry wall higher than six feet.
- e. Outdoor display areas shall be maintained in a neat and orderly condition.

***D. Caretaker Housing***

Caretaker housing shall be:

1. Accessory to a principal use;
2. A maximum of 1,500 square feet total floor area unless otherwise approved by the planning commission;
3. Limited to one unit per lot; and
4. Subject to the setback requirements applicable to the principal structure with which it is associated.

***E. Solar Access***

A structure, fence, or wall shall not be constructed or modified, and vegetation shall not be placed or allowed to grow so as to obstruct more than 10 percent of the absorption area of a solar energy system on an abutting or adjacent lot at any time.

***F. Undergrounding of Utilities***

1. Utility service laterals to new development shall be installed underground.
2. Temporary overhead power and telephone facilities are permitted only during construction.
3. Placement, location and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.
4. Transformer enclosures shall be designed of durable materials with finishes and colors used that are compatible and harmonious with the overall architectural theme.
5. All utilities including, but not limited to drainage systems, sewers, gas lines, water lines, and electrical, telephone, and communications wires and equipment shall be installed and maintained underground. Placement, location, and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.

## G. Registered Vehicle Storage

Registered vehicle storage will be defined as follows:

Registered Vehicle Storage means an off-street, ground level open area that allows parking for the purpose of storage of vehicles, including but not limited to, truck, truck-trailer, buses, boats, construction equipment, recreational vehicles, and automobile storage. These vehicles are to be stored and are not for sale, rental, or leasing. Maintenance or vehicle repair is not permitted at the premises unless otherwise separately allowed and approved under a separate conditional use permit.

Special use regulations are proposed to be applied to Registered Vehicles Storage. All businesses with registered vehicle storage shall comply with the following provisions:

1. The entire storage area shall be surfaced with asphalt, cement or an equivalent material. For specified and delineated storage areas, excluding required drive aisles and required non-storage parking, slag or gravel shall be considered as an equivalent paving material on a case-by-case basis. The surface material shall be striped as required (when feasible) and shall be maintained in good condition.
2. All storage areas shall clearly be identified on the site plan for the property and shall be screened from view from the public right-of-way by one or more decorative block screening walls. All screening walls adjacent to a public right-of-way shall have a minimum height of eight (8) feet and shall not be located in a required landscape setback area. Additional wall height and/or berming may be added as needed to satisfy screening requirements.
3. A line-of-sight analysis clearly demonstrating that all registered vehicles proposed to be located in the storage area(s) are screened from view from all adjacent public rights-of-way at all times shall be required with all proposals and/or applications. For the purpose of the line-of-sight analysis, the assumed height of the vehicles to be stored shall be fourteen feet and six inches (14'6"). To meet this requirement, storage areas shall be set back from required screening walls to provide the required line-of-sight clearance for screening. Storage areas which have been set back to provide the required line-of-sight clearance for screening shall be identified on the site plan and shall be marked and maintained at all times in a manner consistent with the site plan.
4. All vehicles stored on the premises shall have a valid vehicle registration from the State of California or other similar government entity and shall be maintained in an operable condition at all times.
5. Fire access lanes of a minimum twenty-six feet (26') in width shall be required along the interior perimeter of any required decorative block screening wall adjacent to a public right-of-way. Additional fire access lanes shall be provided

- as required by the Fire District. This required fire access lane may be used to meet the line-of-sight clearance set back requirement above.
6. All on-site fire access lanes, drive aisles, required parking, etc., (but not including Identified and marked vehicle storage areas) shall be paved with asphalt, cement or an equivalent material; gravel or slag in these lanes is specifically prohibited.
  7. A guard station or similar structure shall be required near the primary access to the premises. The minimum size of such structure shall be sixteen square feet.
  8. A residence for a caretaker may be permitted and incorporated into the project subject to the approval of a Conditional Use Permit application.
  9. Permanent on-site security lighting shall be required to be designed and installed to the standards and satisfaction of the Police Chief or his/her designee.
  10. Fire hydrants shall be required to the satisfaction of the Fire District.
  11. Vehicles stored on the premises shall not themselves be used as storage containers to store materials in them. With prior 72 hour written notice to the property and/or business owner, any and all stored vehicles shall be open to inspection for the purpose of enforcing this provision.
  12. To provide adequate space dimensions to accommodate the movement off large vehicles on the site, the minimum lot size shall be two (2) acres with a minimum lot width of 300 feet and a minimum lot depth of 300 feet. Irregular or unusually shaped lots may require additional minimums to meet the intent of this regulation, as shall lots with unusual, irregular, or severe topographic features or changes.
  13. Landscaping adjacent to the public right-of-way is required per the Code. Interior lot landscaping shall not be required for any internal area (wall perimeter, parking area, storage area, etc.) enclosed by the required screening walls. Incidental landscaping may be required as needed to satisfy screening and other requirements in interface area(s) open to public view (entry gate, guard station, etc.)

## 11.5 Landscape Standards

### A. Required landscaping

This section provides the required minimum standards for all landscaped areas within any new and rehabilitated private development.

1. Landscaped area means the entire parcel less the building footprint, driveways, nonirrigated portions of parking lots, and hardscapes (such as driveways, approaches and sidewalks). Decorative hardscapes used to enhance the landscape will be considered as part of the landscape area; this would include such things as cobble rock, decomposed granite, brickwork, stamped concrete, gravel, pavers, and water features.
2. Landscape setbacks along public right-of-ways shall incorporate landscape buffers with undulating and variable height earth-mounding (berms), and/or low walls, and required plant materials as shown in Table 11-5 Landscape Standards.
3. Block wall and wrought iron fencing shall be located behind landscape setback area(s).
4. The developer shall submit to the City's Department of Engineering, a Landscape Documentation Package, that conforms to the requirements of the Water Efficient Landscape Ordinance in Municipal Code, Chapter 28Vegetation.
5. All new development landscaping shall comply with the standards shown in Table 11-5 Landscape Standards. Additional guidelines that should be considered are addressed in Section 11.9 Design Guidelines.
6. The Recommended Plant Materials Palette, Table 11-6, can be found immediately after this section. The plant materials palette is provided to ensure the installation of drought-tolerant, water efficient landscaping that will provide wind breaks and thrive in the local climate conditions. In an effort to provide visual elements that distinguish this district from others, please note that turf (grass) does not appear in the Plant Materials Palette, and shall be prohibited, in lieu of drought-tolerant ground covers.
7. Public right-of-way improvements, including street improvements, streetscape/landscape (parkway) improvements, and street tree requirements, are in Section 11.8 Public Right-of-Way Streetscape.

**Table 11-5 Landscape Standards (1)**

*Note: The Community Development Director may require additional setbacks.*

|                                                                                                      |                                                                                                                                                                                                                                                                                                                        |

| Landscape buffer in any side or rear yard abutting a residential zone                                | 20 ft minimum width with 1 tree for each 20 linear feet of lot line, and 3 shrubs per tree                                                                                                                                                                                                                             |

**B. Recommended Plant Materials Palette**

Table 11-6 Recommended Plant Materials Palette provides a listing of primarily drought-tolerant trees, shrubs, and ground covers to provide water efficient landscaping in new projects. The limited selection of landscape material in the palette is envisioned to assist the user in incorporating sustainable landscaping into the project, while including enough variety of size, form, and density, to meet the requirements within buffer setbacks and screening techniques. Final selection shall be approved by the City. The Director of Community Development shall approve artificial turf.

## **11.6 Parking and Loading Standards**

### **A. Applicability**

This section contains regulations for off-street parking and loading. Regulations identify required number of parking and loading spaces for all new development projects and those proposing substantial modification to existing buildings. Please refer to Municipal Code Chapter 30 Zoning and Development Code for all parking and loading regulations not specifically addressed in this section.

### **B. General Parking and Loading Regulations**

1. Methods of Calculation.
  - a. Multiple Uses. If more than one use is located on a site, the total number of required off-street parking and loading spaces shall be the sum of the requirements for the various uses computed separately. If individual uses on the same site have a floor area less than that for which loading spaces would be required, then the total gross floor area of all uses on the site or lot shall be used in determining the required number of loading spaces.
  - b. Fractional Number. Whenever the computation of the required number of off-street parking or loading spaces results in a fractional number, one additional space shall be required for a fraction of more than one-half, but shall not be required for a fraction of one-half or less.
2. Off-Site Location. Required off-street parking spaces shall be located on the same property as the use that they are intended to serve. Where the required parking spaces cannot be accommodated on the same property, they may be located in a separate off-site parking facility that is not more than 300 feet from the use(s) they serve, subject to approval by the Director of Community Development.
3. Shared Use. Required off-street parking and loading spaces shall not be considered as providing parking or loading spaces for any other use, except where shared use facilities are approved in compliance with Subparagraph 5 Adjustments to Parking Requirements, below.
4. Uses Not Specified. For uses not specified, the Director of Community Development shall determine parking requirements based upon the requirements of the most similar use. See Subsection 11.11.C Entitlement Procedures-- Similar Use Determination.
5. Adjustments to Parking Requirements.
  - a. Administrative Variance. The Director of Community Development is authorized to approve alternate parking plans involving a modification of 10 percent or less of any of the off-street parking and loading standards in compliance with Section 30-51.5 of Municipal Code Chapter 30.

- b. **Parking Study Option.** An applicant may submit a separate parking and loading study for new development to the Director of Community Development for review. A parking and loading study shall provide sufficient data and information to justify the need for adjustments to the parking and loading requirements and shall analyze whether:
  - i. Adequate off-street parking will be provided for the project;
  - ii. The project demonstrates the use of creative design concepts, including but not limited to shared parking facilities, transit accessibility, pedestrian amenities, and bicycle amenities;
  - iii. Environmental impacts associated with the project will not be increased by the modification of standards; and
  - iv. Traffic safety and pedestrian safety will be enhanced by the modifications.
- c. **Shared Use Facility.** Required off-street parking and loading spaces may be considered as providing parking or loading spaces for another use where joint facilities serving more than one use contain no less than the total number of spaces deemed necessary for each individual use added together with other uses. Where adjoining uses on the same site have different hours of operation with minimal conflict, the Director of Community Development may determine that some or all of the same spaces may be counted as satisfying the requirements for both uses, provided that the number of spaces shall not be less than the prescribed for the use requiring the greater number.

**C. Required Number of Parking Spaces**

Each land use shall provide the number of off-street parking spaces indicated in Table 11-7 Parking Requirements by Land Use, except where adjustment has been granted in compliance with Subparagraph 11.6.B.5 Adjustments to Parking Requirements, above. For the purposes of this Section, the following definitions shall apply:

- 1. **Commercial Use:** Activity involving the sale of goods or services carried out for profit.
- 2. **Industrial Use:** Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

Note: Sources consulted to compile the table entries include the Municipal Code; The Dimensions of Parking, ULI and National Parking Association, 5th Edition, 2010; Recommended Zoning Ordinance Provisions, National Parking Association, December 2006; and Parking Standards, APA Planning Advisory Service Report 510/511; November 2002.

**D. Required Number of Loading Spaces**

Each land use shall provide the number of off-street loading spaces indicated in Table 11-8 Loading Space Requirements by Land Use. Requirements for uses not specifically listed shall be determined by the Director of Community Development based upon the requirements for comparable uses and upon the particular characteristics of the proposed use. For other standards (e.g., size of loading spaces, location, turning radius, etc.), refer to Article XI Off-Street Parking and Loading Standards, Division 4 Loading Area Regulations, in Municipal Code Chapter 30 Zoning and Development Code.

|                                                                                         | 10,001 - 30,000 sq ft: 1 space<br>30,001 - 90,000 sq ft: 2 spaces<br>Over 90,000 sq ft: 2 spaces; and 1 additional space for each<br>additional 50,000 sq ft over the initial 90,000 sq ft | Tractor Trailer |

**Table 11-8 – Loading Space Requirements by Land Use (continued)**

| <b>Land Use</b>                                       | <b>Loading Spaces (Minimum #)</b>                                                         | <b>Type (1)</b> |
|-------------------------------------------------------|-------------------------------------------------------------------------------------------|-----------------|
| Industrial Repair                                     | 5,000 - 30,000 sq ft: 1 space; and<br>1 additional space for each additional 30,000 sq ft | Truck           |
| Motor Vehicle                                         |                                                                                           |                 |
| • Motor Vehicle Rental, Sales, and Leases             | 1 space                                                                                   | Tractor Trailer |
| • Service Stations                                    | 1 space                                                                                   | Tractor Trailer |
| School, Commercial                                    | 1 space; and additional spaces required by design review                                  | Van             |
| <b>Distribution, Wholesaling and Warehousing Uses</b> |                                                                                           |                 |
| Warehousing Facilities                                | 5,000 - 30,000 sq ft: 1 space; and<br>1 additional space for each additional 30,000 sq ft | Tractor Trailer |

**Notes:**

- (1) A van loading space shall be a minimum of 12 ft wide by 19 ft long with a minimum 10 ft overhead clearance.  
A truck loading space shall be a minimum of 12 ft wide by 45 ft long with a minimum 14 ft overhead clearance.  
A tractor trailer loading space shall be a minimum of 12 ft wide by 70 ft long with a minimum 14 ft overhead clearance.

**E. Landscaping Standards for Parking Areas**

Within any parking area, one tree shall be planted for every five single-row parking stalls or 10 double-row parking stalls. Eighty percent of these shall be 15 gallons in size and the remaining 20 percent shall be 24-inch box or larger in size. If for some reason the contractor is unable to distribute trees in the interior of the parking area in compliance with these standards, the Director of Community Development may approve the placement of no more than 40 percent of the trees within the perimeter of the parking area. Planters shall not have a dimension less than four feet, excluding the thickness of the curbing. These requirements may be reduced for industrial parking areas that are screened from public view.

1. Parking areas shall contain a minimum landscape area equivalent to 30 percent of the total required 15 percent landscaping for the total site area.
2. Parking area perimeter landscaping.
  - a. Parking areas for nonresidential uses abutting or adjacent to residentially zoned property shall provide a landscape strip that is a minimum of 10 feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line bordering the residentially zoned property. Parking areas shall be screened from the residentially zoned property by a solid decorative masonry wall that is a minimum of six feet in height.
  - b. Parking areas for nonresidential uses abutting or adjacent to non-residentially zoned property or a street shall install a landscape strip that is a minimum of five feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line, or the parking area and the street right-of-way. This

requirement may be reduced or modified if a joint access agreement exists that is satisfactory to the Director of Community Development. Parking areas shall be screened from streets through combinations of plant materials, earth berms, raised planters, grade separations, or low walls. Slopes shall not exceed three to one or exceed 36 inches in height measured from the parking lot surface.

- c. Plant materials, walls, or structures within a traffic sight area shall not block sight lines from driveways to streets and shall not exceed 36 inches in height.
  - d. End of aisle spaces adjacent to landscape finger shall be two feet wider for step out area.
3. Parking area interior landscaping.
- a. Tree number and location. One tree shall be provided for each four parking spaces and shall be evenly spaced throughout the interior parking area at a rate of one tree for every eight parking spaces. See Exhibit 11-4 – Parking Lot Landscaping. The required number of trees in the interior area shall not include trees required around the parking area perimeter. Trees are not required for tractor-trailer parking. A minimum of one cluster of trees shall be provided for each 100 feet of a row or double row of parking spaces. Trees shall be located in planters that are bounded on at least two sides by parking area paving. Planters shall have a minimum exterior dimension of five feet.

Exhibit 11-4 – Parking Lot Landscaping.

- b. Tree size. All trees within the parking area shall be a minimum 24-inch box container at time of planting.
- c. Landscape protection. Landscaping shall be protected by concrete curbs of at least six inches in height. An end-of-aisle planter shall be provided at the ends of all parking aisles. Finger aisle planters shall be a minimum of nine feet wide and end-of-aisle planters shall be a minimum of seven feet wide, as measured from the inside of the curb. The parking space side of finger and end-of-aisle planters shall have a 24-inch wide concrete surface measured from the face of the curb. Planters shall be landscaped with a mixture of trees, shrubs, and ground cover. Planting areas shall have round corners instead of 90 degree corners and shall be shaped to

allow vehicle movements. The Director of Community Development may approve alternative barriers designed to protect landscaped areas from vehicle damage. Wheel stops may be placed to allow for two feet of vehicle overhang area within the dimension of the parking space. To increase the parking lot landscaped area, a maximum of two feet of the parking stall depth may be landscaped with low-growth, hardy materials in-lieu of paving, allowing a bumper overhang while maintaining the required parking dimensions. However, the overhang area shall not be counted as part of the minimum landscape area required by paragraph (1) above, and when adjacent to a required landscaping strip shall be in addition to the minimum required width. Fixtures (e.g., lights, sprinklers) that are higher than the curb are prohibited within a bumper overhang area. Curbing that creates a bumper overhang barrier shall not exceed a height of five inches.

- d. Parking areas with more than 100 spaces shall provide an appropriate entry feature consisting of a concentration of landscape elements, including trees, flowering plants, enhanced paving, and project identification.
4. Parking structures. A landscaping strip 10 feet wide shall be provided on all sides of a parking structure. One tree shall be provided for each 20 to 40 feet of perimeter of the structure, based on species selected. These trees shall be distributed evenly throughout the subject landscape area.

## 11.7 Sign Standards

### A. Applicability

This section contains standards and guidelines for signage to ensure that signs are consistent with the overall quality and character of anticipated new development. Regulations identify permitted sign types; provide standards for number of signs, size, and location; and provide design guidelines for color, materials, and illumination. Please refer to the Fontana Municipal Code for all sign-related information or regulations not specifically addressed in this section.

### B. Standards and Guidelines

1. Standards. The following standards shall apply to all signs, regardless of type:
  - a. Sign types not listed in this Section are not permitted.
  - b. Linear Frontage Ratio. For each establishment, one and one-half (1 ½) square feet of total sign area shall be allowed for each linear foot of building frontage ("Linear Frontage Ratio"). Unless otherwise noted, all signs (including temporary signs) shall count toward the total sign area permitted based on the Linear Frontage Ratio. For multi-tenant buildings, each establishment shall be calculated individually. For corner establishments, each facade shall be calculated individually. Permitted sign area based on the linear frontage of one establishment or facade shall not be placed on another establishment or facade.
  - c. Signs shall not be animated.
  - d. Commercial messages that identify, advertise, or attract attention to a business, product, service, or event or activity sold, existing, or offered elsewhere than upon the same property where the sign is displayed are expressly prohibited.
  - e. In the event of a conflict between this Section and any other City regulation, the provisions of this Section shall apply.
  - f. All issues not specifically addressed herein (e.g., signage in the public right-of-way, exempt signs, permit processing, etc.) shall be addressed pursuant to the Fontana Municipal Code.
2. Guidelines. The following guidelines shall apply to all signs, regardless of type.
  - a. Design Compatibility
    - Provide signage that is compatible with the building architecture and coordinate sign materials and colors with the building facade/storefront design.
    - Place signs in accordance with facade rhythm, scale, and proportion.

- Ensure that signs associated with multi-tenant buildings are complementary to one another. A consistent location for tenant identification signs is recommended.
- b. Location
  - Signs shall be placed at or near the public entrance to a building or main parking area to indicate the most direct access to the business.
  - Signs shall not be located so that they cover or interrupt the architectural details or ornamentation of a building's facade.
  - Signs shall not project above the edge of the rooflines and shall not obstruct windows and/or doorways.
- c. Sign Legibility
  - Avoid hard-to-read, intricate typefaces. Typefaces that are difficult to read reduce the sign's ability to communicate.
  - Avoid spacing letters and words too close together. Lettering shall not occupy more than 75 percent of the sign face.
  - Limit the number of lettering styles in order to increase legibility. Signs shall be limited to no more than two styles for small signs (generally up to 10 square feet) and three styles for larger signs.
  - Use significant contrast through incorporating light colored letters and a darker, contrasting background to provide the most visible and best-looking image.
  - Incorporate business identity symbols and logos.
  - Logo means any symbol or any combination thereof adopted and used by an individual or corporation to identify goods made or sold or services rendered by an individual or corporation and to distinguish them from goods made or sold or services rendered by others and that is nationally or State of California registered.
- d. Color and Materials
  - Bright day-glo (fluorescent) colors shall be avoided as they are distracting and do not blend well with other background colors.
  - Sign colors shall relate to and complement the materials or color scheme of the buildings, including accent and trim colors.
  - Sign materials shall be selected with consideration for the architectural design of the building's facade and also contribute to the legibility of the sign.
  - Construct signs of durable, high-quality materials.
  - Wood, paper, and cloth signs, and painted wall signs are prohibited.
- e. Illumination
  - Individually illuminated letters, either internally illuminated or back-lighted solid letters (reverse channel), are a preferred alternative to internally illuminated plastic-faced cabinet signs.

- Signs shall be comprised of individual letters.
- The use of backlit, individually cut letter signs is strongly encouraged for all types of business and signs, including monument-type signs.
- Whenever indirect lighting fixtures are used, care shall be taken to properly shield the light source.

f. Electrical Raceways and Conduits

- Electrical transformer boxes and raceways shall be concealed from public view.
- If raceways are necessary, they shall be as thin and narrow as possible and shall never extend in width or height beyond the area of the sign's lettering or graphics.
- All exposed conduit and junction boxes shall be appropriately concealed from public view.

### C. Sign Types

For the purposes of this plan, Table 11-9 Sign Types indicates the signs that are allowed in the Slover West Industrial District.

| Table 11-9 – Sign Types |                                                                                                              |
|-------------------------|--------------------------------------------------------------------------------------------------------------|
| 1                       | <b>Grand Wall Sign</b><br>Non-residential uses with unfenestrated wall areas of 2,000 square feet or greater |
| 2                       | <b>Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                              |
| 3                       | <b>Projecting Sign</b><br>Non-residential uses with a dedicated ground floor entrance                        |
| 4                       | <b>Awning Valance Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 5                       | <b>Awning Side Sign</b><br>Non-residential uses with a dedicated ground floor entrance                       |
| 6                       | <b>Canopy Fascia Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 7                       | <b>Under-Awning or Under-Canopy Sign</b><br>Non-residential uses with a dedicated ground floor entrance      |
| 8                       | <b>Recessed Entry Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 9                       | <b>Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                            |
| 10                      | <b>Temporary Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                  |
| 11                      | <b>Temporary Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                    |
| 12                      | <b>Monument Sign</b><br>Any building with continuous linear street frontage of 200 feet or greater           |
| 13                      | <b>Directional Sign</b><br>Each vehicle entrance                                                             |
| 14                      | <b>Accessory Sign</b><br>Identified specific uses                                                            |

## **D. Sign Type Standards and Guidelines**

This section provides Standards and Guidelines for each Sign Type.

### **1. Grand Wall Sign**

Grand Wall Signs are large signs located on, and parallel to, large unfenestrated building wall areas.

#### **a. Standards**

- i. A Grand Wall Sign shall only be located on unfenestrated wall areas of 2,000 square feet in size or greater.
- ii. Only one (1) Grand Wall Sign shall be permitted per establishment.
- iii. The Grand Wall Sign area shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. A Grand Wall Sign shall not exceed 1,000 square feet or 25 percent of the total wall area, whichever is less.
- v. Grand Wall Signs shall project no more than one (1) foot from the façade of the building.

#### **b. Commercial Guidelines**

- i. Materials used in Grand Wall Signs shall be wood, ceramic or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

#### **c. Industrial Guidelines**

- i. Materials used in Grand Wall Signs shall be ceramic or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

### **2. Wall Sign**

Wall Signs are signs that are located on, and parallel to, a building wall. Business Identification Wall Signs are signs that announce the name of a business within a building and Building Identification Wall Signs are signs that announce the name of a building. Both are located on, and parallel to, a building wall.

1) Grand Wall Sign.

a. Standards

- i. Wall Signs shall be located below the second floor and within the middle 50 percent of the building or tenant frontage measured from lease line to lease line. Building Identification Wall Signs shall be located only on the frieze or fascia (articulated banding across the top of every building floor) area of storefront level; frieze, fascia, parapet of the uppermost floor; or above the entrance to main building lobby.
- ii. No Wall Sign shall exceed 150 square feet in size. Building Identification Wall Signs shall be no taller than 24 inches in height.
- iii. Wall Signs shall count towards the total sign area permitted based on the Linear Frontage Ratio, except that the area of Building Identification Wall Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. Wall Signs shall project no more than one (1) foot from the façade of the building.

b. Commercial Guidelines

- i. Materials used in wall signs shall be wood, ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. New wall signs for individual businesses in a shopping center shall be placed consistent with the location of signs for other businesses in the center. This will establish visual continuity among storefronts and create a unified appearance for the center.
- v. When signs that are attached to a wall are removed, holes and other disfigurations of the wall's surface shall be patched and painted to match surrounding areas.

2) Building Identification Wall Sign.

2) Business Identification Wall Sign.

c. Industrial Guidelines

- i. Materials used in wall signs should be ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs should be inscribed into the façade or constructed of individual metal letters.
- ii. Wall signs shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only. Building Identification Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. When signs that are attached to a wall are removed, holes and other disfigurements of the wall's surface shall be patched and painted to match surrounding areas.

3. **Projecting Sign**

Projecting Signs are signs that are oriented perpendicularly to the building façade and are either (1) suspended under a bracket, armature, or other mounting device or (2) are cantilevered (i.e., structurally affixed to the building).

a. Standards

- i. Projecting Signs shall only be mounted on the wall area below the second floor.
- ii. No Projecting Sign shall exceed 16 square feet in size.
- iii. Projecting Signs shall project no more than four feet from the façade of the building.
- iv. No portion of a Projecting Sign shall be lower than eight feet above the level of the walkway over which it projects.

b. Commercial and Industrial Guidelines

- i. Projecting Signs that are suspended under a bracket, armature, or other mounting device shall be metal only and shall be illuminated by external illumination only.
- ii. Projecting Signs that are cantilevered signs shall be metal and illuminated by external illumination or halo illumination only.

3) Suspended Projecting Sign.

3) Cantilevered Projecting.

- iii. Sign supports and brackets shall be compatible with the design and scale of the sign and the architectural design of the building.

#### 4. ***Awning Valance Sign***

Awning Valance Signs are signs applied to the awning valance and are contained completely within the valance.

- a. Standards
  - i. Lettering for Awning Valance Signs shall include one (1) line of lettering not to exceed two-thirds (2/3) the height of the valance or 12 inches, whichever is less.
  - ii. Awning Valance Signs shall project no farther from the building than its associated awning.
  - iii. No portion of an Awning Valance Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial and Industrial Guidelines
  - i. Awning Valance Signs shall consist of metal, or vinyl or paint applied directly to the awning.
  - ii. Awning Valance Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

4) Awning Valance Sign.

#### 5. ***Awning Side Sign***

Awning Side Signs are signs applied to the side panel of an awning.

- a. Standards
  - i. The area of Awning Side Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - ii. Lettering for Awning Side Signs shall not exceed 12 inches in height with total sign area not to exceed 20 percent of the area of the awning side area.
  - iii. Awning Side Signs shall project no farther from the building than its associated awning.
  - iv. No portion of an Awning Side Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial and Industrial Guidelines
  - i. Awning Side Signs shall consist of vinyl or paint applied directly to the awning.
  - ii. Awning Side Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
  - v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
  - vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

5) Awning Side Sign.

## 6. *Canopy Fascia Sign*

Canopy Fascia Signs are signs that are mounted to the front or side fascia of a canopy and contained completely within that fascia.

- a. Standards
  - i. The height of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) the height of the fascia or 12 inches, whichever is less.
  - ii. The width of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) of the canopy width.
  - iii. Canopy Fascia Signs shall project no farther from the building than its associated canopy.
  - iv. No portion of a Canopy Fascia Sign shall be less than eight feet above the level of the walkway over which it projects.
  - v. Canopy Fascia Signs shall consist of only one (1) line of lettering articulated as individual letters mounted directly to the canopy.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Canopy Fascia Signs shall be metal and paint only.
  - ii. Canopy Fascia Signs shall be illuminated by external illumination only.

6) Canopy Fascia Sign.

7) Under-Awning Sign.

## 7. *Under-Awning or Under-Canopy Sign*

Under-Awning or Under-Canopy Signs are signs that are suspended under an awning or canopy, perpendicular to the building facade.

- a. Standards
  - i. Under-Awning or Under-Canopy Signs shall be located adjacent to a public entrance.
  - ii. No more than one (1) Under-Awning or Under-Canopy Sign shall be permitted per establishment per façade.
  - iii. The area of Under-Awning or Under-Canopy Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - iv. Under-Awning or Under-Canopy Signs shall not exceed three (3) square feet in area.

7) Under-Canopy Sign.

- v. Under-Awning or Under-Canopy Signs shall project no farther from the building than its associated awning or canopy.
- vi. No portion of an Under-Awning or Under-Canopy Sign shall be less than eight feet above the level of the walkway over which it projects.
- b. Commercial Guidelines
  - i. Materials used in Under-Awning or Under-Canopy Signs shall be wood, metal, and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
  - i. Materials used in Under-Awning or Under-Canopy Signs shall be metal and paint only.
  - ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.

#### **8. Recessed Entry Sign**

Recessed Entry Signs are signs that are oriented parallel to the building façade and that are suspended over a recessed entry.

- a. Standards
  - i. No Recessed Entry Sign shall exceed twenty (20) square feet in size.
  - ii. Recessed Entry Signs shall not project beyond the façade of the building.
  - iii. No portion of a Recessed Entry Sign shall be lower than eight feet above the level of the walkway.
- b. Commercial Guidelines
  - i. Materials used in Recessed Entry Signs shall be wood, metal, and paint only.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
  - i. Materials used in Recessed Entry Signs shall be metal and paint only.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.

8) Recessed Entry Sign-Section View.

8) Recessed Entry Sign-Elevation View.

## 9. Window Sign

Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window.

- a. Standards
  - i. Window Signs shall be permitted on windows below the second floor level only. A Window Sign that only identifies a building shall be located on a transom window above a primary entrance, or the glazed area of primary door.
  - ii. Window signs shall count towards total sign area permitted based on the Linear Frontage Ratio, except that the area of a Window Sign that only identifies a building shall not count towards the total sign area permitted based on the Linear Frontage Ratio. One (1) Window Sign that only identifies a building shall be permitted per building per street-facing façade.
  - iii. No more than 25 percent of any individual window area shall be covered or otherwise occupied by signage.
  - iv. The letter height of each Window Sign shall not exceed 12 inches and shall be taller than four inches.
- b. Commercial and Industrial Guidelines
  - i. Ground-floor Window Signs shall consist of vinyl or paint applied to the glass, neon mounted or suspended behind the glass, or framed and mounted paper signs. Window Signs that only identify a building shall consist of vinyl or paint applied to the glass only.
  - ii. Ground floor Window Signs shall not be illuminated.

## 10. Temporary Window Sign

Temporary Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window and are designed, constructed, and intended for display on private property for a period of not more than 90 consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal signage.

9) Window Sign – Business Identification.

9) Window Sign – Building Identification.

a. Standards

- i. Temporary Window Signs shall be located only on ground floor windows on building facades that face a public street or a parking lot.
- ii. Temporary Window Signs shall not exceed six square feet in size.
- iii. Temporary Window Signs shall not cause the total amount of the window area covered with signage to exceed 25 percent.
- iv. Temporary Window Signs that satisfy the above standards and General Standards do not require a permit.

b. Commercial and Industrial Guidelines

- i. Temporary Window Signs shall be constructed of paint applied directly to the glass or framed paper signs placed behind the glass.
- ii. Temporary Window Signs shall not be illuminated.
- iii. Temporary Window Signs that satisfy the above guidelines and General Guidelines do not require a permit.

10) Temporary Window Sign.

**11. Temporary Wall Sign**

Temporary Wall Signs are signs that are located on, and parallel to, a building wall and are designed, constructed, and intended for display on private property for a period of not more than ninety (90) consecutive days per year. Examples include "grand opening", "special sale," and seasonal temporary banner signage.

a. Standards

- i. Temporary Wall Signs shall only be mounted on a wall area below the second floor level that faces a public street or a parking lot.
- ii. A maximum of one (1) Temporary Wall Sign is allowed per establishment.
- iii. No Temporary Wall Signs shall exceed 32 square feet in area.
- iv. Temporary Wall Signs shall project no more than one (1) foot from the façade of the building.

11) Temporary Wall Sign.

- b. Commercial and Industrial Guidelines
  - i. Materials used in Temporary Wall Signs shall consist of a flexible vinyl material with grommet holes installed around the edges to accommodate attachment to a building.
  - ii. Temporary Wall Signs shall not be illuminated.

## 12. Monument Sign

A Monument Sign is a freestanding sign supported by a solid architectural element at its base.

- a. Standards
  - i. A maximum of one Monument Sign is allowed per street frontage for single-purpose buildings, multi-tenant buildings or complexes and shopping centers on a -parcel with one or more street frontages of at least 100 feet.
  - ii. A Monument Sign shall not exceed eight feet in length or six feet in height.
  - iii. Monument Signs shall be placed perpendicular or parallel to the street. The base of a Monument Sign shall be set back a minimum of five feet from any public right-of-way or interior property line; a minimum of 10 feet from the edge of a driveway; and a minimum of 50 feet and from any Monument Signs or Pylon Signs on adjoining sites. Monument Signs shall not block sight lines at entry driveways and circulation aisles.
  - iv. The sign copy for a Monument Sign shall only identify the name of the center, complex, or building and the address; however, the name of the primary tenant, if any, may be included in the copy. The minimum letter size allowed shall be six inches. Sign copy shall not be located closer than one half-letter height to the sign edge or other line of copy. Between 5 to 10 percent of the sign area should be dedicated to identification of the street address.
  - v. The area of Monument Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - vi. Monument Signs shall not project over any on-site driveway or vehicle circulation area.
  - vii. Landscaping with automatic irrigation shall be provided at the base of the supporting structure equal to twice the area of one face of the sign or 75 square feet, whichever is greater. For example, 40 sq. ft. of sign area = 80 sq. ft. of landscaped area.

12) Monument Sign.

- b. Commercial and Industrial Guidelines
  - i. Monument Signs may be illuminated, however the sign copy should be the only portion of the sign face that is illuminated. The sign background or field shall be opaque with a nonglossy, nonreflective finish.
  - ii. The sign area and height of the sign shall be in proportion to the site and surrounding buildings. Signs shall not be overly large so as to be a dominant feature of the site.
  - iii. Monument Signs shall incorporate architectural elements, details, and articulation as follows:
    - Provide a solid architectural base that supports the sign. The base shall be a minimum of one-foot in height.
    - Provide architectural elements on the sides and top to frame the sign pane(s). Use columns, pilasters, cornices, and similar details to provide design interest.
    - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
    - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with its adjacent building(s).

### **13. Directional Sign**

A Directional Sign is an on-premise sign giving directions, instructions, or facility information of an establishment (e.g., parking signs, exit and entrance signs, etc.).

- a. Standards
  - i. One (1) directional sign for each vehicle entry to a site with a maximum area of three square feet per sign. Maximum sign height shall be four feet. Additional directional signs may be allowed with approval of a Comprehensive Sign Program.

13) Directional Sign.

- b. Commercial and Industrial Guidelines
  - i. Directional signs and their supports shall use the same color palette of the proposed building.
  - ii. Directional signs shall be located to maintain sight lines along major circulation routes and shall be illuminated for visual clarity and safety.
  - iii. Directional signs shall be designed with easy-to-read fonts, contrasting colors from the surrounding support panels, and durable materials.
  - iv. Double-sided parking directional signs shall incorporate messaging and direction arrows on both sides of sign.
  - v. Parking directional signage shall be used consistently throughout each individual development.

#### 14. Accessory Signs

Accessory Signs are signs that provide incidental information about a project site or a business and its goods or services. For the purposes of this plan, Accessory Signs include:

- Directory Sign. A sign listing the tenants or occupants of a building or building complex.
- Nameplate Sign. A sign indicating the name and/or address of a building or occupant.
- Restaurant Menu Sign. Menus displayed on the exterior premises of a restaurant.

14) Accessory Sign.

- a. Standards
  - i. The area of Accessory Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - ii. Directory Signs: Limited to a total sign area of 10 square feet.
  - iii. Nameplate Sign: One non-illuminated sign not to exceed one square foot in area.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Accessory Signs shall be wood and metal.
  - ii. Accessory Signs shall be illuminated by internal or external illumination as appropriate.

### **11.8 Public Right-of-Way Streetscape**

This section establishes standards for streetscape landscaping improvements within the public rights-of-way along the major highways, primary highways, and secondary highways as identified in the General Plan, Circulation Master Plan, as well as district gateway/intersection enhancements. The intent of these streetscape improvement concepts and gateway enhancements is to provide a “sense of place” or identity, while interweaving the standards and tree palettes that may be provided by any overriding City Master Street Tree Plan.

#### **A. Street Classifications**

Streets within the SWD are classified as follows:

1. Major highways:
  - a. Six-lane major highway – Cherry Avenue.
  - b. Modified six-lane residential adjacent major highway – none within SWD.
  - c. Modified six-lane no median major highways – none within SWD.
  - d. Eight-lane major highways – none within SWD.
2. Primary highways – Mulberry Avenue and Slover Avenue.
3. Secondary highways – Santa Ana Avenue.
4. Collector streets – Almond Avenue, Banana Avenue, and Calabash Avenue.

#### **B. General Design Guidelines**

1. Landscaping should be used to accentuate and frame important view corridors.
2. Landscaping shall employ a common three-tiered approach to design:
  - a. Trees
  - b. Shrubs, vines and tall grass-like materials
  - c. Groundcovers (does not include turf)
3. Landscaping should be consistent and accentuated along arterial corridors and gateway intersections to emphasize district areas.
4. Street trees on major highways and primary highways shall consist of on-center planting of deciduous trees in medians (whenever medians are required) and evergreen trees in parkways to provide seasonal variations of views during fall and winter months (clearer air and snow-capped peaks).
5. Secondary highways shall provide single species of evergreen trees planted in parkways.

6. Gateway intersection enhancements should incorporate the adjacent property tree species (used in buffer setback) in order to provide background and screening, and be enhanced with accent trees selected for their character and shape.
7. Primary and secondary gateways will include thematic monumentation for district identification and reflect elements of local identity (i.e. river rock, concrete, City logo, etc.).
8. All gateway intersection enhancements shall incorporate decorative paving at corner areas and plant materials that promote the best of water-efficient landscaping.

### **C. Streetscape Concept**

The Streetscape Concept Plan for the entire Specific Plan area is shown on Exhibit 11.4. The plan identifies major, primary, and secondary highways, as well as collector streets and the gateway intersections within the Specific Plan area. Roadway classifications are consistent with the General Plan, Circulation Master Plan.

1. **Major Highway Streetscape.** Major highway streetscapes define the image of the City and its districts, while providing arterial linkages within and beyond the City. There are four streetscape concepts for major highways: Six-Lane Major Highway, Modified Six Lane No Median Major Highway, Modified Six Lane Residential Adjacent Major Highway, and Eight-Lane Major Highway. These major highway streetscapes are designed in response to special design needs, right-of-way, and adjacencies. The only major highway within the SWD is Cherry Avenue. A streetscape cross-section is shown in Exhibit 11-6.
2. **Primary/Secondary Streetscape.** Primary/Secondary highway streetscapes define the areas within the Specific Plan and its districts, and connect to the major thoroughfares throughout the City. Primary highways within the SWD are Mulberry Avenue and Slover Avenue. The only secondary highway in the SWD is Santa Ana Avenue. Streetscape cross-sections for these streets are shown in Exhibits 11-7 and 11-8.

City of Fontana Southwest Industrial Park (SWIP) Specific Plan Streetscape Concept Plan

Exhibit 11-5 – Streetscape Concept Plan

Exhibit 11-6 – Major Highway – 6 Lanes – Cross Section C-C (Cherry Avenue)

Exhibit 11-7 – Primary Highway – 4 Lanes – Cross Section D-D (Mulberry Avenue and Slover Avenue)

Cross Section E-E  
Secondary Highway - 4 Lanes (Santa Ana Avenue)  
\*Santa Ana Avenue will have bike lanes.

Exhibit 11.8 – Secondary Highway – 4 Lanes – Cross Section E-E (Santa Ana Avenue)

### **3. Gateways**

#### **A. Concept Plan**

The Streetscape Concept Plan Exhibit 11-4 identifies a hierarchy of primary, secondary, and tertiary gateways. The intent of the gateway intersection enhancements is to provide a visual statement that you are within the Specific Plan area.

The gateway intersection enhancements should all incorporate uniform treatments (to varying degrees) within expanded corner setback areas (45 degree diagonal ROW). Depending on the hierarchy level, each gateway shall include special corner/sidewalk paving, planting schemes that highlight drought tolerant species, and monumentation signage. Monument signs are optional on tertiary gateway intersections.

Each corner planting scheme shall incorporate the three-tiered planting concept, consisting of accent trees, shrubs, or tall grass-like plant material, and a ground cover. Dense planting of evergreen tree species consistent with adjacent buffer setback plantings shall provide a background/screen for each corner setback area.

Gateway conceptual designs with typical dimensions (plan views) are illustrated in Exhibits 11-11-9, and 11-10. The monument sign concept as it would appear in front of the planting treatment is illustrated in Exhibit 11-11.

Gateway enhancements and monument sign enhancements shall meet the City's line of sight regulations, as determined by the City Engineer. Dimensions of monument signs shall comply with Section 11.6.D.12.

#### **B. Dedication and Maintenance of Gateway Intersection Enhancements**

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for gateway intersection enhancements in Section 6.8.B Public Right-of-Way Streetscape-Gateways, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standards indicated in Section 6.8., Public Right-of-Way Streetscape; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.
  - c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure

the installation and perpetual maintenance of the gateway intersection enhancements.

### ***11.9 Design Guidelines***

#### ***A. Design Objectives***

The Design Guidelines will promote and reinforce the City's commitment to high quality development. In general, the guidelines are intended to ensure that development preserves or improves the positive characteristics of the City's image. The objectives of these guidelines are to:

- Promote orderly development by implementing the SWIP Specific Plan objectives, policies, and principles found in Chapter 2 Policy Framework.
- Protect and enhance property values by ensuring that development fits properly within the context of its surroundings and does not negatively impact adjacent uses.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian and motor vehicle circulation within a project and convenient pedestrian linkages to and from adjacent residential, commercial, industrial, and school areas.

#### ***B. Design Intent***

The design intent of the SWD is to provide for high-quality industrial, warehousing and logistics developments that utilize innovative architectural and site design. Important considerations in design of development within the SWD are the interface with adjacent commercial and residential areas balanced with the functional needs of the uses within the district.

#### ***C. Industrial, Distribution, and Business Park Uses***

The design guidelines in this Subsection shall apply to all industrial, distribution, and business park development within this land use district.

## 1. Site Design

### Site Layout

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public realm.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street.
  - Parking in front of building with a landscape buffer between parking and street. **See Figure 1.**

Figure 1. Appropriate building and landscape placement adjacent to public street.

- Visitor parking may be located at the front of the building adjacent to the main entry while employee parking and service areas are located at the sides and rear of the building. **See Figure 2.**

Figure 2. Parking layout.

- Service and loading should not be located on building side(s) adjacent to a public street.
- When buildings abut residential properties, parking and loading areas shall be located at the side of the building instead of the rear. The rear setback area shall be fully landscaped. **See Figure 3.**
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal is prohibited.
- Noise generating activities and storage areas shall be located as far as possible from adjacent properties, especially residential zones. Sound attenuation walls shall be used where appropriate to reduce noise.
- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. **See Figure 4.**

Figure 3. Fully landscaped setback adjacent to residential.

Figure 4. Appropriate location of loading areas.

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.).
- Business park development should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

## 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets. **See Figure 5.**
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest. **See Figure 6.**
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between sensitive uses (i.e. residential, parks, etc.) and outdoor work areas, loading and storage.

Figure 5. Buildings are oriented to create gateway into development.

Figure 6. Buildings are oriented to provide architectural features visible from the public right-of-way.

## 3. Site Elements

### Fences and Walls

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way. **See Figure 7.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.

Figure 7. Tubular steel and stone pillars are appropriate fencing materials.

- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall. **See Figure 8.**
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti. **See Figure 8.**

### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 9.**
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from public view. **See Figure 10.**

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 11.**

Figure 8. Wall is articulated with pillars and incorporates landscaping at the base and vines to deter graffiti.

Figure 9. Appropriate placement, orientation and screening of service areas.

Figure 10. Screening of roof mounted equipment.

- Trash enclosures shall integrate horizontal screening such as trellises. **See Figure 11.**

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and adjacent to residential zones, and to prevent light spillover onto adjacent properties. **See Figure 12.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 13.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building. **See Figure 14.**
- Truck and truck trailer storage areas shall incorporate lighting to increase real and perceived security.

Figure 11. Trash enclosures with architectural screening elements.

Figure 12. Hooded light fixture directs light downward.

Figure 13. Bollard lighting along pedestrian walkway.

Figure 14. Decorative light fixtures.

#### 4. Parking and Access

##### Parking

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts. **See Figure 15.**
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 15.**

Figure 15. Parking lot landscaping.

- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 16.**

Figure 16. Pedestrian circulation is consistent along perimeter of parking lot.

- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 17.**

### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts. **See Figure 18.**

Figure 17. On-site stormwater capture system.

Figure 18. Shared parking access.

- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 19.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

Enhance project entries with landscaping and special paving for visual impact.

Figure 19. Entry drive.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses..
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 20.**

### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest. **See Figure 21.**
- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 22.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 23.**

Figure 20. Incorporation of vertical offsets and material changes.

Figure 21. Façade articulation.

Figure 22. Use of cornices, window trim and grooves.

Figure 23. Enhanced corner elements.

- The orientation of windows in buildings adjacent to residential zones shall preclude a direct line of sight into residential properties.
- Primary building entries shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a building's entry. **See Figure 24.**

Figure 24. Articulated Entries.

- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 25.**
- Locate and/or screen rooftop equipment so that it is not visible from the street. Rooftop screening shall be integral to the building's form.

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.

Figure 25. Offset roof planes.

- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color. **See Figure 26.**
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.
- Use of metal as the primary building façade material is subject to approval of a conditional use permit by the Planning Commission.

Figure 26. Use of expansion joints.

## 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) ground cover and flowering plants;
  - 2) shrubs and vines; and
  - 3) trees.

**See Figure 27.** See Recommended Plant Palette in Section 11.8.

Figure 27. Three-tiered planting system: trees, shrubs, and ground covers.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. Incorporation of public art is highly encouraged.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection.

- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls. Water features and public art are also encouraged. **See Figure 28.**
- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 29.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction. **See Figure 30.**

Figure 28. Plaza area.

Figure 29. Wall incorporates landscaping to soften appearance and deter graffiti.

Figure 30. Plant material along buffer wall.

- Landscaping and trellises with vines are encouraged be used for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to residential zones shall include dense landscaping to provide visual screening and noise abatement.

Figure 31. Landscaped berms.

- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 31.**

- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area. **See Figure 32.**
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/storm water treatment features and bio-swales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 33.**
- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.

Figure 32. Landscaped parking lot.

Figure 33. On-site water filtration.

- Informal tree masses should be planted in a mix of sizes.

#### D. Commercial Uses

##### 1. Site Design

##### Site Layout

- The arrangement of multiple buildings and associated circulation and parking shall reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas that enhance publicly-accessible spaces. **See Figure 34.**
- Loading areas, access and circulation driveways, trash enclosures, storage areas, and rooftop equipment shall be located as far as possible from adjacent residences.
- Buildings may be located adjacent to the street with a fully landscaped setback or buildings may be set back with limited parking in front. **See Figure 35.**

Figure 34. Site plan emphasizes pedestrian connectivity.

Figure 35. Limited parking adjacent to street with landscape setback.

## Courtyards and Plazas

- The organization and design of buildings shall encourage and facilitate pedestrian activity.
- Buildings should be organized to create usable open space, courtyards, plazas and dining areas. **See Figure 36.**
- Pedestrian-oriented open spaces, courtyards and plazas shall include a focal element such as a sculpture and/or water feature and sitting areas. **See Figure 37.**

### 2. Building Orientation

- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Commercial buildings on corner parcels shall establish a strong tie to both streets and should encourage pedestrian activity at corner locations. **See Figure 38.**
- Buildings associated with service retail and restaurant uses shall be pedestrian-scaled, with entries fronting onto streets, plazas or courtyards to reinforce pedestrian orientation.
- Commercial development shall be oriented away from residential streets. At corner locations, if the side street primarily serves a residential neighborhood, development and access shall be oriented away from the side street.

Figure 36. Buildings create courtyard.

Figure 37. Open plaza areas with seating.

Figure 38. Commercial/retail buildings on corners should establish strong tie to the street.

- Buildings adjacent to sensitive uses shall be buffered. This may be accomplished by providing masonry walls, landscaped berms, appropriate building orientation, building height stepbacks and limitations on activities adjacent to sensitive uses. **See Figure 39.**

Figure 39. Masonry wall and landscaping separates uses.

- To protect residential privacy and reduce the visual mass of commercial buildings adjoining a residential zone, the commercial building shall be set back and oriented away from the residential zone.
- Commercial and retail buildings should generally be placed at or near setback lines with developments oriented in a manner that will provide visual interest.
- Buildings should be oriented in a manner that takes advantage of passive solar design to the maximum extent feasible.

### 3. Site Elements

#### Fences and Walls

- Wall heights and surfaces shall be articulated with varying façade depths or pilasters to promote architectural interest, and may include a cap along the top of the wall. **See Figure 40.**
- Walls visible from public streets shall be decorative and complement the design of on-site buildings.
- Wall and fencing materials may consist of brick, stone, stucco, wrought iron or tubular steel. Wall and fencing colors should match building colors, with neutral earth tones. **See Figure 41.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

Figure 40. Wall incorporates pilasters and cap.

Figure 41. Stone wall.

#### Screening

- Service and delivery areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 42.**
- Outdoor mechanical equipment should be screened from public view.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. **See Figure 43.**

Figure 42. Screened delivery area.

Figure 43. Screening of roof-mounted equipment.

## Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site.
- Trash enclosures visible from the public view shall integrate horizontal screening such as trellises.

## Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and adjacent to residential zones, and to prevent light spillover into adjacent properties. **See Figure 44.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 45.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures. **See Figure 46.**

Figure 44. Hooded light fixture directs light downward.

Figure 45. Bollard lighting along pedestrian walkway.

Figure 46. Pole mounted light.

- Decorative light fixtures are encouraged, as long as fixtures are consistent with the architectural design of the building. **See Figure 47.**

#### 4. Parking and Access

##### Parking

- Parking lots should be designed with a clear hierarchy of circulation: major access drives with no direct access to parking spaces; major circulation drives with little or no parking; and parking aisles for direct access to parking.
- Large commercial and retail parking areas should be located behind building facades so as not to be visible from major streets.
- Parking lots shall not be the dominant visual element on the site.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 48.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat gain and the visual impacts of large parking areas.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 49.**
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 50.**

Figure 47. Decorative light fixtures.

Figure 48. Landscaped parking lot.

Figure 49. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 50. On-site storm water capture.

### Access - Vehicular

- Site access shall promote safety by providing an adequate stacking distance for vehicles between the back of the sidewalk and the first parking stall or circulation aisle.
- Conflict between vehicles and pedestrians shall be avoided at access driveways by providing a walkway on at least one side of the driveway.
- The number of access driveways shall be minimized and located as far as possible from street intersections.
- Site access locations shall be coordinated with existing or planned median openings and driveways on the opposite side of the roadway.
- Unobstructed line of sight at corners and driveways shall be provided to reduce vehicular conflicts. **See Figure 51.**
- Avoid placing primary vehicle access in close proximity to major building entrances in order to minimize pedestrian and vehicular conflicts. **See Figure 52.**

Figure 51. Unobstructed sight lines.

Figure 52. Vehicle access is placed away from building entrances.

### Access - Pedestrian

- Clearly defined pedestrian walkways or paths should be provided from parking areas to primary building entrances. Clear and convenient pedestrian access shall be provided between the public sidewalk and the pedestrian areas of the development. **See Figure 53.**

Figure 53. Clearly defined pedestrian walkways.

- Raised walkways, decorative paving, landscaping and/or bollards shall be used to separate pedestrian paths from vehicular circulation areas. **See Figure 54.**
- Parking areas should be designed so that pedestrians walk parallel to moving cars. **See Figure 55.**

### Loading and Delivery

- Loading and delivery service areas shall be located and designed to minimize their visibility, circulation conflicts, and adverse noise impacts to the maximum extent feasible.
- Loading and delivery service areas shall be screened with portions of the building, architectural wing walls, freestanding walls or landscape planting.
- When commercial buildings abut a residential zone, loading areas shall not be visible from adjacent residentially-zoned properties.
- Loading areas shall be designed to not interfere with circulation or parking, and to permit trucks to fully maneuver on the property without backing from or onto a public street. **See Figure 56.**
- Service, loading and delivery areas should take access from planned shared access points to reduce curb cuts along project frontages.

## 5. Architecture

### Mass and Scale

- The mass and scale of new infill developments shall be compatible with the existing, adjacent structures. This can be accomplished by transitioning from the height of adjacent buildings to the tallest elements of the new development by stepping back the upper portions of taller buildings.

Figure 54. Raised walkway and landscaping in parking lot.

Appropriate

Inappropriate

Figure 55. Pedestrian circulation

Figure 56. Loading area placed behind building outside of circulation lanes.

- Human-scale elements, such as pedestrian-scaled doors, windows and building modules shall be used to emphasize pedestrian orientation.
- The size and location of various building elements (e.g., roofs, parapet walls, wing walls, etc.) shall be in scale to the building as a whole and provide visual interest. **See Figure 57.**

### Building Facades

- Buildings shall include enhanced and articulated facades along public streets.
- Design details shall be continued or repeated upon all building elevations.
- Building entrances should be readily identifiable. The use of recesses, projections, columns, and other design elements to articulate entrances are encouraged. **See Figure 58.**
- Facades shall provide visual interest with vertical and horizontal variations in wall and roof planes, building projections, door and window bays, arcades, and similar elements/techniques. **See Figure 59.**
- Buildings shall undergo a break in façade approximately every 40 feet, to create a varied wall surface along public areas. Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale should be considered for the remainder of the building spanning public right-of-way frontage.
- Buildings should include vertical elements (e.g., clock tower, building articulation) that create points of visual interest when viewed from the public right-of-way.

Figure 57. Building elements add visual interest.

Figure 58. Building Entry.

Figure 59. Horizontal and vertical articulation.

- Roof designs that are visually interesting and designed to completely screen all rooftop equipment from public streets are required. **See Figure 60.**
- The location of windows in commercial buildings adjacent to residential zones shall preclude a direct line of sight into residential properties.
- Buildings should use large windows along walls and skylights in rooftop designs to capture natural light during operating hours.
- The interior areas of commercial development should have shaded or covered walkways.

Figure 60. Full roof screens all equipment and provides visual interest.

### Storefronts

- Storefronts shall be comprised predominantly of transparent surfaces (windows). **See Figure 61.**
- The use of clear glass (on the first floor) is strongly encouraged.
- Storefront windows shall be large and a minimum of 24 inches off the ground. The maximum bulkhead (wall plane between the ground and the bottom of the windows) height should be approximately 36 inches.
- Storefront entries should promote a sense of entry into the structure as well as provide a sense of shelter by incorporating elements such as overhangs, canopies, awnings, and recesses. **See Figure 62.**
- If security grilles are necessary, they shall be placed inside the building behind the window display area at a minimum distance of two feet behind the window.
- Product storage racks shall not block views through storefront windows.

Figure 61. Storefront windows.

Figure 62. Storefront overhangs provide a sense of shelter and entry.

## Colors and Materials

- The use of a coordinated three-color palette for the base color and major and minor trim accents is encouraged.
- Colors for all structures on-site should be varied and should consist of neutral, earth tones. **See Figure 63.**
- Exterior finish materials shall be appropriate for the architectural style and/or theme of the entire development and should contribute towards a high quality image. **See Figure 64.**
- Changes in materials shall occur at inside corners to make building volumes appear substantial. **See Figure 65.**
- Materials shall be varied to provide architectural interest, however, the number of materials shall be limited and not exceed what is required for contrast and accent of architectural features.
- Exterior materials and architectural details shall relate to each other in ways that are traditional and logical. For example, heavy materials should appear to support lighter ones. See Figure 65.

## 6. Landscaping

### Plants and Irrigation

- Landscaping should help complete the design of the site and enhance the quality of commercial developments by framing and softening the appearance of buildings, screening undesirable views, and buffering incompatible uses.

Figure 63. Use of neutral, earth tones.

Figure 64. Exterior finish materials.

Figure 65. Heavy materials at base of building with lighter materials above.

- Landscaped areas should generally incorporate planting utilizing a three tiered system:
  - 1) ground covers (including flowering plants—annuals and perennials),
  - 2) shrubs and vines, and
  - 3) trees.

**See Figure 66.**

Figure 66. Example of three tier landscape system.

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. **See Figure 67.**
- Planting materials shall be used in plazas or gathering areas to provide shade and soften the appearance of hard surfaces. Water features and public art are also encouraged in these places. **See Figure 68.**
- Trees located along street frontages shall be selected to match or complement existing or proposed street trees in the public right-of-way.
- A minimum five-foot landscape strip shall be used along circulation aisles in parking lots, and along building side/rear elevations if a walkway is not used. A landscape strip is also encouraged in nonpublic areas and service areas between pavement and buildings.
- On-site water filtration features and bio-swales are strongly encouraged, and can also be used as buffering methods for adjacent businesses.
- Drought tolerant and low-water trees, vines, and groundcovers shall be used on-site. When feasible, drip irrigation systems shall be installed to provide on-site vegetation with appropriate irrigation and ensure the highest possible volume of water conservation.

Figure 67. Highlighting entry points.

Figure 68. Public plaza area within commercial development incorporates water feature.

- Planting materials shall be used to provide a buffer against noise, and may be integrated with walls or fences to achieve desired sound reduction and appearance.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

#### Site Furniture

- Outdoor furniture and fixtures (e.g., lighting, directional signs, trellises, raised planters, works of art, benches, trash receptacles, fencing, etc.) shall be integral elements of the building and landscape design. **See Figure 69.**
- Outdoor furniture shall be of a sturdy construction to withstand daily use. Wood should be avoided.
- Outdoor furniture shall be located so it will not conflict with the pedestrian and motor vehicle circulation patterns. **See Figure 70.**
- Outdoor seating should be shaded.

Figure 69. Trellis.

Figure 70. Outdoor furniture outside of pedestrian walkway.

## Paving

- Decorative paving shall be incorporated into courtyards, plazas, pedestrian walkways, and crosswalks. **See Figure 71.**
- Paving materials shall complement the architectural design of the building and landscape design of the project. The use of stamped concrete, stone, brick, permeable pavers, exposed aggregate, or colored concrete is encouraged. The use of slippery materials (e.g., polished marble or granite) is prohibited.

Figure 71. Enhanced paving in pedestrian areas.

## E. Special Commercial Uses

### 1. Drive-Through Uses

#### Site Design

- The predominant feature along the street frontage shall be the building, not parking lots or the drive-through aisle.
- The building shall be located to maximize the distance for vehicle queuing while screening the drive-through operations. **See Figure 72.**
- When adjacent to residential zones, outdoor order kiosks, loading/unloading areas, and storage areas shall be located as far as possible from residential properties.
- Drive-through aisles shall be located in the rear of the building away from the street frontage whenever possible. If the drive-through aisle is located between the building and the street, dense landscaping and landscaped berms or a screen wall (42 inches high or less) shall be provided to screen the drive-through aisle from street view. **See Figure 73.**

Figure 72. Vehicle queuing.

Figure 73. Example of appropriately landscaped and screened drive-through aisle.

## Building Design

- All building elevations shall receive the same level of architectural detailing.
- Buildings shall incorporate roof designs with built-in equipment wells or other built-in screening methods, so that screening devices do not appear added-on.
- If the drive-through facility is a pad building within a shopping center, the architecture shall relate to and be compatible with the design of the center. The only feature that identifies the franchise shall be the company's logo and signs.

## 2. Mini-Storage Facilities

### Site Design

- Offices and customer service areas shall be located adjacent to the street frontage to provide convenient access and help visually break up the front façade.

### Building Design

- Long, flat, unarticulated walls shall be avoided along street frontages. **See Figure 74.**
- Building walls and screen walls shall incorporate substantial articulation, and changes in plane and height to add visual interest.
- A minimum of two different building materials shall be used on building walls and screen walls adjacent to street frontages (e.g., stucco, brick, stone).
- Building materials, textures and landscaping shall be chosen to deter graffiti.

Figure 74. Articulated wall of mini-storage facility.

### 3. Parking Garages

#### Site Design

- Where appropriate, parking garages should incorporate ground floor retail adjacent to the public sidewalk. **See Figure 75.**
- A minimum 5-foot wide landscaped strip shall be provided on all sides of the parking structure except where ground floor retail space is provided.

Incorporate retail or other compatible uses on ground floor whenever possible.

Figure 75. Liner shops.

#### Building Design

- Parking garages shall be designed to help reduce the mass and scale of the garage and to ensure their compatibility with surrounding uses.
- Conceal view of vehicles in the garage through a combination of screen walls and plantings. **See Figure 76.**
- Avoid a monolithic appearance. This can be accomplished as follows:
  - Minimize horizontal and vertical banding by balancing both horizontal and vertical elements.
  - Use simple, clean geometric forms, and coordinated massing.
  - Step back upper levels of the garage 5 to 10 feet above the first floor. **See Figure 77.**
- Coordinate openings in the parking garage with the size and modulation of adjacent windows, structural bays, and storefronts if the parking garage contains other uses.
- Size openings in the parking garage to resemble large windows as in an office building.

Figure 76. Parking structure with landscaping.

Figure 77. Horizontal and vertical articulation breaks up parking structure elevation.

- Use masonry materials that are predominantly light in color, but avoid unpainted concrete.
- Avoid a sloping ramp appearance by providing level and uniform wall planes between floors.
- Visually define and differentiate between pedestrian and vehicular entrances through appropriate architectural detailing. **See Figure 78.**

### Access and Circulation

- Vehicle stacking areas for entering and exiting traffic shall be sufficient in length to minimize traffic backup into surrounding streets or within the garage. A minimum of two vehicle lengths of stacking distance shall be provided between the back of the sidewalk and the control gate.
- One inbound lane shall be provided for a garage with a capacity of up to 500 vehicles. At least two inbound lanes shall be provided for garages with a capacity of more than 500 vehicles.
- The maximum aisle length shall not exceed 400 feet without providing a cross aisle.
- Ramp grades shall not exceed 10 percent and parking areas should not exceed a slope of four to five percent.

### Security and Lighting

- The design of the garage shall eliminate possible hiding places and openings that could allow random pedestrian access.
- During periods when parking activity is substantially less than the garage capacity (i.e., during night operations), there shall be a means of securing unused parking levels from use, including stairwells and elevators. If the garage is not operated on

Figure 78. Paving differentiates between pedestrian and vehicular entries.

a 24-hour basis the entire facility shall be secured from access during hours when the facility is closed.

- For security reasons, at least one or two sides of the stair tower shall include glass running vertically the height of the tower. Elevators shall be provided with glass-back cabs and shafts. **See Figure 79.**
- Stairs and elevators shall be located adjacent to a street on the exterior of the structure where lobbies can be exposed to outside view.
- The use of security cameras is required.
- A minimum of five foot-candles shall be provided inside the structure and a minimum of three foot-candles for exterior parking areas. Higher levels are recommended for remote areas subject to security problems such as stairways, elevators, and other pedestrian access points.
- Lighting levels shall be equally distributed to provide uniform illumination over all parking areas.
- Light sources shall be shielded so that the source of the illumination is not seen from outside the structure.

#### 4. Service Stations

##### Site Design

- The site shall be designed to accommodate anticipated circulation patterns and those patterns should be defined by paving and by well-placed landscaped areas.
- In areas developed with buildings adjacent to the sidewalk, service stations shall also be oriented to the sidewalk, placing any service bay door and car wash openings on the rear of the structure.

Figure 79. Glass-back elevator cab and shaft.

- Where commercial development abuts the service station, two-way vehicular access integrated with the adjacent commercial development shall be provided where feasible.
- The site design for projects located at street corners shall provide a strong design element at the corner to help frame the public right-of-way and anchor the corner. **See Figure 80.**
- Parking spaces for vehicles left for repair shall be located in the least visible areas of the site and screened from public view.
- Service or car wash bays shall not face toward a public street nor toward a residential zone if the building is within 200 feet of a residential zone.
- Work bays shall be oriented so that the interior of the bays are not visible or audible from a public street, adjacent residential zones, or designated open space. **See Figure 81.**
- Each pump island shall include a vehicle stacking area for at least two vehicles (38-feet), on at least one end of the pump island and shall not restrict vehicle circulation and parking areas.
- A gasoline tanker truck unloading zone shall be provided and shall not obstruct vehicle circulation and parking areas.

Figure 80. Corner landscaping element.

Work Bays.

Figure 81. Work bays face interior

## Building Design

- Service station buildings shall be designed to complement and be compatible with the predominant architectural theme and scale of the area. If located within a multi-use center, the architectural design shall be compatible with the design of the center.
- The design of the building should be clean and simple, and shall relate to surrounding buildings through use of similar scale, materials, colors, and/or detailing.

- Building elevations facing public streets and residential zones shall be architecturally detailed to provide interest and the appearance of quality development.
- The roof design of service stations, including pump island canopies, shall incorporate full, pitched roof treatments with a low to moderate slope. **See Figure 82.**
- Building materials shall have the appearance of substance and permanency (e.g., masonry).

Figure 82. Sloped roof on pump island canopies.

### Landscaping and Walls

- A three-foot high, landscaped berm, a dense hedge, or a low wall shall be provided along all street frontages where parking is provided. **See Figure 83.**
- A minimum six-foot high decorative masonry wall shall be provided along side and rear property lines not abutting public streets. A minimum five-foot wide landscaped planter shall be provided adjacent to the wall in areas accessible to the public.

Figure 83. Landscaped berm.

### Site Elements

- Gates, fencing, and walls shall remain free of signs or other advertisements.
- The use of chain-link fencing is prohibited if visible from a public street.
- Where security is an issue, fencing shall consist of open grille work, and the use of surveillance cameras is encouraged.
- Electric fences, barbed wire, concertina wire, or other security wire is prohibited.

## 5. Shopping Centers

### Site Design

- Commercial sites shall be separated from residentially-zoned properties by streets, landscaped buffers and/or decorative masonry walls.
- Portions of primary buildings and/or freestanding satellite buildings shall be located at the street setback lines to enclose the site and help frame the street. **See Figure 84.**
- Buildings within the center shall have a logical spatial and functional relationship to each other and shall provide for convenient pedestrian circulation throughout the center.
- Parking shall be provided within convenient walking distances of all tenants. Walking paths to buildings from the public street shall be provided. **See Figure 85.**
- To reduce the visual impact of large paved areas, parking lots shall be broken up into smaller areas separated by landscaping, pedestrian circulation areas and drive aisles.
- Storage areas and loading facilities shall be limited in number and shall be designed, located, and screened to minimize their visibility from outside public areas and surrounding streets.

Figure 84. Buildings placed at street setback lines.

Figure 85. Walking paths.

### Building Design

- Buildings, hardscape, landscape, site furnishings and signage should reflect a unified theme. **See Figure 86.**

Figure 86. Unified theme.

- Where a shopping center is adjacent to a residential zone, the scale of the shopping center shall be reduced to be compatible with the adjoining use by:
  - Keeping buildings as small as possible, particularly in height;
  - Reducing scale through building wall articulation, added detailing and avoiding large scale design elements;
  - Developing the center as a complex of smaller buildings connected by pedestrian-oriented open spaces; and/or
  - Setting the buildings further away from the residential zone and providing dense landscape screening.
- Long, linear buildings shall be avoided. Where such buildings are unavoidable, their length shall be mitigated by changes in building height, wall plane, and spatial volumes and by varied use of window areas, arcades, roof elements, and building materials. **See Figure 87.**
- If the shopping center contains a large scale building, integration of smaller-scale shops along the exterior of the building with entrances from the exterior of the building are desirable in order to create a more human scale and pedestrian-oriented character.
- Side and rear elevations of commercial buildings that are visible from residential zones or public rights-of-way shall be architecturally consistent with the front elevations of the building.
- Blank walls adjacent to main pedestrian areas shall be avoided.

Figure 87. Articulation along wall plane.

- Flat roofs, mansard roofs, and veneer parapets are strongly discouraged in favor of full, pitched roof treatments. In large centers, a combination of flat roofs with decorative cornices and full, pitched roofs may be acceptable if the design presents a balanced appearance. **See Figure 88.**
- All roof-top and ground-mounted equipment shall be screened from view.
- Outdoor sales and storage areas shall be designed to blend with the architecture of the main building. The height of the screening elements shall be tall enough to screen all stored materials. **See Figure 89.**

Figure 88. Appropriate roofing.

Figure 89. Outdoor sales area.

### **11.10 Development Incentives**

This Section offers development incentives to produce greater land use efficiencies and reduce incremental costs for new development.

#### **A. Applicability**

The incentives in this Section shall apply to all new development that meet(s) the applicable eligibility criteria.

#### **B. Definitions**

For the purposes of this Section, lot consolidation shall have the following meaning:

1. Lot consolidation. A legal action in which a lot line is removed or abandoned; a lot line is adjusted; lots are merged; or other equivalent action is taken, for the purpose of allowing a structure or development to be built so that it extends over what were previously two or more separate lots. A lot consolidation cannot create additional lots and cannot make existing lots nonconforming. All lots must be identical in ownership.

#### **C. Lot Consolidation Incentives**

1. Eligibility requirements. In order to be eligible for the by-right development incentives indicated in Subparagraph 2, below, the minimum consolidated lot size for a development shall be 97,500 square feet.
2. By-right incentives. Eligible projects shall receive one or more of the following incentives:
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review), irrespective of the number of lots involved.
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 11.6 Parking and Loading Standards, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio (FAR) and in maximum height shall be in the amounts listed in Table 11-10 Allowable Bonuses for Lot Consolidation. The intensity and height bonus incentives shall apply to the total gross square footage of the consolidated lots.

| Table 11-10<br>Allowable Bonuses for Lot Consolidation |                                  |                    |                               |
|--------------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                            | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.5                                                    | 10%                              | 60 ft              | 15 ft                         |

**D. Green Building Incentives**

1. Eligibility requirements. Projects that are seeking green building certification by a third-party entity (e.g., LEED, etc.) shall be eligible for the by-right development incentives indicated in Subparagraph 2.
2. By-right incentives.
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review).
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 11.6 Parking and Loading Standards, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio [FAR]) and in maximum height shall be in the amounts listed in Table 11-11 Allowable Bonuses for Green Building. The intensity and height bonus incentives shall apply to the total gross square footage of the project site.

| Table 11-11<br>Allowable Bonuses for Green Building |                                  |                    |                               |
|-----------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                         | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.5                                                 | 10%                              | 60 ft              | 15 ft                         |

**E. Application and Review Process for Incentives**

1. Written submittal. Interested parties shall submit a written request for approval of incentives to the Director of Community Development on forms provided by the Community Development Department.
2. Determination. The Director of Community Development shall determine whether the proposed new development meets the eligibility criteria in Paragraphs C.1. or D.1.

Additional factors to be considered when reviewing applications for incentives shall include the following:

- a. Detriment. The proposal will not detrimentally affect access, design, or other public safety and welfare concerns.
  - b. Covenants or conditions. The proposal will not violate restrictive covenants contained on the face of the final plat or conditions of plat approval.
  - c. Right-of-way easements. The proposal will not invalidate any easement(s) unless the adjustment establishes replacement easement(s) that is properly filed with the city.
4. Conditions. Conditions may be imposed in connection with the granting of any incentive where the Director of Community Development deems that conditions are necessary to protect the public health, safety, and welfare.

### **11.11 Entitlement Procedures**

#### **A. Purpose**

These administrative procedures have two major purposes:

1. Ensure that development conforms to the SWIP Specific Plan ("Plan").
2. Ensure that the City's review is as expedited as possible while remaining legal and proper.

#### **B. Summary of Processing Procedures**

1. Conformity with the Plan. The Director of Community Development shall review each application for conformity with the development regulations in this Chapter. Conformity has two components:
  - a. Standards. Compliance with the Standards is mandatory and the City may not approve a project that fails to comply with the Standards.
  - b. Guidelines. The City may exercise discretion in evaluating the project's compliance with the Guidelines.
2. Project Review. Applications for development approvals shall be filed with the Department will be returned for revision. Applications must strive to meet the "Guidelines," but applicants may propose alternate ways to achieve the goals of the Guidelines.
3. Timing of Permits and Approvals. Required planning approvals shall be obtained before the issuance of any grading, building, or other construction permit, and before the proposed use is constructed, otherwise established, or put into operation.
4. Processing Requirements. Applications for planning permits shall be processed in compliance with Table 11-12Hearing Bodies.
5. Timing of Project Review. Project review shall be required before the issuance of a Building or Grading Permit, Business License, or Certificate of Occupancy for any new structure (not including fences or walls) and/or existing structures to be reconstructed or remodeled (including facade improvements).

**Notes:**

Decisions of any "Reviewing Body" may be appealed to the City Council, except where State law limits such appeal to the City Engineer. If the Planning Commission is listed above as the "Appeal Body", the Commission must first review an Appeal before it may be forwarded to the City Council for consideration.

DAB—Development Advisory Board

CD—Community Development Director

PC—Planning Commission

CC—City Council

PR—Parks and Recreation Commission

X\*—At the discretion of the Director of Community Development or his/her designee

X\*\*—If Public Park(s) are considered

X\*\*\*—City Engineer has final approval

f—Recommending body to the City Council

**C. Similar Use Determination**

1. **Applicability and Authority.** Unlisted uses in Table 11-2 are prohibited uses, unless the Director of Community Development finds a proposed use to be similar to an expressly allowed use. A Similar Use Determination is a process for determining when an unlisted use is similar in nature to a permitted or conditionally permitted use and may be permitted. As specified by Municipal Code Section 30-4 Other Uses to be Determined by the Director of Community Development, the Director of Community Development shall have the responsibility and authority to make Similar Use Determinations.
2. **Ministerial Action.** A Similar Use Determination shall constitute a ministerial action.
3. **Application Contents and Filing.** An application for similar use shall be in writing on forms provided by the Director of Community Development.
4. **Determination Findings.** In determining "similarity," the Director of Community Development shall make all of the following findings:
  - a. The characteristics of and activities associated with the proposed use are equivalent to one or more of the listed uses and will not involve a higher level of activity or environmental impacts than the uses listed in the land use district;
  - b. The proposed use will be consistent with the purposes of the applicable land use district; and
  - c. The proposed use will be consistent with the General Plan and this SWIP Specific Plan.
5. **Notice.** A Similar Use Determination shall be made in writing and shall contain the facts that support the determination. The Community Development Department shall maintain all determinations on record for review by the general public upon request. The notice shall include:
  - a. A brief statement explaining the criteria and standards considered relevant to the decision;
  - b. A statement of the standards and facts relied upon in rendering the decision; and
  - c. An explanation of appeal rights and appeal deadlines. The determination of similar use by the Director of Community Development shall be subject to appeal to the Planning Commission.

***D. Dedication and Maintenance of Gateway Intersection Enhancements***

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for gateway intersection enhancements in Section 11.8 Public Right-of-Way, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standards indicated in Section 11.8 Public Right-of-Way; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.
  - c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure the installation and perpetual maintenance of the gateway intersection enhancements.

***E. Nonconforming Lots, Structures, and Uses***

1. Nonconformance provisions are established to:
  - a. Bring all uses, structures, sites and signs into conformance with the developmental requirements and design guidelines in the Code;
  - b. Limit the occurrences and extent of nonconformance by prohibiting expansion, intensification, reinstatement, alteration, restoration after destruction, and reestablishment after abandonment; and
  - c. Gradually phase out nonconforming uses, structures, lots, and signs.
2. Applicability
  - a. Nonconforming uses, structures, signs and lots may be maintained, expanded, altered and/or abated only in accordance with the provisions of this Specific Plan.
  - b. Any Designated Historic Landmark, or any property listed on the California Register of Historical Resources or National Register of Historic Places, shall be exempt from the provisions of this Section with respect to the restoration and maintenance of structures, provided that any construction plans are approved through a Certificate of Appropriateness by the Historic Preservation Commission/Planning Commission.

3. Nonconforming Uses. A use that lawfully occupied a building or land at the time this Specific Plan became effective, and that does not conform to the use regulations of the land use district in which it is located, is deemed a "legal nonconforming use." A legal nonconforming use may continue, subject to the following:
  - a. Discontinuation of Use
    - i. Loss of legal nonconforming status. If a legal nonconforming use is discontinued for a period of 90 or more days, regardless of the owner's intent, it shall lose its legal nonconforming status and the continued use of the property shall be required to conform to all provisions of this Specific Plan.
    - ii. Extension of legal nonconforming status. Wherein special circumstances exist, the Director of Community Development may extend the legal nonconforming status of a use, for up to an additional 90-day period. Furthermore, an additional extension may be granted by the Planning Commission, for up to an additional 90-day period. The total time period of all time extensions shall not exceed 180 days.
    - iii. Extension of legal nonconforming use.
      - (1) An application for a Minor Use Permit shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
      - (2) The application shall be reviewed by the Director of Community Development within 30 days following application filing. The Director of Community Development shall notify the applicant, in writing, as to whether the application is complete. If the application is not complete, the Director of Community Development shall specify those parts of the application that are not complete and shall identify the manner by which it can be made complete. If written notification is not provided to the applicant within 30 days following application filing, the application shall be deemed complete.
      - (3) The Director of Community Development shall investigate the facts bearing on the application and provide the information necessary for action on the application, consistent with this Specific Plan and the General Plan. The applicant shall have made a good faith effort through the submittal of documentation and has diligently pursued compliance with this Specific Plan.
      - (4) The application shall be reviewed by the Director of Community Development at a duly noticed public hearing, whom shall then approve, modify or deny such application. The decision of the Director of Community Development shall be final and conclusive in the absence of a timely filed appeal to the Planning Commission. An appeal of the Director of Community Development's decision

shall be filed within 10 days from the date of the decision of the Director of Community Development. An appeal of the Director of Community Development's decision shall be reviewed by the Planning Commission. The decision of the Planning Commission shall be final and conclusive in the absence of a timely filed appeal to the City Council.

- (5) The applicant may appeal the decision of the Planning Commission to the final deciding body, the City Council. The City Council decision shall be final and conclusive. If the application to extend the legal nonconforming use is approved by the City Council, the extension shall be granted for 90 days from the date of approval.
- (6) If the Director of Community Development or appointed designee has determined that the applicant has failed to show a good faith effort towards continually processing the extension of legal nonconforming use application (i.e., revising plans, withdrawing the application, placing the project on hold, etc.), the legal nonconforming use shall cease within 60 days from the application submittal date.
- (7) In granting an extension of the legal nonconforming status, the Director of Community Development may attach reasonable conditions and restrictions to the request, in addition to those required by this Specific Plan, which will ensure that the use:
  - Will not endanger the public health, safety or general welfare;
  - Will not injure the value of adjoining or abutting property;
  - Will not result in any significant environmental impacts; and
  - Will be in harmony with the area in which it is located.
- (8) In approving an extension of the legal nonconforming status, the Director of Community Development or Planning Commission shall consider and clearly establish the following findings of fact:
  - The non-conforming use has been discontinued within the 90-day period.
  - A physical and/or economic hardship has prevented the nonconforming use from being in compliance prior to the expiration of the 90 day period;
  - Approving the extension will not adversely affect the health, safety or general welfare.
- b. Change in Ownership, Tenancy or Management. A change in ownership, tenancy or management of a nonconforming use shall not affect its legal nonconforming status, provided that the use did not discontinue pursuant to the section entitled "1) Loss of legal nonconforming status" or the type of use and/or intensity of use do not change.

- c. New Development. New development on any lot or parcel upon which a legal non conforming use exists shall require that all uses on the property conform to the provisions of this Specific Plan.
        - d. Alteration and Expansion of Use
          - i. A nonconforming use shall not be enlarged or extended in such a way as to occupy any part of any structure or property that it did not occupy prior to the creation of the nonconformity.
          - ii. A structure fully or partially occupied by any nonconforming use shall not be moved, altered or enlarged, unless required by law, or unless the moving, alteration or enlargement will result in the elimination of the nonconforming use.
        - e. Intensification of Use. A nonconforming use shall not be intensified in such a way as to increase the discrepancy between existing conditions and the standards set forth in this Specific Plan.
4. Nonconforming Structures. A structure lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of the land use district in which it is located, including setbacks, separations, height and design, is deemed a "legal nonconforming structure." A legal nonconforming structure may continue to exist, subject to the following:
  - a. Damage or Destruction
    - i. A legal nonconforming structure that is damaged or partially destroyed by fire, flood, wind, earthquake or other calamity, or the public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented by reasonable care and maintenance of the structure, may be reconstructed up to the original size, placement and density, provided that total cost of such reconstruction does not exceed more than 50 percent of the structure's current fair market value. The structure may be restored and the nonconforming use may be resumed, provided that restoration is started within six months, unless extended by the Director of Community Development, and diligently pursued.
    - ii. In the event that the cost of repairing such damage exceeds 50 percent of the current fair market value of the structure prior to such damage occurring, the structure may be reconstructed up to the original size, placement and density, subject to all of the following:
      - The Planning Commission, at a duly noticed public hearing, must find that continuing the nonconforming structure will not result in an annoyance to and/or reduction of any surrounding property; and

- The extent of damage or partial destruction shall be based upon a comparison of the estimated cost of restoring the structure to its condition prior to such damage or partial destruction with its value at the time the structure was damaged or partially destroyed. Estimates for such purpose shall be made by or reviewed by the Building Official; and
  - The restoration is commenced within six months and diligently pursued to completion.
  - An application for a Nonconforming Structure shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the go-day period.
  - A structure or development that has been damaged or destroyed by fire, flood, wind, earthquake, or other calamity, or by public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented may be reconstructed up to the original size, placement and density, except a multiple family dwelling or development which has been abandoned for a period of 90 or more days prior to being involuntarily damaged or destroyed, or a multiple family dwelling or development constituting a public nuisance prior to being involuntarily damaged or destroyed may not be reconstructed unless the structure is made to comply to all provisions of this Specific Plan.
- b. Alterations and Expansion
- i. A nonconforming structure shall not be moved, altered or enlarged so as to increase the discrepancy between existing conditions and the most current standard as prescribed by the land use district in which the structure is located, except alteration and/or enlargement to a single family dwelling conducted pursuant to section "e) Nonconforming Single-Family Residential Structures".
  - ii. Within land use districts, reasonable repairs and alterations may be made to legal nonconforming structures, provided that no structural alterations shall be made which would prolong the life of supporting members of a structure, such as bearing walls, columns, beams or girders. Structural elements may be modified only if such modification or repair is immediately necessary to protect the public health and safety, occupants of the legal nonconforming structure, or adjacent property, as determined by the Building Official. The total cost of such repairs or alterations may not exceed 50 percent of the replacement cost of the nonconforming structure.
- c. New Structures. Any new structure constructed on a lot or parcel with an existing legal nonconforming structure shall be constructed in conformance with all applicable provisions of this Specific Plan. However, in no case may a new nonresidential structure be constructed on the same lot as an existing legal nonconforming residential structure.

- 11-109

6. Nonconforming to Development Standards. The development that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area, coverage, configuration, dimensions, parking, landscaping, screen walls, fences and enclosure trash receptacles, is deemed "legal nonconforming," provided such development was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A development that is nonconforming as to landscaping, screen walls, fences and enclosure of trash receptacles, shall be altered to comply with the district regulations covering the following standards, or as a condition of any subsequent Development Plan or Conditional Use Permit approval.
7. Nonconforming Lots. A lot or parcel that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area and configuration is deemed a "legal nonconforming lot," provided such lot or parcel was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A lot or parcel that is nonconforming as to minimum area or dimension shall be granted all development rights and uses of the land use district within which it is located.
    - i. The landscaping of setback areas insofar as a setback exists;
    - ii. The landscaping of parking areas, provided fulfilling the requirement does not reduce off-street parking or loading spaces to fewer than prescribed in this Specific Plan;
    - iii. The screening of storage areas; and
    - iv. The enclosure of trash receptacles.
8. Elimination of Nonconforming Adult Business Uses. Nonconforming adult business uses shall be eliminated in compliance with Municipal Code Chapter 30 Zoning and Development Code.
9. Abatement of Nonconforming Uses, Structures, Lots and Signs. Whenever a use, structure, site or sign becomes nonconforming because of a change of land use district boundaries or a change of the regulations prescribed for the district in which the site is located, the period of time prescribed in Municipal Code Chapter 30 Zoning and Development Code for the abatement period for the elimination of the use, the removal of the structure or sign, or the improvement of the lot or parcel shall begin on the effective date of the change of district boundaries or regulations.

***F. Administration and Enforcement***

The Director of Community Development shall enforce the provisions in this Specific Plan. All officers, employees, and officials of the City of Fontana, who are vested with the duty or authority to issue permits or licenses shall conform with this Specific Plan and shall not issue any permit or license, or approve any use or building, which would be in conflict with this Specific Plan. Any permit, license or approval issued that is in conflict with the requirements of this Specific Plan shall be considered null and void.

***G. Amendments to the Specific Plan***

The SWIP Specific Plan may be amended utilizing the same procedures by which it was originally adopted. In addition, subsequent amendments to this Specific Plan shall demonstrate the amendment meets the intent of the Specific Plan's existing policy framework, or specific findings to demonstrate the amendment enhances the Plan or is necessary to more effectively implement the Specific Plan. All sections or portions of the Specific Plan proposed to be amended or that may be affected by the amendment must be identified during the amendment process. A concurrent amendment to the General Plan would not be required provided that the Director of Community Development determines that substantive changes would not influence the goals, objectives, policies, or programs of the General Plan.

Allowing flexibility in the administration of the Specific Plan enhances the effectiveness of the Specific Plan as a comprehensive, "living" planning document. The following minor modifications to the Specific Plan qualify for processing as an administrative amendment to the Specific Plan subject to the review and approval of the Director of Community Development:

- Changes in the location of infrastructure and public facilities (e.g., internal roads, drainage facilities, etc.).
- Minor change in roadway alignment.

### **12.1 Purpose**

The Speedway Industrial District (SID) is intended to encourage uses that complement and support the Auto Club Speedway of Southern California. This district will provide opportunities for a mixture of uses, including service commercial, entertainment, small businesses, research and development, restaurants, and hospitality uses. Light manufacturing will be allowed in the district. General features of this District include:

- Auto-related uses
- Entertainment-oriented uses
- Speedway theming
- Landscape/Streetscape Enhancement
- Edge conditions that are compatible with surrounding uses
- Establishment of uses that capitalize on regional market potential
- Facade Improvements that enhance the I-10 Corridor
- Promotion of lot consolidation

## **12.2 Applicability**

### **A. Projects Subject to Development Regulations**

This Chapter contains the development regulations that govern all future private development actions in the SID, including new construction, additions or renovations to existing structures and/or new land uses proposed for existing facilities.

### **B. Right of Continued Use**

This Chapter shall not require any change in any existing building or structure for which a building permit has been previously issued or for approved plans on file in the Community Development Department before the effective date of this Specific Plan. Changes in the property's ownership or tenants of legal existing uses shall likewise require no change in any existing building or structure. Nonconforming standards and provisions shall be governed by Section 12.11 Entitlement Procedures.

### **C. Other Requirements**

This Chapter does not eliminate the need for obtaining any other permits required by the City, or any permit, approval or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.

### **D. Types of Development Regulations**

The development regulations are of two types – Standards and Guidelines – as follows:

1. Standards address those aspects of development that are essential to achieve the goals of the Specific Plan. They include specifications for allowable land uses and site development (e.g., building height, setbacks, etc.). Conformance with Standards is mandatory. Standards are indicated by use of the words "shall," "must," or "is / is not permitted."
2. Guidelines provide guidance for new development in terms of aesthetics and design details. They are intended to direct building and site design in a way that results in the desired character for the SID. Whereas conformance with the Standards is mandatory, conformance with the Guidelines is preferred and/or recommended. Provisions that fall into this category are indicated by the use of the words "should," "may" or "are encouraged to." In various cases, the Guidelines provide a choice of treatments that will achieve the desired effect. Developers are permitted to propose alternative design details if they are able to show that the details implement the Specific Plan objectives with respect to the desired character of the SID.

### **E. Minimum Requirements**

The provisions in this Chapter shall be minimum requirements. When this Chapter provides for discretionary authority on the part of the Director of Community Development, Planning Commission, or City Council, that discretion may be exercised to impose more stringent requirements if deemed necessary to accomplish the objectives of the SID.

**F Overview of Development Regulations**

1. Relationship of Land Use Districts. The development regulations in this Chapter apply to those properties that are within the SID. Exhibit 12.1 Land Use Plan indicates the location of the SID and its relationship to the other land use districts in the Specific Plan area.
2. Standards, Guidelines, and Procedures. The development regulations are divided into the following sections: 12.3 Allowable Land Uses and Permit Requirements; 12.4 Development Standards; 12.5 Landscape Standards; 12.6 Parking and Loading Standards; 12.7 Sign Standards; 12.8 Public Right-of-Way Streetscape; 12.9 Design Guidelines, 12.10 Development Incentives, and 12.11 Entitlement Procedures. Projects must meet all development standards in order to achieve approval in the development review process. Projects are encouraged to adhere to the guidelines contained in 12.9 Design Guidelines.
3. Steps for Using Chapter. Table 12-1 Process Procedures illustrates the steps for using this Chapter.

Exhibit 12.1 – Land Use Plan

### **12.3 Allowable Land Uses and Permit Requirements**

This Section identifies allowable land uses and their permit requirements.

#### **A. Allowed Uses**

Table 12-2 Allowable Land Uses and Permit Requirements identifies the types of land uses allowed in the SID and the permit required to establish each use.

#### **B. Uses Not Listed**

Uses not listed in Table 12-2 are prohibited land uses, until and unless the Director of Community Development makes a similar use determination in compliance with Subsection 12.11.D Entitlement Procedures – Similar Use Determination.

#### **C. Other Applicable Regulations**

The provisions contained in this SWIP Specific Plan constitute the primary land use and development standards for the Specific Plan area. These regulations are in addition to the provisions in the City of Fontana Municipal Code.

This Specific Plan provides all development standards and guidelines necessary to approve subsequent project applications, unless otherwise noted. Permit processing procedures (e.g., noticing, hearing, appeals, and expiration procedures) and enforcement procedures are provided in Municipal Code Chapter 30 (Zoning and Development Code) shall apply, unless otherwise noted. Where there is a conflict between the provisions in this Specific Plan and those in the Zoning and Development Code, the Specific Plan provisions shall prevail to the extent allowable under Federal or State law. Where there is no conflict, both shall be applied concurrently.

#### **D. Definitions**

Definitions for land uses are provided in Appendix A Definitions. If a definition is not provided, the definitions in the Municipal Code shall apply. The Director of Community Development shall interpret the definitions; make a similar use determination in compliance with Subsection 12.11.C Entitlement Procedures – Similar Use Determination; and/or refer any questions to the Planning Commission for its determination. For the purposes of this Specific Plan, the following definitions shall apply:

1. Commercial Use: Activity involving the sale of goods or services carried out for profit.
2. Industrial Use: Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

**Table 12-2 Allowable Land Uses and Permit Requirements**

## 12.4 Development Standards

New land uses and structures and alterations to existing land uses and structures in the SID shall be designed, constructed, and established in compliance with the requirements in this Section.

### A. Intensity and Dimensional Standards

Table 12-3 Intensity and Dimensional Standards provides the required intensity and dimensional standards for proposed development. The Director of Community Development is authorized to approve modifications of 10 percent or less of any land use district setback, lot width, lot depth, building coverage, building height, or wall height standard in compliance with the administrative variance procedures in Municipal Code Section 30-51.6 (Findings necessary for granting a variance). See Exhibit 6-3 Dimensional Standards.

The Director of Community Development may grant an administrative variance from the requirements of this chapter where practical difficulties, unnecessary hardships, or results contrary to the intent of this chapter would occur from the strict and literal interpretation and enforcement of the Code. An administrative variance may be granted upon conditions which will ensure the protection of the public safety, health and welfare. To grant an administrative variance, the Director of Community Development must find from the facts presented that the following conditions exist.

- (1) That because of circumstances applicable to the property including size, shape, topography, location or surroundings, the strict application of this chapter will deprive the property of privileges enjoyed by other property in the vicinity and under identical zoning classification;
- (2) That the granting of such an administrative variance will be subject to conditions assuring that the variance shall not constitute a grant of special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district in which the property is located;
- (3) That the administrative variance does not authorize a use or activity which is not a specifically allowed use in the zoning district in which the property is located; and
- (4) That the granting of one administrative variance will not be contrary to the general plan.

**Table 12-3: Intensity and Dimensional Standards**

| Lot Size and Building Placement                            |                                                       |                                                       |

- Ⓑ = Property Line
- Ⓒ = Lot Width
- Ⓓ = Lot Depth
- Ⓔ = Front/Side Setback – Secondary Highway/Collector Street
- Ⓕ = Front/Side Setback – Primary Highway
- Ⓖ = Front/Side Setback – Major Highway
- Ⓗ = 30 foot Height
- Ⓘ = 60 foot Height
- Ⓣ = 15 foot Stepback above 30 foot Building Height

Exhibit 12-2 – Dimensional Standards.

**B. Fences, Walls, and Screening**

1. Standards and Guidelines. Table 12-4 contains standards for fences, walls, and screening. Refer to Section 12.9 Design Guidelines for guidelines about the design, materials, and construction of fences, walls, and screening.

**Table 12-4 Standards for Fences, Walls, and Screening**

| <i>Location</i>                                    | <i>Materials<br/>See Section 12.9 Design Guidelines</i>                                                                                                        | <i>Maximum Height (1)</i>                                                                                 |
|----------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| Within front setback area                          | Solid fencing/wall                                                                                                                                             | 36 inches; or<br>42 inches if abutting residential front yard                                             |
|                                                    | Open fencing/wall                                                                                                                                              | 6 ft                                                                                                      |
| Within street side setback area                    | Tubular steel construction allowed in required setback area if set back at least 15 ft from lot line. Solid masonry wall not allowed in required setback area. | 8 ft if necessary for security purposes, with 18-inch maximum width pilasters a minimum of 8 ft on center |
| Within interior side setback area                  | Any type of fence, hedge, or wall allowed, except that if abutting residential zone, solid masonry wall only                                                   | 8 ft                                                                                                      |
| Within rear setback area                           | Any type of fence, hedge, or wall allowed, except that if abutting residential zone, solid masonry wall only                                                   | 8 ft                                                                                                      |
| Within freeway setback area                        | Tubular or wrought iron fencing with pilasters                                                                                                                 | 8 ft tall pilasters at 30 ft on center with 8 ft tall tubular or wrought iron fencing between pilasters   |
| Outside of a required setback area                 | Solid or open fencing/wall                                                                                                                                     | No height limit                                                                                           |
| At intersections of alleys, streets, and driveways | Solid or open fencing/walls                                                                                                                                    | 30 inches                                                                                                 |
| Within I-10 Freeway setback area                   | See Section 12.8.C Public Right-of-Way Streetscape- Freeway Edges Design Criteria                                                                              |                                                                                                           |

Note: (1) All fences and walls shall meet the City's line of sight regulations, as determined by the City Engineer.

2. Materials.
  - a. Open fencing shall mean fencing with over 50 percent of the surface area open for free passage of light and air and through which the area behind the fence is visible to public view. See Exhibit 12.3 Open and Solid Fencing.
  - b. Solid fencing shall mean fencing with 50 percent or less of the surface area open for free passage of light and air and designed to conceal the area behind the fence from public view. See Exhibit 12.3 Open and Solid Fencing.
  - c. Barbed wire fence, electric fences, or similar fencing material is prohibited.
  - d. Chain link fencing is allowed on interior property lines that are not visible from public rights-of-way.

*Examples of Solid Fencing*

Exhibit 12-3 – Open and Solid Fencing.

3. Screening and buffering.

- a. Roof-mounted and ground-mounted mechanical equipment, utilities, storage, and solid waste storage areas shall be screened from adjoining properties and public right-of-ways by a visual barrier (e.g., wall, fence, landscape material, etc.) to the satisfaction of the Director of Community Development. Where only landscaping is used for screening, it shall be planted with five-gallon (minimum size) shrubs spaced to provide a continuous dense screen.
- b. Parking lot perimeters shall be screened and planted in compliance with Section 12.6 Parking and Loading Standards.

**C. Outdoor Activities and Storage**

- 1. Storage in Setback Areas. Material or equipment shall not be stored anywhere in the front yard. Temporary storage of construction materials during construction on the same site is permitted. Boats, campers, motor vehicles, trailers, equipment, materials, or antenna that may be stored in side and rear yards, provided that they are outside the required side and rear setback areas identified in Table 12-3 Intensity and Dimensional Standards.
- 2. Limitations on Outdoor Uses.
  - a. All uses shall be conducted entirely within a completely enclosed building that is attached to a permanent foundation, except approved outdoor dining areas, vehicle sales and rental businesses, parking areas, nursery growing areas, industrial activities, and other approved uses that require outdoor activities.
  - b. Areas used for the approved outdoor storage of vehicles, equipment and/or building materials (raw or finished) may use compacted slag, gravel, or other similar material deemed suitable by the Director of Community Development.
- 3. Outdoor Wholesaling. Outdoor wholesaling of goods and materials shall comply with the following:
  - a. A building shall be provided on the same parcel or on an adjacent parcel associated with the same business.
  - b. All display materials, including vehicles, shall be set back five feet from any landscaped area and shall not be located on required parking areas.
  - c. The entire area used for display purposes shall be surfaced with asphalt or an equally serviceable hard pavement surface. The surface shall be maintained in good condition.

- d. Storage of equipment or materials, with the exception of the display of vehicles for sale or rent, shall be screened by a visually solid masonry wall of minimum height six feet. The approving authority may determine through the design review process that the subject use requires a solid masonry wall higher than six feet.
- e. Outdoor display areas shall be maintained in a neat and orderly condition.

***D. Caretaker Housing***

Caretaker housing shall be:

- 1. Accessory to a principal use;
- 2. A maximum of 1,500 square feet total floor area unless otherwise approved by the Planning Commission;
- 3. Limited to one unit per lot; and
- 4. Subject to the setback requirements applicable to the principal structure with which it is associated.

***E. Solar Access***

A structure, fence, or wall shall not be constructed or modified, and vegetation shall not be placed or allowed to grow so as to obstruct more than 10 percent of the absorption area of a solar energy system on an abutting or adjacent lot at any time.

***F. Undergrounding of Utilities***

- 1. Utility service laterals to new development shall be installed underground.
- 2. Temporary overhead power and telephone facilities are permitted only during construction.
- 3. Placement, location and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission prior to any administrative or discretionary approval.
- 4. Transformer enclosures shall be designed of durable materials with finishes and colors used that are compatible and harmonious with the overall architectural theme.
- 5. All utilities including, but not limited to drainage systems, sewers, gas lines, water lines, and electrical, telephone, and communications wires and equipment shall be installed and maintained underground. Placement, location, and screening of utilities of any kind, which cannot be installed underground and must be placed above ground for function and safety reasons, require written approval by the Director of Community Development or the Planning Commission before any administrative or discretionary approval.

## 12.5 Landscape Standards

### A. Required landscaping

This section provides the required minimum standards for all landscaped areas within any new and rehabilitated development.

1. Landscaped area means the entire parcel less the building footprint, driveways, nonirrigated portions of parking lots, and hardscapes (driveways, approaches, sidewalks, etc.). Decorative hardscapes used to enhance the landscape will be considered as part of the landscape area; this would include such things as cobble rock, decomposed granite, brickwork, stamped concrete, gravel, pavers, and water features.
2. Landscape setbacks along public right-of-ways shall incorporate landscape buffers with undulating and variable height earth-mounding (berms), and/or low walls, and required plant materials as shown in Table 12-5 Landscape Standards.
3. Block wall and wrought iron fencing shall be located behind landscape setback area(s).
4. The developer shall submit to the City's Department of Engineering, a Landscape Documentation Package that conforms to the Water Efficient Landscape Ordinance in Municipal Code, Chapter 28Vegetation.
5. All new development landscaping shall comply with the standards shown in Table 12-5 Landscape Standards. Additional guidelines that should be considered are provided in Section 12.9 Design Guidelines.
6. The Recommended Plant Materials Palette, Table 12-6 can be found immediately after this section. The plant materials palette is provided to ensure the installation of drought-tolerant, water efficient landscaping that will provide wind breaks and thrive in the local climate conditions. In an effort to provide visual elements that distinguish this district from others, please note that turf (grass) does not appear in the Plant Materials Palette, and shall be prohibited, in lieu of drought-tolerant ground covers.
7. Public right-of-way improvements, including street improvements, streetscape/landscape (parkway) improvements, and street tree requirements, are in Section 12.8 Public Right-of-Way Streetscape.

**Table 12-5 Landscape Standards**

Notes: The Director of Community Development may require additional setbacks.

|                                                                                                      |                                                                                                                                                                                                                                                                                                                        |

| Groundcover                                                                                          | 12-inch maximum on center spacing that will cover area within one year of initial planting                                                                                                                                                                                                                             |
| Street trees in parkways per Master Plan of Parkway Trees                                            | 1 tree of not less than 24-inch box size for each 30 linear feet of street frontage<br><br>In parkways of inadequate width, street trees shall be planted in abutting setback/yard, in addition to the required buffer landscaping in setback area                                                                     |
| Landscape buffer in front setback area                                                               | 1 tree for each 20 linear feet minimum of street frontage and three 5-gallon shrubs for each tree<br><br>Undulating earth berms with informal tree and shrub massing and/or low decorative walls may be utilized.<br><br>Maximum slope: 3:1 for berms                                                                  |
| Additional landscape requirements                                                                    | 1 tree for each 800 square feet minimum of other required landscaped area and 8 shrubs for each tree.                                                                                                                                                                                                                  |
| Landscape Buffer<br>Front setback area and street-side setback area                                  | Major Highway: 30 ft minimum width<br>Primary Highway: 25 ft minimum width<br>Collector/Local Streets: 20 ft minimum width                                                                                                                                                                                             |
| Landscape buffer in any side or rear yard abutting a residential zone                                | 20 ft minimum width with 1 tree for each 20 linear feet of lot line, and 3 shrubs per tree                                                                                                                                                                                                                             |

**B. Recommended Plant Materials Palette**

Table 12-6 Recommended Plant Materials Palette provides a listing of primarily drought-tolerant trees, shrubs, and ground covers to provide water-efficient landscaping in new projects. The limited selection of landscape material in the palette is envisioned to assist the user in incorporating sustainable landscaping into the project, while including enough variety of size, form, and density, to meet the requirements within buffer setbacks and screening techniques. Final selection shall be approved the City. The Director of Community Development shall approve artificial turf.

*Myoporum parvifolium*

## 12.6 Parking and Loading Standards

### A. Applicability

This section contains regulations for off-street parking and loading. Regulations identify required number of parking and loading spaces for all new development projects and those proposing substantial modification to existing buildings. Please refer to Municipal Code Chapter 30 Zoning and Development Code for all parking and loading-related information or regulations not specifically addressed in this section.

### B. General Parking and Loading Regulations

1. Methods of Calculation.
  - a. Multiple Uses. If more than one use is located on a site, the total number of required off-street parking and loading spaces shall be the sum of the requirements for the various uses computed separately. If individual uses on the same site have a floor area less than that for which loading spaces would be required, then the total gross floor area of all uses on the site or lot shall be used in determining the required number of loading spaces.
  - b. Fractional Number. Whenever the computation of the required number of off-street parking or loading spaces results in a fractional number, one additional space shall be required for a fraction of more than one-half, but shall not be required for a fraction of one-half or less.
2. Off-Site Location. Required off-street parking spaces shall be located on the same property as the use that they are intended to serve. Where the required parking spaces cannot be accommodated on the same property, they may be located in a separate off-site parking facility that is not more than 300 feet from the use(s) they serve.
3. Shared Use. Required off-street parking and loading spaces shall not be considered as providing parking or loading spaces for any other use, except where shared use facilities are approved in compliance with Subparagraph 5 Adjustments to Parking Requirements, below.
4. Uses Not Specified. For uses not specified, the Director of Community Development shall determine parking requirements based upon the requirements of the most similar use. See Subsection 12.11.C Entitlement Procedures – Similar Use Determination.
5. Adjustments to Parking Requirements.
  - a. Administrative Variance. The Director of Community Development is authorized to approve alternate parking plans involving a modification of 10 percent or less of any of the off-street parking and loading standards in compliance with Section 30-51.5 of Municipal Code Chapter 30.

- b. **Parking Study Option.** An applicant may submit a separate parking and loading study for new development to the Director of Community Development for review and approval. A parking and loading study shall provide sufficient data and information to justify the need for adjustments to the parking and loading requirements and shall analyze whether:
  - i. Adequate off-street parking will be provided for the project;
  - ii. The project demonstrates the use of creative design concepts, including but not limited to shared parking facilities, transit accessibility, pedestrian amenities, and bicycle amenities;
  - iii. Environmental impacts associated with the project will not be increased by the modification of standards; and
  - iv. Traffic safety and pedestrian safety will be enhanced by the modifications.
- c. **Shared Use Facility.** Required off-street parking and loading spaces may be considered as providing parking or loading spaces for another use where joint facilities serving more than one use contain no less than the total number of spaces deemed necessary for each individual use added together with other uses. Where adjoining uses on the same site have different hours of operation with minimal conflict, the Director of Community Development may determine that some or all of the same spaces may be counted as satisfying the requirements for both uses, provided that the number of spaces shall not be less than the prescribed for the use requiring the greater number.

***C. Required Number of Parking Spaces***

Each land use shall provide the number of off-street parking spaces indicated in Table 12-7 Parking Requirements by Land Use, except where adjustment has been granted in compliance with Subparagraph b.5 Adjustments to Parking Requirements, above. For the purposes of this Section, the following definitions shall apply:

- 1. **Commercial Use:** Activity involving the sale of goods or services carried out for profit.
- 2. **Industrial Use:** Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.

**Table 12-7 Parking Requirements by Land Use**

| <b>Land Use</b>                                                                   | <b>Vehicle Spaces (Minimum #)<br/>GFA – Gross Floor Area</b>                                                                                                                                         | <b>Bicycle Spaces<br/>(Minimum #)</b>                                  |

**D. Required Number of Loading Spaces**

Each land use shall provide the number of off-street loading spaces indicated in Table 12-8 Loading Space Requirements by Land Use. Requirements for uses not specifically listed shall be determined by the Director of Community Development based upon the requirements for comparable uses and upon the particular characteristics of the proposed use. For other standards (e.g., size of loading spaces, location, turning radius, etc.), refer to Article XI Off-Street Parking and Loading Standards, Division 4 Loading Area Regulations, in Municipal Code Chapter 30 Zoning and Development Code.

| School, Truck Driving                                                         | 1 space; and additional spaces required by design review                                                                                                                                | Van             |
| <b>Distribution, Wholesaling and Warehousing Uses</b>                         |                                                                                                                                                                                         |                 |
| Warehousing Facilities                                                        | 5,000 - 30,000 sq ft: 1 space; and<br>1 additional space for each additional 30,000 sq ft                                                                                               | Tractor Trailer |

**Notes:**

(1) A van loading space shall be a minimum of 12 ft wide by 19 ft long with a minimum 10 ft overhead clearance.

A truck loading space shall be a minimum of 12 ft wide by 45 ft long with a minimum 14 ft overhead clearance.

A tractor trailer loading space shall be a minimum of 12 ft wide by 70 ft long with a minimum 14 ft overhead clearance.

**E. Landscaping Standards for Parking Areas**

Within any parking area, one tree shall be planted for every five single-row parking stalls or 10 double-row parking stalls. Eighty percent of these shall be 15 gallons in size and the remaining 20 percent shall be 24-inch box or larger in size. If for some reason the contractor is unable to distribute trees in the interior of the parking area in compliance with these standards, the Director of Community Development may approve the placement of no more than 40 percent of the trees within the perimeter of the parking area. Planters shall not have a dimension less than four feet, excluding the thickness of the curbing. These requirements may be reduced for industrial parking areas that are screened from public view.

1. Parking areas shall contain a minimum landscape area equivalent to 30 percent of the total required 15 percent landscaping for the total site area.
2. Parking area perimeter landscaping.
  - a. Parking areas for nonresidential uses abutting or adjacent to residentially zoned property shall provide a landscape strip that is a minimum of 10 feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line bordering the residentially zoned property. Parking areas shall be screened from the residentially zoned property by a solid decorative masonry wall that is a minimum of six feet in height.
  - b. Parking areas for nonresidential uses abutting or adjacent to non-residentially zoned property or a street shall install a landscape strip that is a minimum of five feet in width, excluding overhang, curb, and walkways, between the parking area and the common property line or the parking area and the street right-of-way. This requirement may be reduced or modified if a joint access agreement exists that is satisfactory to the Director of Community Development. Parking areas shall be screened from streets through combinations of plant materials, earth berms, raised planters, grade separations, or low walls. Slopes shall not exceed three to one or exceed 36 inches in height measured from the parking lot surface.
  - c. Plant materials, walls, or structures within a traffic sight area shall not block sight lines from driveways to streets and shall not exceed 36 inches in height.
  - d. End of aisle spaces adjacent to landscape finger shall be two feet wider for step out area.
3. Parking area interior landscaping.
  - a. Tree number and location. One tree shall be provided for each four parking spaces and shall be evenly spaced throughout the interior parking area at a rate of one tree for every eight parking spaces. See Exhibit 12-4 Parking Lot Landscaping. The required number of trees in the interior area shall not include trees required around the parking area perimeter. Trees are not required for tractor-trailer parking. A minimum of one cluster of trees shall be provided for each 100 feet of a row or double row of parking space. Trees shall be located in planters that are bounded on

at least two sides by parking area paving. Planters shall have a minimum exterior dimension of five feet.

Exhibit 12-4 – Parking Lot Landscaping.

- b. Tree size. All trees within the parking area shall be a minimum 24-inch box container at time of planting.
  - c. Landscape protection. Landscaping shall be protected by concrete curbs of at least six inches in height. An end-of-aisle planter shall be provided at the ends of all parking aisles. Finger aisle planters shall be a minimum of nine feet wide and end-of-aisle planters shall be a minimum of seven feet wide, as measured from the inside of the curb. The parking space side of finger and end-of-aisle planters shall have a 24-inch wide concrete surface measured from the face of the curb. Planters shall be landscaped with a mixture of trees, shrubs, and ground cover. Planting areas shall have round corners instead of 90 degree corners and shall be shaped to allow vehicle movements. The Director of Community Development may approve alternative barriers designed to protect landscaped areas from vehicle damage. Wheel stops may be placed to allow for two feet of vehicle overhang area within the dimension of the parking space. To increase the parking lot landscaped area, a maximum of two feet of the parking stall depth may be landscaped with low-growth, hardy materials in-lieu of paving, allowing a bumper overhang while maintaining the required parking dimensions. However, the overhang area shall not be counted as part of the minimum landscape area required by paragraph (1) above, and when adjacent to a required landscaping strip shall be in addition to the minimum required width. Fixtures (e.g., lights, sprinklers) that are higher than the curb are prohibited within a bumper overhang area. Curbing that creates a bumper overhang barrier shall not exceed a height of five inches.
  - d. Parking areas with more than 100 spaces shall provide an appropriate entry feature consisting of a concentration of landscape elements, including trees, flowering plants, enhanced paving, and project identification.
4. Parking structures. A landscaping strip 10 feet wide shall be provided on all sides of a parking structure. One tree shall be provided for each 20 to 40 feet of perimeter of the

structure, based on species selected. These trees shall be distributed evenly throughout the subject landscape area.

## 12.7 Sign Standards

### A. Applicability

This section contains standards and guidelines for signage to ensure that signs are consistent with the overall quality and character of anticipated new development. Regulations identify permitted sign types; provide standards for number of signs, size, and location; and provide design guidelines for color, materials, and illumination. Refer to the Fontana Municipal Code for all sign-related information or regulations not specifically addressed in this section.

### B. Standards and Guidelines

1. Standards. The following standards shall apply to all signs, regardless of type:
  - a) Sign types not listed in this Section are not permitted.
  - b) Linear Frontage Ratio. For each establishment, one and one-half (1 ½) square feet of total sign area shall be allowed for each linear foot of building frontage. Unless otherwise noted, all signs (including temporary signs) shall count toward the total sign area permitted based on the Linear Frontage Ratio. For multi-tenant buildings, each establishment shall be calculated individually. For corner establishments, each facade shall be calculated individually. Permitted sign area based on the linear frontage of one establishment or facade shall not be placed on another establishment or facade.
  - c) Signs shall not be animated.
  - d) Commercial messages that identify, advertise, or attract attention to a business, product, service, or event or activity sold, existing, or offered elsewhere than upon the same property where the sign is displayed are expressly prohibited.
  - e) In the event of a conflict between this Section and any other City regulation, the provisions of this Section shall apply.
  - f) All issues not specifically addressed herein (e.g., signage in the public right-of-way, exempt signs, permit processing, etc.) shall be addressed pursuant to the Fontana Municipal Code.
2. Guidelines. The following guidelines shall apply to all signs, regardless of type.
  - a. Design Compatibility
    - Provide signage that is compatible with the building architecture and coordinate sign materials and colors with the building facade/storefront design.
    - Place signs in accordance with facade rhythm, scale, and proportion.

- Ensure that signs associated with multi-tenant buildings are complementary to one another. A consistent location for tenant identification signs is recommended.

b. Location

- Signs shall be placed at or near the public entrance to a building or main parking area to indicate the most direct access to the business.
- Signs shall not be located so that they cover or interrupt the architectural details or ornamentation of a building's facade.
- Signs shall not project above the edge of the rooflines and shall not obstruct windows and/or doorways.

c. Sign Legibility

- Avoid hard-to-read, intricate typefaces. Typefaces that are difficult to read reduce the sign's ability to communicate.
- Avoid spacing letters and words too close together. Lettering shall not occupy more than 75 percent of the sign face.
- Limit the number of lettering styles in order to increase legibility. Signs shall be limited to no more than two styles for small signs (generally up to 10 square feet) and three styles for larger signs.
- Use significant contrast through incorporating light colored letters and a darker, contrasting background to provide the most visible and best-looking image.
- Incorporate business identity symbols and logos.
- Logo means any symbol or any combination thereof adopted and used by an individual or corporation to identify goods made or sold or services rendered by an individual or corporation and to distinguish them from goods made or sold or services rendered by others and that is nationally or State of California registered.

d. Color and Materials

- Bright day-glo (fluorescent) colors shall be avoided as they are distracting and do not blend well with other background colors.
- Sign colors shall relate to and complement the materials or color scheme of the buildings, including accent and trim colors.
- Sign materials shall be selected with consideration for the architectural design of the building's façade and also contribute to the legibility of the sign.
- Construct signs of durable, high-quality materials.
- Wood, paper, and cloth signs, and painted wall signs are prohibited.

e. Illumination

- Individually illuminated letters, either internally illuminated or back-lighted solid letters (reverse channel), are a preferred alternative to internally illuminated plastic-faced cabinet signs.

- Signs shall be comprised of individual letters.
  - The use of backlit, individually cut letter signs is strongly encouraged for all types of business and signs, including monument-type signs.
  - Whenever indirect lighting fixtures are used, care shall be taken to properly shield the light source.
- f. Electrical Raceways and Conduits
- Electrical transformer boxes and raceways shall be concealed from public view.
  - All exposed conduit and junction boxes shall be appropriately concealed from public view.

### C. Sign Types

For the purposes of this plan, Table 12-9 Sign Types indicates the signs that are allowed in the Speedway Industrial District.

| Table 12-9 Sign Types |                                                                                                               |
|-----------------------|---------------------------------------------------------------------------------------------------------------|
| 1                     | <b>Grand Projecting Sign</b><br>Hotels, movie theaters, live performance theaters                             |
| 2                     | <b>Marquee Sign</b><br>Movie theaters and live performance theaters with a capacity of 500 persons or greater |
| 3                     | <b>Grand Wall Sign</b><br>Non-residential uses with unfenestrated wall areas of 2,000 square feet or greater  |
| 4                     | <b>Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                               |

| 6                     | <b>Awning Valance Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 7                     | <b>Awning Side Sign</b><br>Non-residential uses with a dedicated ground floor entrance                        |
| 8                     | <b>Canopy Fascia Sign</b><br>Non-residential uses with a dedicated ground floor entrance                      |
| 9                     | <b>Under-Awning or Under-Canopy Sign</b><br>Non-residential uses with a dedicated ground floor entrance       |
| 10                    | <b>Recessed Entry Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 11                    | <b>Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                             |
| 12                    | <b>Temporary Window Sign</b><br>Non-residential uses with a dedicated ground floor entrance                   |
| 13                    | <b>Temporary Wall Sign</b><br>Non-residential uses with a dedicated ground floor entrance                     |
| 14                    | <b>Monument Sign</b><br>Any building with continuous linear street frontage of 200 feet or greater            |
| 15                    | <b>Freeway Adjacent Sign</b><br>Any parcel with continuous linear freeway frontage of 200 feet or greater     |
| 16                    | <b>Directional Sign</b><br>Each vehicle entrance                                                              |
| 17                    | <b>Accessory Sign</b><br>Identified specific uses                                                             |

## D. Sign Type Standards and Guidelines

This section provides Standards and Guidelines for each Sign Type.

### 1. Grand Projecting Sign

Grand Projecting Signs are tall, large, vertically-oriented signs that project from the building perpendicular to the façade and that are structurally integrated into the building.

#### a. Standards

- i. Only one (1) Grand Projecting Sign shall be permitted per establishment.
- ii. The Grand Projecting Sign area shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iii. Grand Projecting Signs shall be no taller than 30 feet from the bottom-most part of the sign to the tallest part of the sign.
- iv. Grand Projecting Signs may use animation provided such animation consists of flashing lights or chase lights only.
- v. Grand Projecting Signs shall project no more than six feet from the façade of the building.
- vi. No portion of a Grand Projecting Sign shall be lower than 12 feet above the level of the walkway over which it projects.
- vii. Letter width shall not exceed two-thirds (2/3) of the sign width.
- viii. No portion of a Grand Projecting Sign shall extend more than 10 feet above the roofline.

#### b. Commercial Guidelines

- i. Materials used in Grand Projecting Signs shall be metal and paint only.
- ii. Grand Projecting Signs shall be illuminated by exposed neon tube illumination or exposed incandescent bulb illumination only.
- iii. Letters shall be oriented right-side-up and stacked in a single upright row with the first letter being at the top of the sign and the last letter being at the bottom.

## 2. **Grand Wall Sign**

Grand Wall Signs are large signs located on, and parallel to, large unfenestrated building wall areas.

### a. Standards

- i. A Grand Wall Signs shall only be located on unfenestrated wall areas of 2,000 square feet in size or greater.
- ii. Only one (1) Grand Wall Sign shall be permitted per establishment.
- iii. The Grand Wall Sign area shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. A Grand Wall Sign shall not exceed 1,000 square feet or 25 percent of the total wall area, whichever is less.
- v. A Grand Wall Sign shall project no more than one (1) foot from the façade of the building.

### b. Commercial Guidelines

- i. Materials used in Grand Wall Signs shall be wood, ceramic, metal, or paint only.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

### c. Industrial Guidelines

- i. Materials used in Grand Wall Signs shall be ceramic or metal.
- ii. Grand Wall Signs shall be illuminated by external illumination only.

## 3. **Wall Sign**

Wall Signs are signs that are located on, and parallel to, a building wall. Business Identification Wall Signs are signs that announce the name of a business within a building and Building Identification Wall Signs are signs that announce the name of a building. Both are located on, and parallel to, a building wall.

2) Grand Wall Sign.

a. Standards

- i. Wall Signs shall be located below the second floor and within the middle 50 percent of the building or tenant frontage measured from lease line to lease line. Building Identification Wall Signs shall be located only on the frieze or fascia (articulated banding across the top of every building floor) area of storefront level; frieze, fascia, parapet of the uppermost floor; or above the entrance to main building lobby.
- ii. No Wall Sign shall exceed 150 square feet in size. Building Identification Wall Signs shall be no taller than 24 inches in height.
- iii. Wall Signs shall count towards the total sign area permitted based on the Linear Frontage Ratio, except that the area of Building Identification Wall Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. The following types of establishments may use animated Wall Signs:  
night clubs, movie theaters, and live performance theaters with a capacity of greater than 200 persons. Animation for these establishments shall consist of flashing lights or chase lights only. Building Identification Wall Signs shall not be animated.
- v. Wall Signs shall project no more than one (1) foot from the façade of the building.

3) Building Identification Wall Sign.

3) Business Identification Wall Sign.

b. Commercial Guidelines

- i. Materials used in wall signs shall be wood, ceramic, and/or metal, except that theaters with a capacity of greater than 200 persons may use plastic or acrylic for readerboards. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall signs shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only. Building Identification Wall Signs shall be illuminated by external illumination or halo illumination only.

- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. New wall signs for individual businesses in a shopping center shall be placed consistent with the location of signs for other businesses in the center. This will establish visual continuity among storefronts and create a unified appearance for the center.
- v. When signs that are attached to a wall are removed, holes and other disfigurations of the wall's surface shall be patched and painted to match surrounding areas.

c. Industrial Guidelines

- i. Materials used in wall signs shall be ceramic, and/or metal. Wall signs may also be inscribed into the façade of the building. Building Identification Wall Signs shall be inscribed into the façade or constructed of individual metal letters.
- ii. Wall signs shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only. Building Identification Wall Signs shall be illuminated by external illumination or halo illumination only.
- iii. Where individual letters are used, letters shall be three-dimensional, created by raised letter forms mounted to the building façade or sign panel, or by incised openings cut out from the sign panel.
- iv. When signs that are attached to a wall are removed, holes and other disfigurations of the wall's surface shall be patched and painted to match surrounding areas.

**4. Projecting Sign**

Projecting Signs are signs that are oriented perpendicularly to the building façade and are either (1) suspended under a bracket, armature, or other mounting device or (2) are cantilevered (i.e., structurally affixed to the building).

a. Standards

- i. Projecting Signs shall only be mounted on the wall area below the second floor.

4) Suspended Projecting Sign.

- ii. No Projecting Sign shall exceed 16 square feet in size.
- iii. Projecting Signs shall project no more than four feet from the façade of the building.
- iv. No portion of a Projecting Sign shall be lower than eight feet above the level of the walkway over which it projects.

b. Commercial and Industrial Guidelines

- i. Projecting Signs that are suspended under a bracket, armature, or other mounting device should be wood, or metal and shall be illuminated by external illumination only.
- ii. Projecting Signs that are cantilevered signs shall be wood, ceramic, metal, and paint only and shall be illuminated by external illumination, exposed neon tube illumination, exposed incandescent bulb illumination, or halo illumination only.
- iii. Sign supports and brackets shall be compatible with the design and scale of the sign and the architectural design of the building.

4) Cantilevered Projecting Sign.

**5. Awning Valance Sign**

Awning Valance Signs are signs applied to the awning valance and are contained completely within the valance.

a. Standards

- i. Lettering for Awning Valance Signs shall include one (1) line of lettering not to exceed two-thirds ( $2/3$ ) the height of the valance or 12 inches, whichever is less.
- ii. Awning Valance Signs shall project no farther from the building than its associated awning.
- iii. No portion of an Awning Valance Sign shall be less than eight feet above the level of the walkway over which it projects.

5) Awning Valance Sign.

b. Commercial and Industrial Guidelines

- i. Awning Valance Signs shall consist of metal, or vinyl or paint applied directly to the awning.
- ii. Awning Valance Signs shall be illuminated by external illumination only.
- iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings

are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.

- iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.
- v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
- vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

## **6. Awning Side Sign**

Awning Side Signs are signs applied to the side panel of an awning.

- a. Standards
  - i. The area of Awning Side Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
  - ii. Lettering for Awning Side Signs shall not exceed 12 inches in height with total sign area not to exceed 20 percent of the area of the awning side area.
  - iii. Awning Side Signs shall project no farther from the building than its associated awning.
  - iv. No portion of an Awning Side Sign shall be less than eight feet above the level of the walkway over which it projects.

6) Awning Side Sign.

- b. Commercial and Industrial Guidelines
  - i. Awning Side Signs shall consist of vinyl or paint applied directly to the awning.
  - ii. Awning Side Signs shall be illuminated by external illumination only.
  - iii. The shape, design, and color of awnings shall be carefully designed to coordinate with, and not dominate, the architectural style of the building. Where multiple awnings are used on the building, the design and color of the sign awnings shall be consistent with all other awnings.
  - iv. The use of temporary signs/letters on awnings is not allowed. Only permanent signs that are an integral part of the awning or canopy shall be used.

- v. The use of adhesive/press on lettering is not allowed. Awning signs shall be painted directly on the canvas awning.
- vi. To avoid having to replace awnings or paint out previous tenant signs when a new tenant moves in to a building, the use of replaceable valances shall be considered.

## 7. Canopy Fascia Sign

Canopy Fascia Signs are signs that are mounted to the front or side fascia of a canopy and contained completely within that fascia.

- a. Standards
  - i. The height of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) the height of the fascia or 12 inches, whichever is less.
  - ii. The width of Canopy Fascia Signs shall not exceed two-thirds ( $2/3$ ) of the canopy width.
  - iii. Canopy Fascia Signs shall project no farther from the building than its associated canopy.
  - iv. No portion of a Canopy Fascia Sign shall be less than eight feet above the level of the walkway over which it projects.
  - v. Canopy Fascia Signs shall consist of only one (1) line of lettering articulated as individual letters mounted directly to the canopy.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Canopy Fascia Signs shall be metal and paint only.
  - ii. Canopy Fascia Signs shall be illuminated by external illumination only.

7) Canopy Fascia Sign.

## 8. Under-Awning or Under-Canopy Sign

Under-Awning or Under-Canopy Signs are signs that are suspended under an awning or canopy, perpendicular to the building facade.

### a. Standards

- i. Under-Awning or Under-Canopy Signs shall be located adjacent to a public entrance.
- ii. No more than one (1) Under-Awning or Under-Canopy Sign shall be permitted per establishment per façade.
- iii. The area of Under-Awning or Under-Canopy Signs shall not count towards the total sign area permitted based on the Linear Frontage Ratio.
- iv. Under-Awning or Under-Canopy Signs shall not exceed three (3) square feet in area.
- v. Under-Awning or Under-Canopy Signs shall project no farther from the building than its associated awning or canopy.
- vi. No portion of an Under-Awning or Under-Canopy Sign shall be less than eight feet above the level of the walkway over which it projects.

8) Under-Awning Sign.

### b. Commercial Guidelines

- i. Materials used in Under-Awning or Under-Canopy Signs shall be wood, metal, and paint only.
- ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.

### c. Industrial Guidelines

- i. Materials used in Under-Awning or Under-Canopy Signs shall be metal and paint only.
- ii. Under-Awning or Under-Canopy Signs shall be illuminated by external illumination only.

8) Under-Canopy Sign.

## 9. Recessed Entry Sign

Recessed Entry Signs are signs that are oriented parallel to the building façade and that are suspended over a recessed entry.

- a. Standards
  - i. No Recessed Entry Sign shall exceed twenty (20) square feet in size.
  - ii. Recessed Entry Signs shall not project beyond the façade of the building.
  - iii. No portion of a Recessed Entry Sign shall be lower than eight feet above the level of the walkway.
- b. Commercial Guidelines
  - i. Materials used in Recessed Entry Signs shall be wood, metal, and paint only.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.
- c. Industrial Guidelines
  - i. Materials used in Recessed Entry Signs shall be metal and paint only.
  - ii. Recessed Entry Signs shall be illuminated by external illumination only.

9) Recessed Entry Sign- Section View.

9) Recessed Entry Sign- Elevation View.

## 10. Window Sign

Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window.

- a. Standards
  - i. Window Signs shall be permitted on windows below the second floor level only. A Window Sign that only identifies a building shall be located on a transom window above a primary entrance, or the glazed area of primary door.
  - ii. Window signs shall count towards total sign area permitted based on the Linear Frontage Ratio, except that the area of a Window Sign that only identifies a building shall not count towards the total sign area permitted based on the Linear Frontage Ratio. One (1) Window Sign that only identifies a building shall be permitted per building per street-facing façade.

10) Window Sign.

- iii. No more than 25 percent of any individual window area shall be covered or otherwise occupied by signage.
- iv. The letter height of each Window Sign shall not exceed 12 inches and shall be taller than four inches.

**b. Commercial and Industrial Guidelines**

- i. Ground-floor Window Signs shall consist of vinyl or paint applied to the glass, neon mounted or suspended behind the glass, or framed and mounted paper signs. Window Signs that only identify a building shall consist of vinyl or paint applied to the glass only.
- ii. Ground floor Window Signs shall be illuminated by exposed neon tube illumination only. A Window Sign that only identifies a Building Identification shall not be illuminated.

10) Building Identification Window Sign.

**11. Temporary Window Sign**

Temporary Window Signs are signs that are applied directly to a window or mounted or suspended directly behind a window and are designed, constructed, and intended for display on private property for a period of not more than 90 consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal signage.

**a. Standards**

- i. Temporary Window Signs shall be located only on ground floor windows on building facades that face a public street or a parking lot.
- ii. Temporary Window Signs shall not exceed six square feet in size.
- iii. Temporary Window Signs shall not cause the total amount of the window area covered with signage to exceed 25 percent.
- iv. Temporary Window Signs that satisfy the above standards and General Standards do not require a permit.

11) Temporary Window Sign.

- b. Commercial and Industrial Guidelines
  - i. Temporary Window Signs shall be constructed of paint applied directly to the glass or framed paper signs placed behind the glass.
  - ii. Temporary Window Signs shall not be illuminated.
  - iii. Temporary Window Signs that satisfy the above guidelines and General Guidelines do not require a permit.

## 12. Temporary Wall Sign

Temporary Wall Signs are signs that are located on, and parallel to, a building wall and are designed, constructed, and intended for display on private property for a period of not more than ninety (90) consecutive days per year. Examples include “grand opening”, “special sale,” and seasonal temporary banner signage.

12) Temporary Wall Sign.

- a. Standards
  - i. Temporary Wall Signs shall only be mounted on a wall area below the second floor level that faces a public street or a parking lot.
  - ii. A maximum of one (1) Temporary Wall Sign is allowed per establishment.
  - iii. No Temporary Wall Signs shall exceed 32 square feet in area.
  - iv. Temporary Wall Signs shall project no more than one (1) foot from the façade of the building.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Temporary Wall Signs shall consist of a flexible vinyl material with grommet holes installed around the edges to accommodate attachment to a building.
  - ii. Temporary Wall Signs shall not be illuminated.

### 13. Monument Sign

A Monument Sign is a freestanding sign supported by a solid architectural element at its base.

a. Standards

- i. A maximum of one Monument Sign is allowed per street frontage for single-purpose buildings, multi-tenant buildings or complexes and shopping centers on a -parcel with one or more street frontages of at least 100 feet.
- ii. A Monument Sign shall not exceed eight feet in length or six feet in height.
- iii. Monument Signs shall be placed perpendicular or parallel to the street. The base of a Monument Sign shall be set back a minimum of five feet from any public right-of-way or interior property line; a minimum of 10 feet from the edge of a driveway; and a minimum of 50 feet and from any Monument Signs or Pylon Signs on adjoining sites. Monument Signs shall not block sight lines at entry driveways and circulation aisles.
- iv. The sign copy for a Monument Sign shall only identify the name of the center, complex, or building and the address; however, the name of the primary tenant, if any, may be included in the copy. The minimum letter size allowed shall be six inches. Sign copy shall not be located closer than one half-letter height to the sign edge or other line of copy. Between 5 to 10 percent of the sign area should be dedicated to identification of the street address.
- v. The area of Monument Signs shall not count towards the total sign area permitted based upon Linear Frontage.
- vi. Monument Signs shall not project over any on-site driveway or vehicle circulation area.
- vii. Landscaping with automatic irrigation shall be provided at the base of the supporting structure equal to twice the area of one face of the sign or 75 square feet, whichever is greater. For example, 40 sq. ft. of sign area = 80 sq. ft. of landscaped area.

b. Commercial and Industrial Guidelines

- i. Monument Signs may be illuminated; however the sign copy should be the only portion of the sign face that is illuminated. The sign background or field shall be opaque with a nonglossy, nonreflective finish.

13) Monument Sign.

- ii. The sign area and height of the sign shall be in proportion to the site and surrounding buildings. Signs shall not be overly large so as to be a dominant feature of the site.
- iii. Monument Signs shall incorporate architectural elements, details, and articulation as follows:
  - Provide a solid architectural base that supports the sign. The base shall be a minimum of one-foot in height.
  - Provide architectural elements on the sides and top to frame the sign pane(s). Use columns, pilasters, cornices, and similar details to provide design interest.
  - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
  - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with its adjacent building(s).

#### 14. Freeway Adjacent Sign

A Freeway Adjacent Sign is an on-site sign of a pylon-type design that is oriented towards traffic traveling on the I-10 freeway.

##### a. Standards

- i. One Freeway Adjacent Sign is allowed for single-purpose buildings, multi-tenant buildings, or complexes with at least 20,000 square feet of building area on a parcel that has at least 200 linear feet of continuous frontage along the I-10 freeway easement or right-of-way and is at least four net acres in size. A parcel with a Freeway Adjacent Sign shall not be permitted any other freestanding sign of any type.
- ii. Freeway Adjacent Signs shall not exceed 200 square feet in area and a maximum height of 40 feet. If additional sign height and/or area is requested, the Planning Commission, at the Planning Commission's discretion, may approve additional sign height and/or area (up to a maximum height of 50 feet and maximum sign area of 250 square feet) after either or both of the following modeling simulations is conducted by the applicant as a part of the Design Review:

14) Freeway Adjacent Sign.

- A “flag test” to simulate the visual impact of the proposed sign structure;
- A line of sight study to determine what size of sign could be seen from any given distance, and whether the additional height and/or area are warranted.

b. Commercial and Industrial Guidelines

- i. Freeway Adjacent Signs may be illuminated; however the sign copy shall be the only portion of the sign face that is illuminated. The sign background or field should be opaque with a nonglossy, nonreflective finish.
- ii. The sign area and height of the sign should be in proportion to the site and surrounding buildings. Signs shall not be overly large so as to be a dominant feature of the site.
- iii. Freeway Adjacent Signs shall incorporate architectural elements, details, and articulation as follows:
  - The supporting structures of Freeway Adjacent Signs shall not include exposed metal pole(s), but shall be surrounded by a decorative cover that is architecturally compatible with the sign cabinet and the architectural character of buildings on the site.
  - Incorporate materials and colors into the sign support structures to match or be compatible with materials and colors of the development the sign serves so it does not appear out of scale with its adjacent building(s).
  - Keep the overall size of the sign in proportion with the development it serves so it does not appear out of scale with adjacent building(s).

### 15. Directional Sign

A Directional Sign is an on-premise sign giving directions, instructions, or facility information of an establishment (e.g., parking signs, exit and entrance signs, etc.).

15) Directional Sign.

- a. Standards
  - i. One (1) directional sign for each vehicle entry to a site with a maximum area of three square feet per sign. Maximum sign height shall be four feet. Additional directional signs may be allowed with approval of a Comprehensive Sign Program.
- b. Commercial and Industrial Guidelines
  - i. Directional signs and their supports shall use the same color palette of the proposed building.
  - ii. Directional signs shall be located to maintain sight lines along major circulation routes and should be illuminated for visual clarity and safety.
  - iii. Directional signs shall be designed with easy-to-read fonts, contrasting colors from the surrounding support panels, and durable materials.
  - iv. Double-sided parking directional signs shall incorporate messaging and direction arrows on both sides of sign.
  - v. Parking directional signage shall be used consistently throughout each individual development.

### 16. Accessory Signs

Accessory Signs are signs that provide incidental information about a project site or a business and its goods or services. For the purposes of this plan, Accessory Signs include:

- Directory Sign. A sign listing the tenants or occupants of a building or building complex.
- Fuel Price Sign. Fuel price signs only advertise the price and grade of fuel for sale at a service station.
- Nameplate Sign. A sign indicating the name and/or address of a building or occupant.
- Restaurant Menu Sign. Menus displayed on the exterior premises of a restaurant.

- a. Standards
  - i. The area of Accessory Signs shall not count towards the total sign area permitted based upon Linear Frontage.
  - ii. Directory Signs: Limited to a total sign area of 10 square feet.
  - iii. Fuel Price Signs: One per street frontage with a maximum sign area of 12 square feet and a maximum height of four feet. Fuel price signs shall only advertise the price and grade of fuel and no other advertising shall be allowed. Located in a landscaped planter with a minimum area equal to the area of the sign.
  - iv. Nameplate Sign: One non-illuminated sign not to exceed one square foot in area.
- b. Commercial and Industrial Guidelines
  - i. Materials used in Exempt Signs shall be wood and metal.
  - ii. Exempt Signs shall be illuminated by internal or external illumination as appropriate.

## ***12.8 Public Right-of-Way Streetscape***

This section establishes standards for streetscape landscaping improvements within the public rights-of-way along the major highways, primary highways, and secondary highways as identified in the General Plan, Circulation Master Plan, as well as district gateway/intersection enhancements. The intent of these streetscape improvement concepts and gateway enhancements is to provide a “sense of place” or identity, while interweaving the standards and tree palettes that may be provided by any overriding City Master Street Tree Plan.

### ***A. Street Classifications***

Streets within the SID are classified as follows:

- 1. Major highways:
  - a. Six-lane major highway – Cherry Avenue (north of Valley Boulevard).
  - b. Modified six-lane residential adjacent major highway – none within SID.
  - c. Modified six-lane no median major highways – Valley Boulevard.
  - d. Eight-lane major highways – Cherry Avenue (south of Valley Boulevard).
- 2. Primary highways – none within the SID.
- 3. Secondary highways – none within the SID.
- 4. Collector streets – Almond Avenue and Banana Avenue.

## **B. General Design Criteria**

The following general design criteria are intended to articulate consistent landscape treatments on similar classifications of corridors and provide a hierarchy of conceptual treatments for district gateway/intersection enhancements.

1. Landscaping should be used to accentuate and frame important view corridors.
2. Landscaping shall employ a common three-tiered approach to design:
  - a. Trees
  - b. Shrubs, vines and tall grass-like materials
  - c. Groundcovers (does not include turf)
3. Landscaping should be consistent and accentuated along arterial corridors and gateway intersections to emphasize district areas.
4. Street trees on major highways shall consist of on-center planting of deciduous trees in medians (whenever medians are required) and evergreen trees in parkways to provide seasonal variations of views during fall and winter months (clearer air and snow-capped peaks).
5. Gateway intersection enhancements should incorporate the adjacent property tree species (used in buffer setback) in order to provide background and screening, and include accent trees selected for their character and shape.
6. Primary and tertiary gateways will include thematic monumentation for district identification and reflect elements of local identity (i.e. river rock, concrete, City logo, etc.).
7. All gateway intersection enhancements shall incorporate decorative paving at corner areas and plant materials that promote the best of water-efficient landscaping.

## **C. Streetscape Concept**

The Streetscape Concept Plan for the entire Specific Plan area is shown on Exhibit 12.5. The plan identifies major, primary, and secondary highways, as well as collector streets and the gateway intersections within the Specific Plan area. Roadway classifications are consistent with the General Plan, Circulation Master Plan.

1. **Major Highway Streetscape.** Major highway streetscapes define the image of the City and its districts, while providing arterial linkages within and beyond the City. There are four streetscape concepts for major highways: Six-Lane Major Highway, Modified Six Lane No Median Major Highway, Modified Six Lane Residential Adjacent Major Highway, and Eight-Lane Major Highway. These major highway streetscapes are designed in response to special design needs, right-of-way, and adjacencies. Major highways within the SID are Cherry Avenue and Valley Boulevard. Streetscape cross-sections for these areas are shown in Exhibits 12-6, 12-7, and 12-8.

**2. Gateways.**

**A. Concept Plan**

The Streetscape Concept Plan Exhibit 12.5 identifies a hierarchy of primary, secondary, and tertiary gateways. The intent of the gateway intersection enhancements is to provide a visual statement that you are within the Specific Plan area.

The gateway intersection enhancements should all incorporate uniform treatments (to varying degrees) within expanded corner setback areas (45 degree diagonal right-of-way). Depending on the hierarchy level, each gateway shall include special corner/sidewalk paving, planting schemes that highlight drought tolerant species, and monumentation signage. Monument signs are optional on tertiary gateway intersections.

Each corner planting scheme shall incorporate the three-tiered planting concept, consisting of accent trees, shrubs, or tall grass-like plant material, and a ground cover. Dense planting of evergreen tree species consistent with adjacent buffer setback plantings shall provide a background/screen for each corner setback area.

Gateway conceptual designs with typical dimensions (plan views) are illustrated in Exhibits 12-9 and 12-10. The monument sign concept as it would appear in front of the planting treatment is illustrated in Exhibit 12-11.

Gateway enhancements and monument sign enhancements shall meet the City's line of sight regulations, as determined by the City Engineer. Dimensions of monument signs shall comply with Section 12.6.D.14.

***B. Dedication and Maintenance of Gateway Intersection Enhancements***

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for gateway intersection enhancements in Section 10.8 Public Right-of-Way, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standards indicated in Section 12.8 Public Right-of-Way Streetscape; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.
  - c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure the

installation and perpetual maintenance of the gateway intersection enhancements.

C.

Exhibit 12-5 – Streetscape Concept Plan

Exhibit 12-6 – Modified Major Highway – 6 Lanes – Cross Section A-A (Valley Boulevard)

Exhibit 12-7 - Major Highway – 8 Lanes – Cross-Section B-B (Cherry Avenue – South of Valley)

Exhibit 12-8 - Major Highway – 6 Lanes – Cross-Section C-C (Cherry Avenue – North of Valley)

Exhibit 12-9 – Primary Gateway Intersection Enhancement Concept

Exhibit 12-10 – Tertiary Gateway Intersection Enhancement Concept

*See Section 12.7.D.14 for dimension standards*

Exhibit 12-11 – Monument Sign Concept

#### 4. **Street Furniture**

Exhibit 12-12 – Street Furniture Palette, identifies recommended street furniture components, including lighting, trash receptacles, and benches, for the district. The palette is intended to ensure a unified visual identity for the district, which is distinct from the other districts within the Specific Plan area.

**Hi-Glo Series Pedestrian Lighting**  
by Landscape Forms

**Chase Park Series trash receptacle and bench**  
by Landscape Forms

Exhibit 12-12 – Street Furniture Palette

**C. Freeway Edges Design Criteria**

Freeway edges are an important part of the overall specific plan area and should be consistent with the overall Specific Plan landscape palette. General guidelines include:

1. A minimum of a 20-foot landscape zone (measured from the private property line to the I-10 freeway). Plantings should reflect the primary highway planting palette to the extent feasible.
2. Landscape treatments along the freeway corridor should serve as a windbreak to protect the sites from seasonal strong winds. Windbreak elements include a row of medium height (20 to 25 feet) dense trees, a row of taller trees (40 to 45 feet) and a row of medium height (8 to 10 feet) dense shrubs.
3. Undesirable views such as parking lots and loading/service areas visible from the I-10 freeway are prohibited.

## **12.9 Design Guidelines**

### **A. Design Objectives**

The Design Guidelines will promote and reinforce the City's commitment to high quality development. In general, the guidelines are intended to ensure that development preserves or improves the positive characteristics of the City's image. The objectives of these guidelines are to:

- Promote orderly development by implementing the SWIP Specific Plan objectives, policies, and principles.
- Protect and enhance property values by ensuring that development fits properly within the context of its surroundings and does not negatively impact adjacent uses.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian and motor vehicle circulation within a project and convenient pedestrian linkages to and from adjacent residential, commercial, industrial, and school areas.

### **B. Design Intent**

The SID encourages the use of auto-themed design elements to compliment the Speedway and create an aesthetically cohesive district. Design interface between varied uses and creating a welcoming, energized environment are important to the SID.

### **C. Industrial, Distribution, and Business Park Uses**

The design guidelines in this Subsection shall apply to industrial, distribution, and business park projects within this land use district.

## 1. Site Design

### Site Layout

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public realm.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street
  - Parking in front of building with a landscape buffer between parking and street. **See Figure 1.**

Figure 1. Appropriate building and landscape placement adjacent to public street.

- Visitor parking may be located at the front of the building adjacent to the main entry while employee parking and service areas are located at the sides and rear of the building. **See Figure 2.**
- Service and loading should not be located on building side(s) adjacent to a public street.

Figure 2. Parking layout.

- When buildings abut residential properties or the I-10 freeway, parking and loading areas should be located at the side of the building instead of the rear. The rear setback area shall be fully landscaped. **See Figure 3.**
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal containers are prohibited.
- Noise-generating activities and storage areas shall be located as far as possible from adjacent properties. Sound attenuation walls shall be used where appropriate to reduce noise.
- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. **See Figure 4.**

Figure 3. Fully landscaped setback adjacent to freeway.

Figure 4. Appropriate location of loading areas.

## Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.).
- Business park developments should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

## 2. Building Orientation

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets. **See Figure 5.**
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest, especially for development located along the I-10 Freeway. **See Figure 6.**
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings orientation shall be oriented to provide a buffer between sensitive uses and outdoor work areas, loading and storage.

Figure 5. Buildings are oriented to create gateway into development.

Figure 6. Buildings are oriented to provide architectural features visible from the freeway.

### 3. Site Elements

#### Fences and Walls

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way. **See Figure 7.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall.
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti. **See Figure 8.**

Figure 7. Tubular steel and stone pillars are appropriate fencing materials.

Figure 8. Wall is articulated with pillars and incorporates landscaping at the base and vines to deter graffiti.

#### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 9.**
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view, especially adjacent to the I-10 freeway.

Figure 9. Appropriate placement, orientation and screening of service areas.

- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from the I-10 freeway. **See Figure 10.**

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 11.**
- Trash enclosures shall integrate horizontal screening such as trellises.

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and adjacent to residential zones, and to prevent light spillover onto adjacent properties. **See Figure 12.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 13.**

Figure 10. Screening of roof mounted equipment.

Figure 11. Trash enclosure.

Figure 12. Hooded light fixture directs light downward.

Figure 13. Bollard lighting along pedestrian walkway.

- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building. **See Figure 14.**

Figure 14. Decorative light fixtures.

#### 4. Parking and Access

##### Parking

- Parking lots shall not be the dominant visual element on the site.
- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 15.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 16.**
- Parking shall be provided within walking distance of all tenants and public sidewalks.

Figure 15. Parking lot landscaping.

Figure 16. Pedestrian circulation is consistent along perimeter of parking lot.

- Parking lot design shall include water quality storm water facilities consistent with City standards. **See Figure 17.**

### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts. **See Figure 18.**
- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 19.**
- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

## 5. Architecture

### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses (e.g. residential, schools, etc.).
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 20.**

Figure 17. On-site stormwater capture system.

Figure 18. Shared parking access.

Enhance project entries with landscaping and special paving for visual impact.

Figure 19. Entry drive.

Figure 20. Incorporation of vertical offsets and material changes.

## Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest. **See Figure 21.**
- All building elevations, whether front, side, or rear shall be architecturally detailed.
- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 22.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 23.**
- The orientation of windows in buildings adjacent to a residential zone shall preclude a direct line of sight into residential properties.
- Primary building entries shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a building's entry. **See Figure 24.**

Figure 21. Façade articulation.

Figure 22. Use of cornices, window trim and grooves.

Figure 23. Enhanced corner elements.

Figure 24. Articulated Entries.

- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 25.**
- Locate and/or screen rooftop equipment so that it is not visible from the street. Rooftop screening shall be integral to the building's form.

Figure 25. Offset roof planes.

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged..
- Building materials shall be durable and able to withstand long-term exposure to the elements.
- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color. **See Figure 26.**
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.
- Use of building colors and materials that express an automobile-oriented theme are encouraged. This may include use of decorative elements such as checkered flags, building elements molded in the shape of automobile parts and other graphics.

Figure 26. Use of expansion joints.

## 6. Landscaping

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and be sized appropriately when it is fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) ground covers and flowering plants;
  - 2) shrubs and vines; and
  - 3) trees.

**See Figure 27.**

See recommended Plant Materials Palette in Table 12-6.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. Incorporation of appropriate public art is highly encouraged. .
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection.
- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.
- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls. Water features and public art are also encouraged. **See Figure 28.**

Figure 27. Three-tiered planting system: trees, shrubs, and ground covers.

Figure 28. Plaza area.

- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 29.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction. **See Figure 30.**

Figure 29. Wall incorporates landscaping to soften appearance and deter graffiti.

Figure 30. Plant material along buffer wall.

- Landscaping and trellises with vines are encouraged be used for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to residential zones shall include dense landscaping to provide visual screening and noise abatement.
- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 31.**

Wall, landscaping and berms screen industrial buildings and storage

Figure 31. Landscaped berms.

- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area. **See Figure 32.**
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/storm water treatment features and bio-swales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 33.**
- Trees shall be selected and placed to create canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

Figure 32. Landscaped parking lot.

Figure 33. On site water filtration.

## D. Commercial Uses

### 1. Site Design

#### Site Layout

- The arrangement of multiple buildings and associated circulation and parking shall reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas that enhance publicly-accessible spaces. **See Figure 34.**
- Loading areas, access and circulation driveways, trash enclosures, storage areas, and rooftop equipment shall be located as far as possible from adjacent residentially zoned properties.
- Site design shall take into consideration the public street and relationship to freeway access and adjacent uses.
- Buildings may be located adjacent to the street with a fully landscaped setback or buildings may be set back with limited parking in front. **See Figure 35.**

Figure 34. Site plan emphasizes pedestrian connectivity.

Figure 35. Limited parking adjacent to street with landscape setback.

#### Courtyards, and Plazas

- The organization and design of buildings shall encourage and facilitate pedestrian activity.
- Buildings should be organized to create usable open space, courtyards, plazas and dining areas. **See Figure 36.**

Figure 36. Buildings create courtyard.

- Pedestrian-oriented open spaces, courtyards and plazas shall include a focal element such as a sculpture and/or water feature and sitting areas. **See Figure 37.**

## 2. Building Orientation

- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Commercial buildings on corner parcels shall establish a strong tie to both streets and should encourage pedestrian activity at corner locations. **See Figure 38.**
- Buildings associated with service retail and restaurant uses shall be pedestrian-scaled, with entries fronting onto streets, plazas or courtyards to reinforce pedestrian orientation.
- Commercial development shall be oriented away from residential streets. At corner locations, if the side street primarily serves a residential neighborhood, development and access shall be oriented away from the side street.
- Buildings adjacent to sensitive uses (e.g. schools, residential zones) shall be buffered. This may be accomplished by providing masonry walls, landscaped berms, appropriate building orientation, building height stepbacks and limitations on activities adjacent to sensitive uses. **See Figure 39.**

Figure 37. Open plaza areas with seating.

Figure 38. Commercial/retail buildings on corners should establish strong tie to the street.

Figure 39. Masonry wall and landscaping separates uses.

- Commercial and retail buildings should generally be placed at or near setback lines with developments oriented in a manner that will provide visual interest, especially for developments located along I-10 Freeway.
- Buildings should be oriented in a manner that takes advantage of passive solar design to the maximum extent feasible.

### 3. Site Elements

#### Fences and Walls

- Wall heights and surfaces shall be articulated with varying façade depths or pilasters to promote architectural interest, and may include a cap along the top of the wall. **See Figure 40.**
- Walls visible from public streets shall be decorative and complement the design of on-site buildings.
- Wall and fencing materials may consist of brick, stone, stucco, wrought iron or tubular steel. Wall and fencing colors should match building colors, with neutral earth tones. **See Figure 41.**
- Walls and fences shall be integrated with landscaping along the base of the wall or fence. **See Figure 41.**

Figure 40. Wall incorporates pilasters and cap.

Figure 41. Stone wall.

## Screening

- Service and delivery areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from adjacent public streets. **See Figure 42.**
- Outdoor mechanical equipment shall be screened from public view, especially adjacent to the I-10 freeway.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from the I-10 freeway. **See Figure 43.**

Figure 42. Screened delivery area.

Figure 43. Screening of roof-mounted equipment.

## Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site.
- Trash enclosures visible from the public view shall integrate horizontal screening such as trellises.

## Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.

- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and the I-10 freeway and adjacent to residential zones, and to prevent light spillover into adjacent properties. **See Figure 44.**
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 45.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures. **See Figure 46.**
- Decorative light fixtures are encouraged, as long as fixtures are consistent with the architectural design of the building. **See Figure 47.**

#### 4. Parking and Access

##### Parking

- Parking lots should be designed with a clear hierarchy of circulation: major access drives with no direct access to parking spaces; major circulation drives with little or no parking; and parking aisles for direct access to parking.
- Large commercial and retail parking areas should be located behind building facades so as not to be visible from major streets.
- Parking lots shall not be the dominant visual element on the site.

Figure 44. Hooded light fixture directs light downward.

Figure 45. Bollard lighting along pedestrian walkway.

Figure 46. Pole mounted light.

Figure 47. Decorative light fixtures.

- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect. **See Figure 48.**
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat gain and the visual impacts of large parking areas.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 49.**
- Parking lot design shall include water quality storm water facilities consistent with City standards. **See Figure 50.**

#### Access - Vehicular

- Access to parking lots shall be from commercially developed streets to discourage cut through traffic from adjacent residential neighborhoods.
- Site access shall promote safety by providing an adequate stacking distance for vehicles between the back of the sidewalk and the first parking stall or circulation aisle.
- Conflict between vehicles and pedestrians shall be avoided at access driveways by providing a walkway on at least one side of the driveway.
- The number of access driveways shall be minimized and located as far as possible from street intersections.
- Site access locations shall be coordinated with existing or planned median openings and driveways on the opposite side of the roadway.

Figure 48. Landscaped parking lot.

Figure 49. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 50. On-site storm water capture.

- Unobstructed line of sight at corners and driveways shall be provided to reduce vehicular conflicts. **See Figure 51.**
- Avoid placing primary vehicle access in close proximity to major building entrances in order to minimize pedestrian and vehicular conflicts. **See Figure 52.**

### Access - Pedestrian

- Clearly defined pedestrian walkways or paths should be provided from parking areas to primary building entrances. Clear and convenient pedestrian access shall be provided between the public sidewalk and the pedestrian areas of the development. **See Figure 53.**
- Raised walkways, decorative paving, landscaping and/or bollards shall be used to separate pedestrian paths from vehicular circulation areas. **See Figure 54.**

Figure 51. Unobstructed sight lines.

Figure 52. Vehicle access is placed away from building entrances.

Figure 53. Clearly defined pedestrian walkways.

Figure 54. Raised walkway and landscaping in parking lot.

Parking areas should be designed so that pedestrians walk parallel to moving cars. **See Figure 55.**

### Loading and Delivery

- Loading and delivery service areas shall be located and designed to minimize their visibility, circulation conflicts, and adverse noise impacts to the maximum extent feasible.
- Loading and delivery service areas shall be screened with portions of the building, architectural wing walls, freestanding walls or landscape planting.
- When commercial buildings abut a residential zone or the I-10 freeway, loading areas shall not be visible from adjacent residentially-zoned properties or the I-10 freeway.
- Loading areas shall be designed to not interfere with circulation or parking, and to permit trucks to fully maneuver on the property without backing from or onto a public street. **See Figure 56.**
- Service, loading and delivery areas should take access from planned shared access points to reduce curb cuts along project frontages.

Appropriate

Inappropriate

Figure 55. Pedestrian circulation.

Figure 56. Loading area placed behind building outside of circulation lanes.

## 5. Architecture

### Mass and Scale

- The mass and scale of new developments shall be compatible with the existing, adjacent structures. This can be accomplished by transitioning from the height of adjacent buildings to the tallest elements of the new development by stepping back the upper portions of taller buildings.

- Human-scale elements, such as pedestrian-scaled doors, windows and building modules shall be used to emphasize pedestrian orientation.
- The size and location of various building elements (e.g., roofs, parapet walls, wing walls, etc.) shall be in scale to the building as a whole and provide visual interest. **See Figure 57.**

### Building Facades

- Buildings shall include enhanced and articulated facades along public streets.
- Design details shall be continued or repeated upon all building elevations .
- Building entrances should be readily identifiable. The use of recesses, projections, columns, and other design elements to articulate entrances are encouraged. **See Figure 58.**
- Facades shall provide visual interest with vertical and horizontal variations in wall and roof planes, building projections, door and window bays, arcades, and similar elements/techniques. **See Figure 59.**
- Buildings shall undergo a break in façade approximately every 40 feet, to create a varied wall surface along public areas. Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public right-of-way frontage.
- Buildings shall be well-articulated along the freeway frontage with a high degree of architectural detail.

Figure 57. Building elements add visual interest.

Figure 58. Building Entry.

Figure 59. Horizontal and vertical articulation.

- Buildings should include vertical elements (e.g., clock tower, building articulation) that create points of visual interest when viewed from the freeway.
- Roof designs that are visually interesting and designed to completely screen all rooftop equipment from public streets and freeway views are required. **See Figure 60.**
- The location of windows in commercial buildings adjacent to residential zones shall preclude a direct line of sight into residential properties.
- Buildings should use large windows along walls and skylights in rooftop designs to capture natural light during operating hours.
- The interior areas of commercial development should have shaded or covered walkways.

Figure 60. Full roof screens all equipment and provides visual interest.

### Storefronts

- Storefronts shall be comprised predominantly of transparent surfaces (windows). **See Figure 61.**
- The use of clear glass on the first floor is strongly encouraged.
- Storefront windows should be large and a minimum of 24 inches off the ground. The maximum bulkhead (wall plane between the ground and the bottom of the windows) height should be approximately 36 inches.
- Storefront entries should promote a sense of entry into the structure as well as provide a sense of shelter by incorporating elements such as overhangs, canopies, awnings, and recesses. **See Figure 62.**

Figure 61. Storefront windows.

Figure 62. Storefront overhangs provide a sense of shelter and entry.

- If security grilles are necessary, they shall be placed inside the building behind the window display area at a minimum distance of two feet behind the window.
- Product storage racks shall not block views through storefront windows.

### Colors and Materials

- The use of a coordinated three-color palette for the base color and major and minor trim accents is encouraged.
- Colors for all structures on-site should be varied and should consist of neutral, earthy tones. **See Figure 63.**
- Exterior finish materials shall be appropriate for the architectural style and/or theme of the entire development and should contribute towards a high-quality image. **See Figure 64.**
- Changes in materials shall occur at inside corners to make building volumes appear substantial.
- Materials shall be varied to provide architectural interest, however, the number of materials shall be limited and not exceed what is required for contrast and accent of architectural features.
- Exterior materials and architectural details shall relate to each other in ways that are traditional and logical. For example, heavy materials should appear to support lighter ones. **See Figure 65.**
- Use of building colors and materials that express an automobile-oriented theme are encouraged. This may include use of decorative elements such as checkered flags, building elements molded in the shape of automobile parts and other graphics.

Figure 63. Use of neutral, earth tones.

Figure 64. Exterior finish materials.

Figure 65. Heavy materials at base of building with lighter materials above.

## 6. Landscaping

### Plants and Irrigation

- Landscaping should help complete the design of the site and enhance the quality of commercial developments by framing and softening the appearance of buildings, screening undesirable views, and buffering incompatible uses.
- Landscaped areas should generally incorporate planting utilizing a three tiered system:
  - 1) ground covers (including flowering plants—annuals and perennials),
  - 2) shrubs and vines, and
  - 3) trees.

**See Figure 66.**

- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features. **See Figure 67.**
- Planting materials shall be used in plazas or gathering areas to provide shade and soften the appearance of hard surfaces. Water features and public art are also encouraged in these places. **See Figure 68.**
- Trees located along street frontages shall be selected to match or complement existing or proposed street trees in the public right-of-way.
- A minimum five-foot landscape strip shall be used along circulation aisles in parking lots, and along building side/rear elevations if a walkway is not used. A landscape strip is also encouraged in nonpublic areas and service areas between pavement and buildings.

Figure 66. Example of three tier landscape system.

Figure 67. Highlighting entry points.

Figure 68. Public plaza area within commercial development incorporates water feature.

- On-site water filtration features and bio-swales are strongly encouraged, and can also be used as buffering methods for adjacent businesses.
- Drought tolerant and low-water trees, vines, and groundcovers shall be used on-site. When feasible, drip irrigation systems shall be installed to provide on-site vegetation with appropriate irrigation and ensure the highest possible volume of water conservation.
- Planting materials shall be used to provide a buffer against noise, and may be integrated with walls or fences to achieve desired sound reduction and appearance.
- Tree and shrub planting shall be done in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection. Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

### Site Furniture

- Outdoor furniture and fixtures (e.g., lighting, directional signs, trellises, raised planters, works of art, benches, trash receptacles, fencing, etc.) shall be integral elements of the building and landscape design. **See Figure 69.**

Figure 69. Trellis.

- Outdoor furniture shall be of a sturdy construction to withstand daily use. Wood should be avoided.
- Outdoor furniture shall be located so it will not conflict with the pedestrian and motor vehicle circulation patterns. **See Figure 70.**
- Outdoor seating should be shaded.
- Site furniture that expresses an automobile-oriented theme is encouraged. This may include use of decorative elements such as checkered flags, furniture that repurposes or is molded in the shape of automobile parts, and other speedway-related graphics.

### Paving

- Decorative paving shall be incorporated into courtyards, plazas, pedestrian walkways, and crosswalks. **See Figure 71.**
- Paving materials shall complement the architectural design of the building and landscape design of the project. The use of stamped concrete, stone, brick, permeable pavers, exposed aggregate, or colored concrete is encouraged. The use of slippery materials (e.g., polished marble or granite) is prohibited.

Figure 70. Outdoor furniture outside of pedestrian walkway.

Figure 71. Enhanced paving in pedestrian areas.

### ***E. Flex-Tech Multi-Use Facility***

The design guidelines in this Subsection shall apply to all flex-tech projects within this land use district.

#### **1. Site Design**

##### **Site Layout**

- The arrangement of multiple buildings and associated circulation, and parking areas should reflect a well-organized site plan that emphasizes pedestrian connectivity and landscaped areas responsive to the public realm.
- Site development may utilize variations on building placement and landscaping adjacent to the public street. Appropriate configurations may include, but are not limited to the following:
  - Fully landscaped setback between building and street. **See Figure 72.**
  - Parking in front of building with a landscape buffer between parking and street.
- Visitor parking may be located at located near the front/visitor entries to the businesses, while employee parking and service areas are located at the sides and rear of the building.
- Service and loading area should not be located on building side(s) adjacent to a public street. Service and loading areas should be located to the rear of the buildings or in the interior of a multiple building complex. **See Figure 73.**
- When buildings abut residential properties or the I-10 freeway, parking and loading areas should be located at the side of the building instead of the rear. The rear setback area shall be fully landscaped.

Figure 72. Fully landscaped setback.

Figure 73. Loading and service areas accessed between buildings in a multiple building complex.

- Outdoor storage, work, and loading areas shall be incorporated within the building design and located to the rear or side of buildings and screened from view from adjacent public streets. Accessory buildings such as equipment enclosures or storage buildings should be minimized. These service areas should be incorporated into the building design to the greatest extent feasible. **See Figure 74.**
- The design and location of accessory buildings (e.g., security kiosks, maintenance buildings, and outdoor equipment enclosures) shall be incorporated into and be compatible with the overall design of the project and the main buildings on the site.
- With the exception of security kiosks, accessory buildings shall be located as far back from the front and street side setback area as possible.
- Sea/train-type metal containers are prohibited.
- Noise-generating activities and storage areas shall be located as far as possible from adjacent properties. Sound attenuation walls shall be used where appropriate to reduce noise.

### Courtyards and Plazas

- Buildings should be arranged to create opportunities for open space amenities (e.g., plazas, courtyards, outdoor eating areas, recreation areas, etc.). **See Figure 75.**
- Larger developments should provide recreational facilities (e.g., bicycle paths, tennis courts, volleyball courts, gymnasiums, etc.).

Figure 74. Appropriate location of loading areas.

Figure 75. Outdoor seating area provided between buildings.

## **2. Building Orientation**

- Multiple building developments should be oriented in a manner that will form gateways through facade enhancement, maximize public view, and capture public interest along adjacent major streets.
- Retail and office space should be located on the front of the building, visible from the public realm and adjacent to visitor parking. Flex areas used for warehousing, distribution, light manufacturing, research and development and other uses without a visitor component should be located to the sides or rear of the building.
- The organization of buildings, parking areas, and landscaping shall recognize the existing characteristics of the site and shall relate to the surrounding development in scale and character.
- Buildings should generally be placed at or near setback lines with development oriented in a manner that will provide visual interest, especially for development located along the I-10 Freeway.
- Buildings should be oriented in a manner that takes advantage of passive solar design.
- Buildings shall be oriented to provide a buffer between surrounding properties and outdoor work areas, loading, and storage.

## **3. Site Elements**

### **Fences and Walls**

- Walls and fencing materials shall consist of wrought iron, tubular steel, stone, stucco, or brick, and shall be compatible with the overall design character/style of the development. The use of chain-link fence material is not allowed if visible from the public right-of-way.

- Walls and fences shall be integrated with landscaping along the base of the wall or fence.
- Wall heights and surfaces shall be articulated with varying facade depths or pilasters to promote architectural interest, and shall include a cap along the top of the wall.
- Landscaping shall be used in combination with walls and fences to visually soften blank surfaces and to deter graffiti.

### Screening

- Loading bays and service areas shall be screened by building placement, decorative walls or landscaping to the fullest extent feasible so that views of loading areas are minimized from visitor areas and adjacent public streets.
- Trash storage enclosures and outdoor mechanical equipment shall be screened from public view, especially adjacent to the I-10 freeway.
- Roof-mounted equipment shall be screened from public view through use of parapet walls or other screening devices. Special consideration shall be given to the screening of roof-mounted equipment on building rooftops that are visible from the I-10 freeway. **See Figure 76.**

Figure 76. Screening of roof mounted equipment.

### Trash Enclosures

- Trash enclosures shall be incorporated as part of the building design.
- If trash enclosures cannot be located out of public view, the design of trash storage areas shall incorporate architectural screening elements and landscaping compatible with the design of buildings and landscaping on the site. **See Figure 77.**

Figure 77. Trash enclosures with architectural screening elements.

- Trash enclosures shall integrate horizontal screening such as trellises.

### Lighting

- Outdoor lighting plans shall take into consideration the location and potential growth pattern of nearby trees (existing and planned) so that appropriate lighting levels are maintained over time.
- Energy efficiency shall be considered through use of proper light location and placement, as well as use of energy-efficient bulbs or fixtures.
- Lighting fixtures shall include hoods or other design techniques to reduce glare and light pollution, especially along major streets and the I-10 freeway and adjacent to residential zones, and to prevent light spillover onto adjacent properties.
- Lighting shall be provided in project entryways, walkways, parking lots, and plazas or courtyards to promote safety. **See Figure 78.**
- Lighting may be mounted on poles or bollards, affixed to building walls, or placed within paved or landscaped areas. Appropriate materials and construction methods shall be used to ensure proper function of project lighting fixtures.
- Decorative light fixtures shall be consistent with the architectural design of the building.

Figure 78. Lighting along pedestrian walkway.

## 4. Parking and Access

### Parking

- Parking lots shall not be the dominant visual element on the site.

- Parking lots adjacent to and visible from public streets shall be appropriately screened to minimize undesirable visual impacts.
- Surface parking areas shall integrate trees and landscape improvements to reduce the heat island effect.
- Large parking lots (usually over 100 spaces) shall be divided into multiple, smaller areas and provided with canopy trees located throughout the parking area to reduce the effects of heat and the visual impacts of large parking areas.
- Employee parking areas should be located behind the building or alongside of the building so as not to be visible from adjacent streets.
- Internal vehicular and pedestrian circulation within a development involving multiple buildings or lots shall interconnect in an obvious and consistent manner. **See Figure 79.**
- Parking shall be provided within walking distance of all tenants and public sidewalks.
- Parking lot design shall include water quality stormwater facilities consistent with City standards. **See Figure 80.**

#### Access

- The use of common (shared) access points and driveways is encouraged; placement of vehicle access points close to building entries shall be avoided to minimize pedestrian and vehicular conflicts.
- Entry drives shall be clearly marked by special features, (e.g., enhanced paving, prominent landscape features, low-level decorative walls, and well-designed monument-type signs). **See Figure 81.**

Figure 79. Pedestrian circulation is consistent along perimeter of parking lot.

Figure 80. On-site storm water capture system.

Figure 81. Entry drive.

- Access to each development site shall be clearly visible to pedestrians and motorists.
- Service and loading areas should take access from shared access points to reduce curb cuts along streets.

### 5. Architecture

#### Mass and Scale

- The mass and scale of the buildings shall respect the visual and physical relationship to the adjacent buildings and surrounding sensitive uses. Taller building elements should be placed towards the center of the site, with lower elements adjacent to surrounding properties.
- Buildings should be stepped back when adjacent to or in close proximity to sensitive uses (e.g., residential, schools, etc.).
- Vertical and horizontal offsets shall be provided to reduce the visual bulk of the building. **See Figure 82.**
- Buildings should be designed to accommodate a wide range of uses, from office to small scale retail and service to light manufacturing. Interior spaces should allow for a variety of configurations, combining and dividing spaces as needed based on the uses.

Figure 82. Façade articulation.

#### Building Facades

- Building facades shall incorporate architectural elements such as windows, pillars, wall plane breaks to minimize blank walls and to create visual interest.
- All building elevations, whether front, side, or rear shall be architecturally detailed.

- Architectural accents (e.g., cornices, tiles, trim around windows, grooves in building faces, accent band details, bulkheads, etc.) shall be used to create variation along building facades. **See Figure 83.**
- Higher facades and rooftops should be incorporated at corners and intersections, and appropriate massing and scale shall be considered for the remainder of the building spanning public street frontage. **See Figure 83.**
- The orientation of windows in buildings adjacent to a residential zone shall preclude a direct line of sight into residential properties.
- Visitor entries to retail and office uses shall be easily identified through the use of prominent architectural elements, signage, landscaping, lighting, canopies, roof form, hardscape, architectural projections, columns, vertical elements, or other design features that help emphasize a space's entry. **See Figure 84.**
- Roofs shall be designed as an integral component of building form, mass, and facade. Building form should be enhanced by sloped or offset roof planes, eave heights, and rooflines. **See Figure 85.**

### Color and Materials

- Colors and materials for all structures on-site should consist of earth tones. Use of at least two to three different colors, materials or textures is encouraged.
- Building materials shall be durable and able to withstand long-term exposure to the elements.

Figure 83. Enhanced corner elements.

Figure 84. Awnings articulate entries to tenant spaces.

Figure 85. Offset roof planes.

- Large expanses of smooth material (e.g., concrete) shall be broken up with expansion joints, reveals, or changes in texture and color.
- To the fullest extent feasible, buildings should use large windows along walls and skylights in rooftop designs to capture natural light during working hours.

## **6. Landscaping**

- Landscaping shall be in scale with adjacent structures, streets, and public spaces, and shall be sized appropriately when fully grown.
- Landscaped areas should incorporate a three-tiered planting system:
  - 1) trees;
  - 2) shrubs and vines; and
  - 3) ground covers

See suggested Plant Palette in Table 6-6.

- Special landscape features, such as specimen trees, shall be provided at major focal points (e.g., project entries, building entries, and pedestrian gathering areas).
- Entry and exit points shall be highlighted through a combination of distinctive landscape and hardscape features.
- Development on corner lots shall be enhanced with a combination of specimen trees, accent plantings, upgraded perimeter wall surfaces, hardscape treatments and landscape lighting adjacent to the street intersection.
- Drought-tolerant and low-maintenance trees, vines, and groundcovers shall be used on-site. Drip irrigation systems shall be installed where feasible to ensure the highest possible level of water conservation.

- Planting materials shall be used in plaza areas to provide shade and soften the appearance of hard walls.
- The use of vines is encouraged on walls to soften the appearance of buildings and screen walls, and to help deter graffiti. **See Figure 86.**
- Planting materials shall be installed to provide a buffer against noise and should be integrated with walls or fences to achieve desired sound reduction.
- Landscaping and trellises with vines are encouraged for screening trash storage areas, service areas and mechanical equipment.
- Setbacks adjacent to residential zones shall include dense landscaping to provide visual screening and noise abatement.
- Landscaped berms along site edges may be used to screen parking, loading and service areas and to serve as a sound reduction measure. **See Figure 87.**
- Surface parking lots shall be well-landscaped to reduce heat island effect and visually reduce the expanse of paved area.
- Pervious paving materials are strongly encouraged for sidewalks, pathways, parking lots, plazas or gathering areas or other paved surfaces on-site.
- An automatic irrigation system using current equipment and technology shall be provided for planted areas.
- Run-off retention and on-site water filtration/stormwater treatment features and bioswales should be a part of the overall landscape design, and can also serve as buffering methods for adjacent businesses. **See Figure 88.**

Figure 86. Wall incorporates landscaping at the base.

Figure 87. Landscaped berm buffers parking.

Figure 88. On site water filtration.

- Trees shall be selected and placed to provide canopy and shade for walkways, pedestrian open spaces, and parking areas.
- Landscape material in the setback and visible from the public right-of-way shall blend with and seem a part of the public right-of-way landscaping.
- Tree and shrub planting shall be in large masses.
- Plant material selected shall be suited to the specific soil and micro climatic conditions.
- Trees shall be healthy and have a uniform branching pattern.
- All ground cover shall be healthy and densely foliated and comprised of well rooted cuttings or container plants.
- Availability and specific site conditions should be considered in final selection.
- Ground cover shall achieve 100% coverage in one year.
- Informal tree masses should be planted in a mix of sizes.

## F. Special Commercial Uses

### 1. Drive-Through Uses

#### Site Design

- The predominant feature along the street frontage should be the building, not parking lots or the drive-through aisle.
- The building shall be located to maximize the distance for vehicle queuing while screening the drive-through operations. **See Figure 89.**
- When adjacent to residential zones, outdoor order kiosks, loading/unloading areas, and storage areas shall be located as far as possible from residential properties.
- Drive-through aisles shall be located in the rear of the building away from the street frontage whenever possible. If the drive-through aisle is located between the building and the street, dense landscaping and landscaped berms or screen walls (42 inches high or less) shall be provided to screen the drive-through aisle from street view. **See Figure 90.**

Figure 89. Example of appropriately landscaped and screened drive-through aisle.

#### Building Design

- All building elevations shall receive the same level of architectural detailing.
- Buildings shall incorporate roof designs with built-in equipment wells or other built-in screening methods, so that screening devices do not appear added-on.
- If the drive-through facility is a pad building within a shopping center, the architecture shall relate to and be compatible with the design of the center. The only feature that identifies the franchise shall be the company's logo and signs.

Incorporate retail or other compatible uses on ground floor whenever possible.

Figure 90. Liner shops.

## 2. Parking Garages

### Site Design

- Where appropriate, parking garages should incorporate ground floor retail adjacent to the public sidewalk.
- A minimum 5-foot wide landscaped strip shall be provided on all sides of the parking structure except where ground floor retail space is provided.

### Building Design

- Parking garages shall be designed to help reduce the mass and scale of the garage and to ensure their compatibility with surrounding uses.
- Conceal view of vehicles in the garage through a combination of screen walls and plantings. **See Figure g1.**
- Avoid a monolithic appearance. This can be accomplished as follows:
  - Minimize horizontal and vertical banding by balancing both horizontal and vertical elements.
  - Use simple, clean geometric forms, and coordinated massing.
  - Step back upper levels of the garage 5 to 10 feet above the first floor. **See Figure g2.**
- Coordinate openings in the parking garage with the size and modulation of adjacent windows, structural bays, and storefronts if the parking garage contains other uses.
- Size openings in the parking garage to resemble large windows as in an office building.
- Use masonry materials that are predominantly light in color, but avoid unpainted concrete.

Figure g1. Parking structure with landscaping.

Figure g2. Horizontal and vertical articulation breaks up parking structure elevation.

- Avoid a sloping ramp appearance by providing level and uniform wall panels between floors.
- Visually define and differentiate between pedestrian and vehicular entrances through appropriate architectural detailing. **See Figure 93.**

Figure 93. Paving differentiates between pedestrian and vehicular entries.

### Access and Circulation

- Vehicle stacking areas for entering and exiting traffic shall be sufficient in length to minimize traffic backup into surrounding streets or within the garage. A minimum of two vehicle lengths of stacking distance shall be provided between the back of the sidewalk and the control gate.
- One inbound lane shall be provided for a garage with a capacity of up to 500 vehicles. At least two inbound lanes shall be provided for garages with a capacity of more than 500 vehicles.
- The maximum aisle length shall not exceed 400 feet without providing a cross aisle.
- Ramp grades shall not exceed 10 percent and parking areas shall not exceed a slope of four to five percent.

### Security and Lighting

- The design of the garage shall eliminate possible hiding places and openings that could allow random pedestrian access.
- During periods when parking activity is substantially less than the garage capacity (i.e., during night operations), there shall be a means of securing unused parking levels from use, including stairwells and elevators. If the garage is not operated on a 24-hour basis the entire facility shall be secured from access during hours when the facility is closed.

- For security reasons, at least one or two sides of the stair tower shall include glass running vertically the height of the tower. Elevators shall be provided with glass-back cabs and shafts. **See Figure 94.**
- Stairs and elevators shall be located adjacent to a street on the exterior of the structure where lobbies can be exposed to outside view.
- The use of security cameras is required.
- A minimum of five foot-candles shall be provided inside the structure and a minimum of three foot-candles for exterior parking areas. Higher levels are recommended for remote areas subject to security problems such as stairways, elevators, and other pedestrian access points.
- Lighting levels shall be equally distributed to provide uniform illumination over all parking areas.
- Light sources shall be shielded so that the source of the illumination is not seen from outside the structure.

### **3. Service Stations/Truck Stops**

#### **Site Design**

- The site shall be designed to accommodate anticipated circulation patterns and those patterns should be defined by paving and by well-placed landscaped areas.
- In areas developed with buildings adjacent to the sidewalk, service stations shall also be oriented to the sidewalk, placing any service bay door and car wash openings on the rear of the structure.
- Where commercial development abuts the service station, two-way vehicular access

Figure 94. Glass-back elevator cab and shaft.

integrated with the adjacent commercial development shall be provided where feasible.

- The site design for projects located at street corners shall provide a strong design element at the corner to help frame the public right-of-way and anchor the corner. **See Figure 95.**
- Parking spaces for vehicles left for repair shall be located in the least visible areas of the site and screened from public view.
- Service or car wash bays shall not face toward a public street or toward residential zone if the building is within 200 feet of a residential zone.
- Work bays shall be oriented so that the interior of the bays are not visible or audible from a public street, adjacent residential zones, or designated open space. **See Figure 96.**
- Each pump island shall include a vehicle stacking area for at least two vehicles (38-feet), on at least one end of the pump island and shall not restrict vehicle circulation and parking areas.
- A gasoline tanker truck unloading zone shall be provided and shall not obstruct vehicle circulation and parking areas.

Figure 95. Corner landscaping element.

Figure 96. Work bays face interior.

## Building Design

- Service station buildings shall be designed to complement and be compatible with the predominant architectural theme and scale of the area. If located within a multi-use center, the architectural design shall be compatible with the design of the center.
- The design of the building should be clean and simple, and shall relate to surrounding buildings through use of similar scale, materials, colors, and/or detailing.

- Building elevations facing public streets and residential zones shall be architecturally detailed to provide interest and the appearance of quality development.
- The roof design of service stations, including pump island canopies, shall incorporate full, pitched roof treatments with a low to moderate slope. **See Figure 97.**
- Building materials shall have the appearance of substance and permanency (e.g., masonry).

Figure 97. Sloped roof on pump island canopies.

### Landscaping and Walls

- A three-foot high, landscaped berm, a dense hedge, or a low-profile wall shall be provided along all street frontages where parking is provided. **See Figure 98.**
- A minimum 6-foot high decorative masonry wall shall be provided along side and rear property lines not abutting public streets. A minimum 5-foot wide landscaped planter shall be provided adjacent to the wall in areas accessible to the public.

Figure 98. Landscaped berm.

### Site Elements

- Gates, fencing, and walls shall remain free of signs or other advertisements.
- The use of chain-link fencing is prohibited.
- Where security is an issue, fencing shall consist of open grille work, and the use of surveillance cameras is encouraged.
- Electric fences, barbed-wire, concertina wire, or other security wire is prohibited.

## 5. Truck Stops

### Site Design

- The site shall be designed to accommodate anticipated circulation patterns and those patterns should be defined through paving and well-placed landscaped areas.
- In truck stops that provide maintenance facilities, any service bay doors and car wash openings shall be oriented away from the public street or freeway or placed to the rear of the site.
- The site design for projects located at street corners shall provide a strong design element at the corner to help frame the public right-of-way and anchor the corner.
- Parking spaces for vehicles left for minor repair shall be located in the least visible areas of the site and screened from public view.
- Truck stops shall be located within an industrial area within close proximity to an I-10 freeway on/off ramp.
- Service or car wash bays shall not face toward a public street nor toward a residential zone if the building is within 200 feet of a residential zone.
- Work bays shall be oriented so that the interior of the bays are not visible or audible from a public street, adjacent residential zones, or designated open space.
- A gasoline tanker truck unloading zone shall be provided and shall not obstruct vehicle circulation and parking areas.

### Building Design

- Truck stop buildings shall be designed to complement and be compatible with the predominant architectural theme and scale of the area.
- The design of the building should be clean and simple, and shall relate to surrounding buildings through use of similar scale, materials, colors, and/or detailing.
- Building elevations facing public streets and residential zones shall be architecturally detailed to provide interest and the appearance of quality development.
- The roof design of fueling stations, including pump island canopies, shall incorporate full, pitched roof treatments with a low to moderate slope.
- Building materials shall have the appearance of substance and permanency.

### **Landscaping and Walls**

- A three-foot high, landscaped berm or a dense hedge shall be provided along all street frontages where parking is provided.
- A minimum six-foot high decorative masonry wall shall be provided along side and rear property lines not abutting public streets. A minimum five-foot wide landscaped planter shall be provided adjacent to the wall in areas accessible to the public.

### **Site Elements**

- Gates, fencing, and walls shall remain free of signs or other advertisements.
- The use of chain-link fencing is prohibited if visible from a public street or the I-10 freeway.

- Where security is an issue, fencing shall consist of open grille work, and the use of surveillance cameras is encouraged.
- Barbed wire, electric wire, concertina wire, or other security wire is prohibited.

## 6. Shopping Centers

### Site Design

- Large commercial sites shall be separated from residentially-zoned properties by streets, landscaped buffers and/or decorative masonry walls.
- Portions of primary buildings and/or freestanding satellite buildings shall be located at the street setback lines to enclose the site and help frame the street. **See Figure 99.**
- Buildings within the center shall have a logical spatial and functional relationship to each other and shall provide for convenient pedestrian circulation throughout the center.
- Parking shall be provided within convenient walking distances of all tenants. Walking paths to buildings from the public street shall be provided. **See Figure 100.**
- To reduce the visual impact of large paved areas, parking lots shall be broken up into smaller areas separated by landscaping, pedestrian circulation areas and drive aisles.
- Storage areas and loading facilities shall be limited in number and shall be designed, located, and screened to minimize their visibility from outside public areas, surrounding streets, freeways, and freeway on/off ramps.

Figure 99. Buildings placed at street setback lines.

Figure 100. Walking paths.

■

## Building Design

- Buildings, hardscape, landscape, site furnishings and signage should reflect a unified theme. **See Figure 101.**
- Where a shopping center is adjacent to a residential zone, the scale of the shopping center shall be reduced to be compatible with the adjoining use by:
  - Keeping buildings as small as possible, particularly in height;
  - Reducing scale through building wall articulation, added detailing and avoiding large scale design elements;
  - Developing the center as a complex of smaller buildings connected by pedestrian-oriented open spaces; and
  - Setting the buildings further away from the residential zone and providing dense landscape screening.
- Long, linear buildings shall be avoided. Where such buildings are unavoidable, their length shall be mitigated by changes in building height, wall plane, and spatial volumes and by varied use of window areas, arcades, roof elements, and building materials. **See Figure 102.**
- If the shopping center contains a large scale building, integration of smaller-scale shops along the exterior of the building with entrances from the exterior of the building are desirable in order to create a more human scale and pedestrian-oriented character.
- Side and rear elevations of commercial buildings that are visible from residential zones or public rights-of-way shall be architecturally consistent with the front elevations of the building.
- Blank walls adjacent to main pedestrian areas shall be avoided.

Figure 101. Unified theme.

Figure 102. Articulation along wall plane.

- Flat roofs, mansard roofs, and veneer parapets are strongly discouraged in favor of full, pitched roof treatments. In large centers, a combination of flat roofs with decorative cornices and full, pitched roofs may be acceptable if the design presents a balanced appearance. **See Figure 103.**
- All roof-top and ground-mounted equipment shall be screened from view.
- Outdoor sales and storage areas shall be designed to blend with the architecture of the main building. The height of the screening elements shall be tall enough to screen all stored materials. **See Figure 104.**

Figure 103. Appropriate roofing.

Figure 104. Outdoor sales area.

### **12.10 Development Incentives**

This Section offers development incentives to produce greater land use efficiencies and reduce incremental costs for new development.

#### **A. Applicability**

The incentives in this Section shall apply to all new development that meet(s) the applicable eligibility criteria.

#### **B. Definitions**

For the purposes of this Section, lot consolidation shall have the following meaning:

1. Lot consolidation. A legal action in which a lot line is removed or abandoned; a lot line is adjusted; lots are merged; or other equivalent action is taken, for the purpose of allowing a structure or development to be built so that it extends over what were previously two or more separate lots. A lot consolidation cannot create additional lots and cannot make existing lots nonconforming. All lots must be identical in ownership.

#### **C. Lot Consolidation Incentives**

1. Eligibility requirements. In order to be eligible for the by-right development incentives indicated in Subparagraph 2, the minimum consolidated or integrated lot size for a development shall be 52,500 gross square feet.
2. By-right incentives. Eligible projects shall receive one or more of the following incentives:
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review), irrespective of the number of lots involved.
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 12.6 Parking and Loading Standards, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio [FAR]) and in maximum height shall be in the amounts listed in Table 12-10 Allowable Bonuses for Lot Consolidation. The intensity and height bonus incentives shall apply to the total gross square footage of the consolidated lots.

| Table 12-10<br>Allowable Bonuses for Lot Consolidation |                                  |                    |                               |
|--------------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                            | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.8                                                    | 15%                              | 60 ft              | 15 ft                         |

**D. Green Building Incentives**

1. Eligibility requirements. Projects that are seeking green building certification by a third-party entity (e.g., LEED, etc.) shall be eligible for the by-right development incentives indicated in Subparagraph 2.
2. By-right incentives.
  - a. Expedited application processing. Applications for eligible projects shall receive expedited project processing (i.e., projects will move to front of line for assignment to a planner for review).
  - b. Parking Reduction. Required parking standards may be reduced up to a maximum of 20 percent, provided that the adequacy of proposed parking can be demonstrated in a parking study prepared in compliance with Section 12.6 Parking and Loading Standards, as approved by the Director of Community Development.
  - c. Allowable Bonuses. Allowable increases in intensity (i.e., floor area ratio [FAR]) and in maximum height shall be in the amounts listed in Table 12-11 Allowable Bonuses or Green Building. The intensity and height bonus incentives shall apply to the total gross square footage of the project site.

| Table 12-11<br>Allowable Bonuses for Green Building |                                  |                    |                               |
|-----------------------------------------------------|----------------------------------|--------------------|-------------------------------|
| <i>Base Intensity (FAR)</i>                         | <i>Allowable Intensity Bonus</i> | <i>Base Height</i> | <i>Allowable Height Bonus</i> |
| 0.8                                                 | 15%                              | 60 ft              | 15 ft                         |

**e. Application and Review Process for Incentives**

1. Written submittal. Interested parties shall submit a written request for approval of incentives to the Director of Community Development on forms provided by the Community Development Department.
2. Determination. The Director of Community Development shall determine whether the proposed new development meets the eligibility criteria in Paragraphs C.1. or D.1. Additional factors to be considered when reviewing applications for incentives shall include the following:

- a. Detriment. The proposal will not detrimentally affect access, design, or other public safety and welfare concerns.
  - b. Covenants or conditions. The proposal will not violate restrictive covenants contained on the face of the final plat or conditions of plat approval.
  - c. Right-of-way easements. The proposal will not invalidate any easement(s) unless the adjustment establishes replacement easement(s) that is properly filed with the city.
- 4. Conditions. Conditions may be imposed in connection with the granting of any incentive where the Director of Community Development deems that conditions are necessary to protect the public health, safety, and welfare.

### **12.11 Entitlement Procedures**

#### **A. Purpose**

These administrative procedures have two major purposes:

1. Ensure that development conforms to the SWIP Specific Plan ("Plan").
2. Ensure that the City's review is as expedited as possible while remaining legal and proper.

#### **B. Summary of Processing Procedures**

1. Conformity with the Plan. The Director of Community Development shall review each application for conformity with the development regulations in this Chapter. Conformity has two components:
  - a. Standards. Compliance with the Standards is mandatory and the City may not approve a project that fails to comply with the Standards.
  - b. Guidelines. The City may exercise discretion in evaluating the project's compliance with the Guidelines.
2. Project Review. Applications for development approvals shall be filed with the Department and will be returned for revision. Applications must strive to meet the "Guidelines," but applicants may propose alternate ways to achieve the goals of the Guidelines.
3. Timing of Permits and Approvals. Required planning approvals shall be obtained before the issuance of any grading, building, or other construction permit, and before the proposed use is constructed, otherwise established, or put into operation.
4. Processing Requirements. Applications for planning permits shall be processed in compliance with Table 12-12 Hearing Bodies.
5. Timing of Project Review. Project review shall be required before the issuance of a Building or Grading Permit, Business License, or Certificate of Occupancy for any new structure (not including fences or walls) and/or existing structures to be reconstructed or remodeled (including facade improvements).

**Notes:**

Decisions of any "Reviewing Body" may be appealed to the City Council, except where State law limits such appeal to the City Engineer. If the Planning Commission is listed above as the "Appeal Body", the Commission must first review an Appeal before it may be forwarded to the City Council for consideration.

DAB—Development Advisory Board

CD—Community Development Director

PC—Planning Commission

CC—City Council

PR—Parks and Recreation Commission

X\*—At the discretion of the Director of Community Development or his/her designee

X\*\*—If Public Park(s) are considered

X\*\*\*—City Engineer has final approval

f—Recommending body to the City Council

**C. Administration and Enforcement**

The Director of Community Development shall enforce the provisions in this Specific Plan. All officers, employees, and officials of the City of Fontana, who are vested with the duty or authority to issue permits or licenses shall conform with this Specific Plan and shall not issue any permit or license, or approve any use or building, which would be in conflict with this Specific Plan. Any permit, license or approval issued that is in conflict with the requirements of this Specific Plan shall be considered null and void.

**D. Amendments to the Specific Plan**

The SWIP Specific Plan may be amended utilizing the same procedures by which it was originally adopted. In addition, subsequent amendments to this Specific Plan shall demonstrate the amendment meets the intent of the Specific Plan's existing policy framework, or specific findings to demonstrate the amendment enhances the Plan or is necessary to more effectively implement the Specific Plan. All sections or portions of the Specific Plan proposed to be amended or that may be affected by the amendment must be identified during the amendment process. A concurrent amendment to the General Plan would not be required provided that the Director of Community Development determines that substantive changes would not influence the goals, objectives, policies, or programs of the General Plan.

Allowing flexibility in the administration of the Specific Plan enhances the effectiveness of the Specific Plan as a comprehensive, "living" planning document. The following minor modifications to the Specific Plan qualify for processing as an administrative amendment to the Specific Plan subject to the review and approval of the Director of Community Development:

- Changes in the location of infrastructure and public facilities (e.g., internal roads, drainage facilities, etc.).
- Minor change in roadway alignment.

**E. Similar Use Determination**

1. **Applicability and Authority.** Unlisted uses in Table 10-2 are prohibited uses, unless the Director of Community Development finds a proposed use to be similar to an expressly allowed use. A Similar Use Determination is a process for determining when an unlisted use is similar in nature to a permitted or conditionally permitted use and may be permitted. As specified by Municipal Code Section 30-4 Other Uses to be Determined by the Director of Community Development, the Director of Community Development shall have the responsibility and authority to make Similar Use Determinations.
2. **Ministerial Action.** A Similar Use Determination shall constitute a ministerial action.
3. **Application Contents and Filing.** An application for similar use shall be in writing on forms provided by the Director of Community Development.

4. Determination Findings. In determining “similarity,” the Director of Community Development shall make all of the following findings:
  - a. The characteristics of and activities associated with the proposed use are equivalent to one or more of the listed uses and will not involve a higher level of activity or environmental impacts than the uses listed in the land use district;
  - b. The proposed use will be consistent with the purposes of the applicable land use district; and
  - c. The proposed use will be consistent with the General Plan and this SWIP Specific Plan.
5. Notice of Determination. A Similar Use Determination shall be made in writing and shall contain the facts that support the determination. The Community Development Department shall maintain all determinations on record for review by the general public upon request. The notice shall include:
  - a. A brief statement explaining the criteria and standards considered relevant to the decision;
  - b. A statement of the standards and facts relied upon in rendering the decision; and
  - c. An explanation of appeal rights and appeal deadlines. The determination of similar use by the Director of Community Development shall be subject to appeal to the Planning Commission.

**F. *Nonconforming Lots, Structures, and Uses***

1. Nonconformance provisions are established to:
  - a. Bring all uses, structures, sites and signs into conformance with the developmental requirements and design guidelines in the Code;
  - b. Limit the occurrences and extent of nonconformance by prohibiting expansion, intensification, reinstatement, alteration, restoration after destruction, and reestablishment after abandonment; and
  - c. Gradually phase out nonconforming uses, structures, lots and signs.
2. Applicability
  - a. Nonconforming uses, structures, signs and lots may be maintained, expanded, altered and/or abated only in accordance with the provisions of this Specific Plan.

- b. Any Designated Historic Landmark, or any property listed on the California Register of Historical Resources or National Register of Historic Places, shall be exempt from the provisions of this Section with respect to the restoration and maintenance of structures, provided that any construction plans are approved through a Certificate of Appropriateness by the Historic Preservation Commission/Planning Commission.
- 3. Nonconforming Uses. A use that lawfully occupied a building or land at the time this Specific Plan became effective, and that does not conform to the use regulations of the land use district in which it is located, is deemed a "legal nonconforming use." A legal nonconforming use may continue, subject to the following:
  - a. Discontinuation of Use
    - i. Loss of legal nonconforming status. If a legal nonconforming use is discontinued for a period of 90 or more days, regardless of the owner's intent, it shall lose its legal nonconforming status and the continued use of the property shall be required to conform to all provisions of this Specific Plan.
    - ii. Extension of legal nonconforming status. Wherein special circumstances exist, the Director of Community Development may extend the legal nonconforming status of a use, for up to an additional 90-day period. Furthermore, an additional extension may be granted by the Planning Commission, for up to an additional 90-day period. The total time period of all time extensions shall not exceed 180 days.
    - iii. Extension of legal nonconforming use.
      - (1) An application for a Minor Use Permit shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
      - (2) The application shall be reviewed by the Director of Community Development within 30 days following application filing. The Director of Community Development shall notify the applicant, in writing, as to whether the application is complete. If the application is not complete, the Director of Community Development shall specify those parts of the application that are not complete and shall identify the manner by which it can be made complete. If written notification is not provided to the applicant within 30 days following application filing, the application shall be deemed complete.
      - (3) The Director of Community Development shall investigate the facts bearing on the application and provide the information necessary for action on the application, consistent with this Specific Plan and the General Plan. The applicant shall have made a good faith effort

through the submittal of documentation and has diligently pursued compliance with this Specific Plan.

- (4) The application shall be reviewed by the Director of Community Development at a duly noticed public hearing, whom shall then approve, modify or deny such application. The decision of the Director of Community Development shall be final and conclusive in the absence of a timely filed appeal to the Planning Commission. An appeal of the Director of Community Development's decision shall be filed within 10 days from the date of the decision of the Director of Community Development. An appeal of the Director of Community Development's decision shall be reviewed by the Planning Commission. The decision of the Planning Commission shall be final and conclusive in the absence of a timely filed appeal to the City Council.
- (5) The applicant may appeal the decision of the Planning Commission to the final deciding body, the City Council. The City Council decision shall be final and conclusive. If the application to extend the legal nonconforming use is approved by the City Council, the extension shall be granted for 90 days from the date of approval.
- (6) If the Director of Community Development or appointed designee has determined that the applicant has failed to show a good faith effort towards continually processing the extension of legal nonconforming use application (i.e., revising plans, withdrawing the application, placing the project on hold, etc.), the legal nonconforming use shall cease within 60 days from the application submittal date.
- (7) In granting an extension of the legal nonconforming status, the Director of Community Development may attach reasonable conditions and restrictions to the request, in addition to those required by this Specific Plan, which will ensure that the use:
  - Will not endanger the public health, safety or general welfare;
  - Will not injure the value of adjoining or abutting property;
  - Will not result in any significant environmental impacts; and
  - Will be in harmony with the area in which it is located.
- (8) In approving an extension of the legal nonconforming status, the Director of Community Development or Planning Commission shall consider and clearly establish the following findings of fact:
  - The non-conforming use has been discontinued within the 90-day period.
  - A physical and/or economic hardship has prevented the nonconforming use from being in compliance prior to the expiration of the 90-day period;

- Approving the extension will not adversely affect the health, safety or general welfare.
  - b. Change in Ownership, Tenancy or Management. A change in ownership, tenancy or management of a nonconforming use shall not affect its legal nonconforming status, provided that the use did not discontinue pursuant to the section entitled "1) Loss of legal nonconforming status" or the type of use and/or intensity of use do not change.
  - c. New Development. New development on any lot or parcel upon which a legal nonconforming use exists shall require that all uses on the property conform to the provisions of this Specific Plan.
  - d. Alteration and Expansion of Use
    - i. A nonconforming use shall not be enlarged or extended in such a way as to occupy any part of any structure or property that it did not occupy prior to the creation of the nonconformity.
    - ii. A structure fully or partially occupied by any nonconforming use shall not be moved, altered or enlarged, unless required by law, or unless the moving, alteration or enlargement will result in the elimination of the nonconforming use.
  - e. Intensification of Use. A nonconforming use shall not be intensified in such a way as to increase the discrepancy between existing conditions and the standards set forth in this Specific Plan.
4. **Nonconforming Structures.** A structure lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of the land use district in which it is located, including setbacks, separations, height and design, is deemed a "legal nonconforming structure." A legal nonconforming structure may continue to exist, subject to the following:
- a. Damage or Destruction
    - i. A legal nonconforming structure that is damaged or partially destroyed by fire, flood, wind, earthquake or other calamity, or the public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented by reasonable care and maintenance of the structure, may be reconstructed up to the original size, placement and density, provided that total cost of such reconstruction does not exceed more than 50 percent of the structure's current fair market value. The structure may be restored and the nonconforming use may be resumed, provided that restoration is started within six months, unless extended by the Director of Community Development, and diligently pursued.

- ii. In the event that the cost of repairing such damage exceeds 50 percent of the current fair market value of the structure prior to such damage occurring, the structure may be reconstructed up to the original size, placement and density, subject to all of the following:
  - The Planning Commission, at a duly noticed public hearing, must find that continuing the nonconforming structure will not result in an annoyance to and/or reduction of any surrounding property; and
  - The extent of damage or partial destruction shall be based upon a comparison of the estimated cost of restoring the structure to its condition prior to such damage or partial destruction with its value at the time the structure was damaged or partially destroyed. Estimates for such purpose shall be made by or reviewed by the Building Official; and
  - The restoration is commenced within 6 months and diligently pursued to completion.
  - An application for a Nonconforming Structure shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Director of Community Development to process the application. The application shall be filed prior to the expiration of the 90-day period.
  - A structure or development that has been damaged or destroyed by fire, flood, wind, earthquake, or other calamity, or by public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented may be reconstructed up to the original size, placement and density, except a multiple family dwelling or development which has been abandoned for a period of 90 or more days prior to being involuntarily damaged or destroyed, or a multiple family dwelling or development constituting a public nuisance prior to being involuntarily damaged or destroyed may not be reconstructed unless the structure is made to comply to all provisions of this Specific Plan.
- b. Alterations and Expansion
  - i. A nonconforming structure shall not be moved, altered or enlarged so as to increase the discrepancy between existing conditions and the most current standard as prescribed by the land use district in which the structure is located, except alteration and/or enlargement to a single family dwelling conducted pursuant to section "e) Nonconforming Single-Family Residential Structures".
  - ii. Within land use districts, reasonable repairs and alterations may be made to legal nonconforming structures, provided that no structural alterations shall be made which would prolong the life of supporting members of a structure, such as bearing walls, columns, beams or girders. Structural elements may be

modified only if such modification or repair is immediately necessary to protect the public health and safety, occupants of the legal nonconforming structure, or adjacent property, as determined by the Building Official. The total cost of such repairs or alterations may not exceed 50 percent of the replacement cost of the nonconforming structure.

- c. **New Structures.** Any new structure constructed on a lot or parcel with an existing legal nonconforming structure shall be constructed in conformance with all applicable provisions of this Specific Plan. However, in no case may a new nonresidential structure be constructed on the same lot as an existing legal nonconforming residential structure.
        - d. **Abatement of Nonconforming Structures Posing a Threat to the Public Health, Safety and General Welfare.** A structure which is nonconforming because of a violation or deficiency that poses a threat to the public health, safety or general welfare, as determined by the Building Official, and which fails to resolve, repair or improve such, or to fully mitigate the hazard involved, shall be abated, condemned or demolished upon the issuance by the City of a nuisance abatement, condemnations or demolition order.
        - e. **Nonconforming Single-Family Residential Structures.** In addition to the requirements of subsections a and d above, a nonconforming single family residential lot and/or structure that was lawfully established and maintained before the adoption of this Specific Plan, but which under the provisions of this Specific Plan does not conform with the regulations of the land use district in which it is located with respect to use, design and/or development standards, and which is continuously used and maintained for single family residential purposes, shall be subject to the following:
          - i. **Alterations and expansions to structures within nonresidential zones.**
            - Necessary repairs and desirable alterations, as deemed appropriate by the Director of Community Development, may be made to a legal nonconforming single family residential structure that is nonconforming as to use.
            - A single family dwelling that is nonconforming as to its location within a land use district that does not permit single family dwellings, and in which the residential use was lawfully established and continuously maintained, shall be subject to the development regulations of the Municipal Code Chapter 30 Zoning and Development Code that pertain to the R1 zoning district and off-street parking and loading regulations.
  5. **Nonconforming Signs.** A sign lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of Section 12.7 Sign Standards, is deemed a "legal nonconforming sign." A sign that presents a hazard to public safety, as determined by the City, shall be removed upon the issuance of a

- notice by the City. A legal nonconforming sign may continue to exist, subject to the following:
- a. A nonconforming sign may not be altered, enlarged, extended, or moved, except in conformity with the requirements of Section 12.7 Sign Standards, or as otherwise required by law;
  - b. Where a use or a structure associated with a nonconforming sign is abandoned or discontinued, any sign associated with a new use of the site shall be in full conformity with the requirements of Section 12.7 Sign Standards.
6. **Nonconforming to Development Standards.** The development that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area, coverage, configuration, dimensions, parking, landscaping, screen walls, fences and enclosure trash receptacles, is deemed "legal nonconforming," provided such development was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
- a. A development that is nonconforming as to landscaping, screen walls, fences and enclosure of trash receptacles, shall be altered to comply with the district regulations covering the following standards, or as a condition of any subsequent Development Plan or Conditional Use Permit approval.
7. **Nonconforming Lots.** A lot or parcel that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area and configuration is deemed "legal nonconforming lot," provided such lot or parcel was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
- a. A lot or parcel that is nonconforming as to minimum area or dimension shall be granted all development rights and uses of the land use district within which it is located.
    - i. The landscaping of setback areas insofar as a setback exists;
    - ii. The landscaping of parking areas, provided fulfilling the requirement does not reduce off-street parking or loading spaces to fewer than prescribed in this Specific Plan;
    - iii. The screening of storage areas; and
    - iv. The enclosure of trash receptacles.
8. **Elimination of Nonconforming Adult Business Uses.** Nonconforming adult business uses shall be eliminated in compliance with Municipal Code Chapter 30 Zoning and Development Code.

## Chapter 13.0 – Residential Truck District

### **13.1 Purpose**

The Residential Truck District (RTD) is primarily intended to allow the continued use of residences in existing residential neighborhoods for a home based business related to a truck use. General features of the Residential Truck District include:

- Continued and expanded use and operation of a home based truck business
- Maintain the aesthetic integrity of the area through enhanced landscaping, screening, and fencing

## **13.2 Applicability**

### **A. Projects Subject to Development Regulations**

This Chapter contains the development regulations that govern all future private development actions in the RTD, including new construction, additions, or renovations to existing structures and/or new land uses proposed for existing facilities.

### **B. Right of Continued Use**

This Chapter shall not require any change in any existing building or structure for which a building permit has been previously issued, or for approved plans on file in the Community Development Department before the effective date of this Specific Plan. Changes in the property's ownership or tenants of legal existing uses shall likewise require no change in any existing building or structure. Nonconforming standards and provisions shall be governed by Section 13.10 Entitlement Procedures.

### **C. Other Requirements**

This Chapter does not eliminate the need for obtaining any other permits required by the City, or any permit, approval or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.

### **D. Types of Development Regulations**

The Development Regulations are of two types – Standards and Guidelines – as follows:

1. Standards address those aspects of development that are essential to achieve the goals of the Specific Plan. They include specifications for allowable land uses and site development (e.g., building height, setbacks, etc.). Conformance with Standards is mandatory. Standards are indicated by use of the words "shall," "must," or "is / is not permitted."
2. Guidelines provide guidance for new development in terms of aesthetics and design details. They are intended to direct building and site design in a way that results in the desired character for the RTD. Whereas conformance with the Standards is mandatory, conformance with the Guidelines is preferred and/or recommended. Provisions that fall into this category are indicated by the use of the words "should," "may" or "are encouraged to." In various cases, the Guidelines provide a choice of treatments that will achieve the desired effect. Developers are permitted to propose alternative design details if they are able to show that the details implement the Specific Plan objectives with respect to the desired character of the RTD.

**E. Minimum Requirements**

The provisions in this Chapter shall be minimum requirements. When this Chapter provides for discretionary authority on the part of the Director of Community Development, Planning Commission, or City Council, that discretion may be exercised to impose more stringent requirements if deemed necessary to accomplish the objectives of the RTD.

**F. Overview of Development Regulations**

1. Relationship of Land Use Districts. The development regulations in this Chapter apply to properties within the RTD. Exhibit 13-1 – Land Use Plan indicates the location of the RTD and its relationship to the other land use districts in the Specific Plan area.
2. Standard, Guidelines and Procedures. The development regulations are divided into the following sections: 13.3 Allowable Land Uses and Permit Requirements; 13.4 Development Regulations; 13.5 Landscape Regulations; 13.6 Parking Standards; 13.7 Sign Standards; 13.8 Design Guidelines; and 13.9 Entitlement Procedures. Projects must meet all development standards in order to achieve approval in the development review process. Projects are encouraged to adhere to the recommendations contained in 13.8 Design Guidelines.
3. Steps for Using Chapter. Table 13-1 – Process Procedures illustrates the steps for using this Chapter.

**Table 13-1 – Process Procedures**

| <i>Instructions</i>                                                                                                         | <i>Information Source</i>                 | <i>Where to Find in this Chapter</i> |
|-----------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|--------------------------------------|
| Locate property and its street frontage                                                                                     | Land Use Plan                             | Exhibit 13-1                         |
| Identify the allowable uses and refer to the definitions of the uses                                                        | Allowable Land Uses & Permit Requirements | Table 13-2                           |
|                                                                                                                             | Definitions                               | Appendix A                           |
| Comply with the requirements for density, lot dimensions, height limits, and setbacks                                       | Density and Dimensional Standards         | Table 13-3                           |

# Southwest Industrial Park Specific Plan

Residential Truck District

Exhibit 13-1 – Land Use Plan.

### **13.3 Allowable Land Uses and Permit Requirements**

This Section identifies allowable land uses and their permit requirements.

#### **A. Allowed Uses**

Table 13-2 – Allowable Land Uses and Permit Requirements identifies the types of land uses allowed in the RTD and the use permit required to establish each use.

#### **B. Uses Not Listed**

Uses not listed in Table 13-2 are prohibited land uses.

#### **C. Other Applicable Regulations**

The provisions contained in this SWIP Specific Plan constitute the primary land use and development standards for the Specific Plan area. These regulations are in addition to the provisions in the City of Fontana Municipal Code.

This Specific Plan provides all development standards and guidelines necessary to approve subsequent project applications, unless otherwise noted. Permit processing procedures (e.g., noticing, hearing, appeals, and expiration procedures) and enforcement procedures are provided in Municipal Code Chapter 30 (Zoning and Development Code) shall apply, unless otherwise noted. Where there is a conflict between the provisions in this Specific Plan and those in the Zoning and Development Code, the Specific Plan provisions shall prevail to the extent allowable under Federal or State law. Where there is no conflict, both shall be applied concurrently.

#### **D. Definitions**

Definitions for land uses are provided in Appendix A Definitions. If no definition is provided, the definitions in the Municipal Code shall apply. The Director of Community Development shall interpret the definitions; make a similar use determination in compliance with Subsection 13.9.D Entitlement Procedures- Similar Use Determination; and/or refer any questions to the Planning Commission for its determination.

| Temporary Uses                                            | Municipal Code Chapter 30, Division 14 (Temporary Use). |

Notes:

(1) See Section 13.6.D. Oversize Vehicle Parking.

### 13.4 Development Standards

New land uses and structures and alterations to existing land uses and structures in the RTD shall be designed, constructed, and established in compliance with the requirements in this Section.

#### A. Density and Dimensional Standards

Single-family residential uses shall comply with the standards in Table 13-3 – Density and Dimensional Standards. The Director of Community Development is authorized to approve modifications of 10 percent or less of any land use district setback, lot width, lot depth, building coverage, building height, or wall height standard in compliance with the administrative variance procedures in Municipal Code Section 30-51.6 (Findings necessary for granting a variance).

The Director of Community Development may grant an administrative variance from the requirements of this chapter where practical difficulties, unnecessary hardships, or results contrary to the intent of this chapter would occur from the strict and literal interpretation and enforcement of the Code. An administrative variance may be granted upon conditions which will ensure the protection of the public safety, health and welfare. To grant an administrative variance, the Director of Community Development must find from the facts presented that the following conditions exist.

- (1) That because of circumstances applicable to the property including size, shape, topography, location or surroundings, the strict application of this chapter will deprive the property of privileges enjoyed by other property in the vicinity and under identical zoning classification;
- (2) That the granting of such an administrative variance will be subject to conditions assuring that the variance shall not constitute a grant of special privileges inconsistent with the limitations upon other properties in the vicinity and zoning district in which the property is located;
- (3) That the administrative variance does not authorize a use or activity which is not a specifically allowed use in the zoning district in which the property is located; and
- (4) That the granting of one administrative variance will not be contrary to the general plan.

| Side                                                                                                                                                                                                                                        | 15 ft minimum                                                                                                                  |
| (1) Each dwelling unit shall provide a minimum one-half bath ("powder room"), consisting of at least a water closet (toilet) and sink, on the first or ground floor when the first or ground floor contains habitable living space.         |                                                                                                                                |
| (2) See Municipal Code Section 30-167 (Projections into Yards) for architectural features.                                                                                                                                                  |                                                                                                                                |
| (3) The habitable space of a building may encroach into the required front setback area in compliance with the Plotting and Design Criteria. Side-on garages may encroach into the required front setback area up to a maximum of six feet. |                                                                                                                                |
| (4) Secondary Highways (Citrus and Poplar) and Collector Streets (Catawba)                                                                                                                                                                  |                                                                                                                                |

### **B. Accessory Buildings, Structures, and Sheds**

Detached accessory buildings, structures and sheds, with the exception of pools, spas, and hot tubs regulated by Municipal Code Section 30-178, shall be subject to the following requirements:

1. Private garages and carports, attached.
  - a. On lots of less than one net acre, the total area is not to exceed 1,000 square feet or 25 percent of the living area of the principal residence, whichever is greater.
  - b. On lots of one net acre or larger but less than two acres, the area shall not exceed 1,500 square feet or 25 percent of the living area of the principal residence, whichever is greater.
  - c. On lots of two acres or larger but less than four net acres, the area shall not exceed 2,000 square feet or 25 percent of the living area of the principal residence, whichever is greater.
  - d. On lots of four acres or larger, the area shall not exceed 3,000 square feet or 25 percent of the living area of the principal residence, whichever is greater.

2. Detached garages and carports, storage buildings, workshops, hobby shops, recreation rooms, and other similar uses.
  - a. On lots of less than one net acres, the combined area of accessory structures shall not exceed 1,000 square feet or 25 percent of the living area of the principal residence, however, whichever is greater.
  - b. On lots of one net acre or larger but less than two net acres, the combined area of accessory structures shall not exceed 1,500 square feet or 25 percent of the living area of the principal residence, whichever is greater.
  - c. On lots of two net acres or larger but less than four acres, the combined area of accessory structures shall not exceed 2,000 square feet or 25 percent of the living area of the principal residence, whichever is greater.
  - d. On lots of four net acres or larger, the combined area of accessory structures shall not exceed 3,000 square feet or 25 percent of the living area of the principal residence, whichever is greater.
3. Accessory structures shall be architecturally compatible with or superior to the primary dwelling unit; metal and aluminum sided and roofed buildings are prohibited.
4. Setbacks.
  - a. The following setbacks shall be maintained:

| <b><i>Property Line</i></b> | <b><i>Required Setback</i></b> |
|-----------------------------|--------------------------------|
| Front                       | 25 ft                          |
| Side                        | 5 ft min, 15 ft aggregate      |
| Rear                        | 10 ft                          |

- b. Reverse corner lot. On reverse corner lots, accessory structures shall not extend beyond the required front setback of the abutting key lot and shall maintain a distance of five feet from the side lot line of the abutting key lot.
- c. Two-story structures. Two-story accessory structures are not permitted within any part of a required rear setback area. If additional rear yard area beyond the minimum required setback area is provided, a two-story structure may be placed within the additional area, provided the following setbacks are maintained:

| <b><i>Property Line</i></b> | <b><i>Required Setback</i></b> |
|-----------------------------|--------------------------------|
| Front                       | 60 ft                          |
| Side                        | 7 ft                           |
| Rear                        | 25 ft                          |

- d. Distance from alley centerline. Accessory structures shall be located a minimum distance of 15 feet from the centerline of an alley or recorded easement.

- e. Distance from primary structure. Accessory structures shall be located a minimum distance of six feet away from the primary structure. If the two structures are connected by a breezeway, the minimum separation distance shall also be six feet.

5. Sheds.

- a. Location. Sheds shall be permitted subject to the following:

- (1) The shed shall not exceed eight feet in height.
- (2) The size of the shed shall not exceed 120 square feet in floor area.
- (3) There shall be no more than one shed for each 7,200 square feet of lot area.
- (4) Architectural compatibility with the primary structure is encouraged; metal, aluminum, and vinyl sheds are allowed provided the regulations of this section are met.
- (5) The following setbacks shall be maintained:

| <i>Property Line</i> | <i>Required Setback</i> |
|----------------------|-------------------------|
| Side                 | 3 ft                    |
| Rear                 | 3 ft                    |

- b. Corner lot. On corner lots, sheds shall not be visible from the public right-of-way.

6. Temporary shade awnings and easy-ups. Temporary shade awnings and easy-ups are prohibited within the yard area between the front or side of a dwelling or garage and any public right-of-way.

**C. Additions to Existing Single-Family Structures**

1. Single-story additions. Single-story additions, including screened and/or enclosed patio structures, shall comply with the following:

- a. All RTD development standards.
- b. Side setbacks for additions shall be equal to or greater than the existing side setback of the existing structure.
- c. The architecture of the proposed addition shall be compatible in design with the existing structure. The roofing shall be of the same style and material as the existing structure, with the exception of open and enclosed patio covers.

2. Two-story additions. Second-story additions shall comply with the following:

- a. All RTD development standards.

- b. Side setbacks for additions shall be equal to or greater than the existing side setback of the existing structure.
- c. The architecture of the proposed addition shall be compatible in design with the existing structure. The roofing shall be of the same style and material as the existing structure, with the exception of open and enclosed patio covers.
- d. Window locations to ensure privacy.
  - i. Windows shall be situated so that they are not directly opposite those windows of adjacent residential dwelling units.
  - ii. Window locations shall take into account adjacent properties, recreation areas, and amenities (pools, spas, etc.).
  - iii. Where conflicts between proposed window locations occur, visual intrusion mitigation measure(s) shall be provided (e.g., high windows, wing walls, view-obscuring window treatment, window alignment, etc.).

**D. Fences and Walls**

- 1. Standards. Table 13-4 Standards for Fences, Walls, and Screening contains standards for fences, walls, and screening.

| <b>Table 13-4 – Fence, Walls, and Screening Standards</b>                                                           |                                                         |                                                                                                           |
|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| <i>Location</i>                                                                                                     | <i>Materials<br/>See Section 13.8 Design Guidelines</i> | <i>Maximum Height (1)</i>                                                                                 |
| Within front setback area                                                                                           | Solid fencing/wall                                      | 36 inches                                                                                                 |
|                                                                                                                     | Open fencing/wall                                       | 5 ft                                                                                                      |
| Within street-side setback area                                                                                     | Solid or open fencing/wall                              | 6 ft                                                                                                      |
| Within interior side setback area                                                                                   | Solid or open fencing/wall                              | 6 ft; or<br>8 ft if abutting properties differ in elevation or are commercial or industrial types of uses |
| Within rear setback area                                                                                            | Solid or open fencing/wall                              | 6 ft; or<br>8 ft if abutting properties differ in elevation or are commercial or industrial types of uses |
| Outside of a required setback area                                                                                  | Solid or open fencing/wall                              | 6 ft                                                                                                      |
| At intersections of alleys, streets, and driveways within rear setback area                                         | Solid or open fencing/wall                              | 30 inches                                                                                                 |
| Note: (1) All fences and walls shall meet the City's line of sight regulations, as determined by the City Engineer. |                                                         |                                                                                                           |

2. **Materials.**
  - a. Open fencing shall mean fencing with over 50 percent of the surface area open for free passage of light and air and through which the area behind the fence is visible to public view. See Exhibit 13-2 Open and Solid Fencing.
  - b. Solid fencing shall mean fencing with 50 percent or less of the surface area open for free passage of light and air and designed to conceal the area behind the fence from public view. See Exhibit 13-2 Open and Solid Fencing.
  - c. Barbed wire fences, electric fences, or similar fencing material is prohibited.
  - d. Chain link fencing is allowed on interior property lines that are not visible from public rights-of-way.
3. Screening and buffering. Roof-mounted and ground-mounted mechanical equipment, utilities, storage, and solid waste storage areas shall be screened from adjoining properties and public right-of-ways by a visual barrier (e.g., wall, fence, landscape material, etc.) to the satisfaction of the Director of Community Development. Where only landscaping is used for screening, it shall be planted with five-gallon (minimum size) shrubs spaced to provide a continuous dense screen.

***E. Outdoor Activities and Storage***

Material or equipment shall not be stored anywhere in the front yard area except for temporary storage during construction on the same site. Boats, campers, motor vehicles, trailers, equipment, materials, or antenna that are stored in required side or rear setback areas shall comply with Table 13-3 Density and Dimensional Standards.

### 13.5 Landscape Standards

#### A. Required landscaping

This section provides the required minimum standards for all landscaped areas within any new and rehabilitated private development project.

1. Landscaped area means the entire parcel less the building footprint, driveways, nonirrigated portions of parking lots, and hardscapes (e.g., driveways, approaches, sidewalks, etc.). Decorative hardscapes used to enhance the landscape will be considered as part of the landscape area; this would include cobble rock, decomposed granite, brickwork, stamped concrete, gravel, pavers, and water features.
2. Landscape setbacks along public rights-of-way shall incorporate landscape buffers with undulating and variable height earth-mounding (berms), and/or low walls, and required plant materials as shown in Table 13-5 Landscape Standards.
3. Block wall and wrought iron fencing shall be located 10 feet behind the ultimate right-of-way.
4. The developer shall submit to the City's Department of Engineering, a Landscape Documentation Package that conforms to the Water Efficient Landscape Ordinance in Municipal Code, Chapter 28 Vegetation.
5. All new development landscaping shall comply with the standards shown in Table 13-5 Landscape Standards. Additional guidelines that should be considered are provided in Section 13.9 Design Guidelines.

**Table 13-5 – Landscape Standards**

*Note: The Director of Community Development may require additional setbacks.*

|                                                                                                           |                                                                                                                                                                                                  |
|-----------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Front Yard Landscaping<br>Mixture of turf (natural and synthetic), shrubs, trees, and decorative features | Minimum 50% of total front yard area shall be landscaped.<br>Other 50% may be covered by non-decorative hardscape features (e.g. concrete, asphalt, gravel, driveways, sidewalks, porches, etc.) |
| Decorative features<br>Brick, stone, art, fountains, ponds, etc.                                          | Up to 25 % of the total 50 % landscaping of front yard area                                                                                                                                      |
| Minimum plant sizes and quantities                                                                        |                                                                                                                                                                                                  |
| Trees                                                                                                     | Two fifteen-gallon trees – One street tree and one front yard tree<br>Corner lots – Additional trees for each 30 linear feet of side yard.                                                       |
| Shrubs                                                                                                    | One shrub for each 9 sq ft of landscape area<br>50% - 5 gallon<br>50% - 1 gallon                                                                                                                 |
| Groundcover                                                                                               | 12-inch maximum on center spacing that will cover area within one year of initial planting                                                                                                       |

### 13.6 Parking Standards

#### A. Applicability

This section contains regulations for off-street parking and loading. Regulations identify required number of parking and loading spaces for all new development projects and those proposing substantial modification to existing buildings. Please refer to Municipal Code Chapter 30 Zoning and Development Code for all parking and loading-related information or regulations not specifically addressed in this section.

#### B. General Parking and Loading Regulations

Required off-street parking spaces shall be located on the same property as the use that they are intended to serve.

#### C. Required Number of Parking Spaces

Each land use shall provide the number of off-street parking spaces indicated in Table 13-6 Parking Requirements by Land Use.

| Table 13-6 – Parking Requirements by Land Use             |                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Land Use</i>                                           | <i>Motor Vehicle Spaces (minimum #)</i>                                                                                                                                                                                                               |
| <b>Entertainment, Recreation and Public Assembly Uses</b> |                                                                                                                                                                                                                                                       |
| Open Space/Park                                           | Public - Determined by Parks and Recreation Department<br>Private - 1 space for each 4,000 sq ft of total park area<br>Bicycles -- 1 space per 33 vehicle parking spaces                                                                              |
| <b>Residential Uses</b>                                   |                                                                                                                                                                                                                                                       |
| Second Dwelling Units                                     | 2-car enclosed garage.                                                                                                                                                                                                                                |
| Single Family Dwellings                                   | 2 enclosed spaces / 1 to 4 bdrms;<br>3 enclosed spaces / 5 to 6 bdrms; and<br>1 additional enclosed space for every 1 bdrm over 6 bdrms<br>Tandem spaces allowed only for 3 <sup>rd</sup> and 4 <sup>th</sup> spaces<br>1 truck space (12 ft x 70 ft) |

#### D. Oversize Vehicle Parking

Oversize vehicles, including recreational vehicles, commercial trucks exceeding a manufacturer's gross vehicle weight rating of 10,000 pounds, and tractor trailer trucks, may be parked on a residential property subject to the following standards:

1. A maximum of one oversize vehicle may be parked on any lot at a time, provided that the lot is a minimum one acre in size.
2. The owner or operator of the vehicle shall be a resident of the home on the parcel where parked.

3. Parking and storage shall be within the rear yard area. All parts of a vehicle shall be at least five feet away from each interior lot line; and at least 70 feet from a structure used for human habitation or public assembly (e.g., parks, churches, etc.) on adjoining properties. The area of human habitation shall not include cabanas, patios, attached or detached private garages or storage structures.
4. Vehicles shall be screened from public view with a six-foot high solid or open fence or wall.
5. Vehicles shall not be left to idle with engines or refrigeration units running between the hours of 8:00 pm and 7:00 am, unless the noise level of the operation is reduced to 45 dB(A) or less as measured at the lot line. At other times, the operator of the vehicle shall not idle the vehicle's engine for longer than 10 minutes.
6. The dispensing of fuel on-site in excess of 10 gallons is prohibited.
7. The property owner shall provide appropriate design measures to minimize dust.
8. Outdoor storage of equipment, materials, or supplies shall not be allowed.
9. Mechanical work and routine maintenance or repair work that causes an excessive amount of noise shall be conducted off-site. The following maintenance work shall not be conducted on-site:
  - a. Steam-cleaning or degreasing the vehicle.
  - b. Welding.
  - c. Use of pneumatic equipment, other than to repair a disabled vehicle.

### **13.7 Sign Standards**

Signs shall be prohibited in the RTD.

### **13.8 Design Guidelines**

#### **A. Design Objectives**

The Design Guidelines will promote and reinforce the City's commitment to high quality development. In general, the guidelines are intended to ensure that development preserves or improves the positive characteristics of the City's image. The objectives of these guidelines are to:

- Promote orderly development by implementing the SWIP Specific Plan objectives, policies, and principles found in Chapter 2 Policy Framework.
- Protect and enhance property values by ensuring that development fits properly within the context of its surroundings and does not negatively impact adjacent uses.
- Encourage individual creativity and innovative solutions by allowing flexibility in how a particular guideline is met as long as the intent of the guideline is achieved.
- Ensure functional pedestrian and motor vehicle circulation within a project and convenient pedestrian linkages to and from adjacent residential, commercial, industrial, and school areas.

#### **B. Design Intent**

The RTD encourages high-quality residential architecture that enhances neighborhood character. Scale, building articulation, and site layout are important contributions to the neighborhood character. The following section provides guidance to develop well-designed homes that can accommodate existing businesses.

#### **C. Residential Uses**

##### **General Architecture and Site Design**

- Single family homes shall reflect the mass and scale of the surrounding neighborhood.
- Residential architecture shall be consistent with the existing residential architecture in the area.
- Buildings shall be oriented to provide some privacy, yet still relate to the street and the surrounding community. Doors should be visible from the street and windows should allow residents to have "eyes on the street" for natural surveillance.

- Two-story residences are encouraged to have a single-story element to provide transition to the two-story massing. Two story masses should be located towards the center of buildings with building height and massing stepping down at the edges to avoid the appearance of large, two-story “boxes”.
- Avoid creating a two-story structure that may directly overlook into neighboring properties. Privacy of adjacent uses shall be considered in the scale and massing of structures.
- Living spaces shall be the primary visual emphasis for the dwelling and garages shall be de-emphasized. Garages shall be setback from the main house façade whenever possible.
- Building details shall be in proportion to the overall building massing.
- Building additions or remodeled areas should employ details, materials and colors that are consistent with the original building. Additions should not appear “tacked on.”

### **Roofs**

- Roofs should be simple in form as to not preclude building additions at a later date.
- Roof form, materials and colors should be consistent with the architectural style of the house. **See Figure 1.**
- Skylights with exposed metal shall be anodized or factory finished to match surrounding roof materials.
- Skylights are encouraged to meet the following guidelines:

Figure 1. Mission tile consistent with Spanish style house.

- Glass shall be clear, flat and non-reflective. Skylights shall be mounted on the same plane and angle as the associated roof.
- Domed and/or bubble skylights are not appropriate.
- Skylights shall be located to minimize visibility from off-site.

**See Figure 2.**

Inappropriate:  
Domed Skylight

Appropriate:  
Flat Skylight

Figure 2. Skylights.

### Front Elevation

- Front elevations shall be well-articulated and detailed to relate to the surrounding neighborhood.
- Emphasis shall be placed on the front entry to create a welcoming appearance for the dwelling. Entries should incorporate features such as porches or large recessed entry alcoves. **See Figure 3.**
- Create visually interest by popping out or recessing portions of the front façade.
- Second story balconies may be used to add interest and provide outdoor living space along the front elevation. **See Figure 4.**
- Enhanced window treatments shall be provided on all elevations. Treatments may include:
  - Recessing window by a minimum of 4 inches,
  - Providing window surrounds at least 4 inches in width and 2 inches in depth,
  - Providing shutters sized as if to cover the window if closed, and
  - Integration of windows into popouts with columns or overhangs, as consistent with the architectural style of the house.

**See Figure 5.**

Figure 3. Porch creates a welcoming entry.

Figure 4. Second story balcony.

Figure 5. Enhanced window treatment.

- Create interesting rooflines through off-set roof planes, eave heights, ridge lines, and/or dormers. **See Figure 6.**

#### Side and Rear Elevations

- The window style, and window treatment and surrounds on visible side and/or rear elevations shall be consistent with the same elements on the front elevation.
- The design of the roof and roof elements on the visible side and/or rear elevations shall incorporate features or be consistent with the same element features contained on the front elevation, but not necessarily to the same level of detail (i.e. fewer roof plane changes).

Figure 6. Dormer windows.

#### Garages, Parking and Accessory Structures

- If provided, porte-cocheres shall be architecturally integrated to the main house, with details that mirror the level of ornamentation found on the main house. **See Figure 7.**
- If provided, porte-cocheres shall be located on the driveways that lead to the garage.
- Oversize vehicle parking shall be screened from view from the public street. Screening may be achieved through decorative walls, landscaping of six feet in height, and/or placement behind buildings. **See Figure 8.**
- Accessory structures such as detached garages, storage/work buildings and trellis/canopies shall be permanently anchored to a foundation and utilize materials that are permanent in nature.
- Accessory structures shall be architecturally consistent with the main building and utilize similar detailing, materials, and colors.

Figure 7. Porte-cochere.

Figure 8. Appropriate oversized vehicle parking.

- Provide well-detailed garage doors consistent with the architecture of the dwelling to reduce the overall visual mass of the garage.

### Colors and Materials

- Building materials should be durable, low-maintenance, and able to withstand long-term exposure to elements.
- Exterior materials, textures and colors shall complement the architectural style of the house.
- Limit the number of building materials used on a façade. As a general rule, use no more than two different materials (excluding glass windows) on a single façade. Frequent changes in materials should be avoided. **See Figure 9.**
- Changes in material should generally occur when there is a change in the plane of the façade. If possible, the change in material shall occur on inside corners of the building. If a change is proposed along the line of a single plane, a pronounced expansion joint or trim piece shall be used to define a clear separation. Stone shall turn corners and not be used only on one wall of a façade.
- Inappropriate building materials that are discouraged on facades include:
  - o Plywood
  - o Hardboard
  - o Unfinished lumber
  - o Aluminum siding
  - o Textured T1-11 siding
  - o Plastics/Plastic Laminates
  - o Rolled roofing/rock
  - o Highly reflective materials
  - o Unfinished metal, aluminum or similar material

Figure 9. Number of materials limited to two plus glass.

- Metal buildings shall be prohibited.
- Colors and materials should be durable and not readily deteriorate with exposure to the elements.
- Colors should be complementary to one another and appropriate for the chosen architectural style of the building. **See Figure 10.**
- Avoid highly contrasting materials.
- Colors shall be non-reflective.
- Color applications on a façade should generally be limited to one or two main colors and two to three accent colors that complement the main color(s) of the house.
- Painted building surfaces shall have a matte finish. Trim work may have a glossy finish.

Figure 10. Colors complement building architecture.

### Equipment

- Mechanical equipment such as air-conditioning units, utility meters, pool/spa equipment and similar above-ground devices shall be screened from off-site views by the use of architectural devices and/or plant materials. Where feasible, these areas are to be integrated into the building's architecture. Noise emission from such devices is to be contained. **See Figure 11.**
- Service, trash, and storage areas are to be completely enclosed as part of the building's architecture. All exposed metal related to utilities (meters, outlet covers, etc.) is to be painted to match adjacent natural and/or building materials.

Figure 11. Avoid mechanical equipment that is not screened from off-site views.

### Balconies and Porches

- Porch elements such as columns should provide enough mass and scale to appear they are supporting roof elements of a porch. Avoid columns that appear thin or weak in appearance. **See Figure 12.**
- Balconies and projections should proportionately complement each other and integrate into the overall architectural massing of the home. Balconies should be roofed when they exceed four feet in depth.
- Balconies shall not be placed where they can overlook private spaces of adjacent homes, without adequate privacy screening.

Inappropriate: Columns that appear thin in proportion to the porch

Figure 12. Porch Columns.

### Landscaping

- Utilize landscaping as an integral component to overall project design.
- Landscape designs emphasizing water-efficient plants are encouraged. **See Figure 13.**

Figure 13. Example of drought-tolerant planting.

### Walls and Fences

- The design of fences and walls, as well as the materials used, shall be consistent with the overall house design.

### Lighting

- Exterior light sources shall be placed, shielded and/or directed away from neighboring properties and streets.
- Lighting fixtures and their structural support shall be the same scale and design of the chosen architectural style. **See Figure 14.**

Figure 14. Light fixture matches architectural style.

- Consideration of the latest technical and operational energy conservation concepts in lighting designs are highly encouraged.
- The preservation of the nighttime is highly encouraged. Exterior night lighting shall be kept to an absolute minimum as necessary for safety and address identification at entrances, driveways and buildings. All light fixtures shall be activated for short-term use only.

### **13.9 Entitlement Procedures**

#### **A. Purpose**

These administrative procedures have two major purposes:

1. Ensure that development conforms to the SWIP Specific Plan ("Plan").
2. Ensure that the City's review is as expedited as possible while remaining legal and proper.

#### **B. Summary of Processing Procedures**

1. Conformity with the Plan. The Director of Community Development shall review each application for conformity with the development regulations in this Chapter. Conformity has two components:
  - a. Standards. Compliance with the Standards is mandatory and the City may not approve a project that fails to comply with the Standards.
  - b. Guidelines. The City may exercise discretion in evaluating the project's compliance with the Guidelines.
2. Project Review. Applications for development approvals shall be filed with the Department and may be returned for revision. Applicants must meet all items identified as "Standards". Applications must strive to meet the "Guidelines," but applicants may propose alternate ways to achieve the goals of the Guidelines.
3. Timing of Permits and Approvals. Required planning approvals shall be obtained before the issuance of any grading, building, or other construction permit, and before the proposed use is constructed, otherwise established, or put into operation.
4. Processing Requirements. Applications for planning permits shall be processed in compliance with Table 6-12 – Hearing Bodies.
5. Timing of Project Review. Project review shall be required before the issuance of a Building or Grading Permit, Business License, or Certificate of Occupancy for any new structure (not including fences or walls) and/or existing structures to be reconstructed or remodeled (including facade improvements).

**Notes:**

Decisions of any "Reviewing Body" may be appealed to the City Council, except where State law limits such appeal to the City Engineer. If the Planning Commission is listed above as the "Appeal Body", the Commission must first review an Appeal before it may be forwarded to the City Council for consideration.

DAB—Development Advisory Board

CD—Community Development Director

PC—Planning Commission

CC—City Council

PR—Parks and Recreation Commission

X\*—At the discretion of the Director of Community Development or his/her designee

X\*\*—If Public Park(s) are considered

X\*\*\*—City Engineer has final approval

f—Recommending body to the City Council

**C. Administration and Enforcement.**

The Director of Community Development shall enforce the provisions in this Specific Plan. All officers, employees, and officials of the City of Fontana, who are vested with the duty or authority to issue permits or licenses shall conform with this Specific Plan and shall not issue any permit or license, or approve any use or building, which would be in conflict with this Specific Plan. Any permit, license or approval issued that is in conflict with the requirements of this Specific Plan shall be considered null and void.

**D. Amendments to the Specific Plan.**

The SWIP Specific Plan may be amended utilizing the same procedures by which it was originally adopted. In addition, subsequent amendments to this Specific Plan shall demonstrate the amendment meets the intent of the Specific Plan's existing policy framework, or specific findings to demonstrate the amendment enhances the Plan or is necessary to more effectively implement the Specific Plan. All sections or portions of the Specific Plan proposed to be amended or that may be affected by the amendment must be identified during the amendment process. A concurrent amendment to the General Plan would not be required provided that the Director of Community Development determines that substantive changes would not influence the goals, objectives, policies, or programs of the General Plan.

Allowing flexibility in the administration of the Specific Plan enhances the effectiveness of the Specific Plan as a comprehensive, "living" planning document. The following minor modifications to the Specific Plan qualify for processing as an administrative amendment to the Specific Plan subject to the review and approval of the Director of Community Development:

- Changes in the location of infrastructure and public facilities (e.g., internal roads, drainage facilities, etc.).
- Minor change in roadway alignment.
- Adjustment of planning area boundaries provided the total acreage of the affected planning area does not increase or decrease by more than 20 percent of the total stated in the approved Specific Plan.
- Minor changes to the Design Guidelines, which are intended to be flexible in nature.
- Minor deviations (less than 10 percent) from the development standards in this Chapter.
- Other minor modifications similar to those listed above and deemed minor by the Director of Community Development, which are in keeping with the intent of the SWIP Specific Plan.

**E. Similar Use Determination**

1. Applicability and Authority. Unlisted uses in Table 6-2 are prohibited uses, unless the Director of Community Development finds a proposed use to be similar to an expressly allowed use in compliance with this Section. A Similar Use Determination is a process for determining when an unlisted use is similar in nature to a permitted or conditionally permitted use and may be permitted. As specified by Municipal Code Section 30-4 Other Uses to be determined by the Director of Community Development, the Director of Community Development shall have the responsibility and authority to make Similar Use Determinations.
2. Ministerial Action. A Similar Use Determination shall constitute a ministerial action.
3. Application Contents and Filing. An application for similar use shall be in writing on forms provided by the Director of Community Development.
4. Determination Findings. In determining “similarity,” the Director of Community Development shall make all of the following findings:
  - a. The characteristics of and activities associated with the proposed use are equivalent to one or more of the listed uses and will not involve a higher level of activity or environmental impacts than the uses listed in the land use district;
  - b. The proposed use will be consistent with the purposes of the applicable land use district; and
  - c. The proposed use will be consistent with the General Plan and this SWIP Specific Plan.
5. Notice. A Similar Use Determination shall be made in writing and shall contain the facts that support the determination. The Community Development Department shall maintain all determinations on record for review by the general public upon request. The notice shall include:
  - a. A brief statement explaining the criteria and standards considered relevant to the decision;
  - b. A statement of the standards and facts relied upon in rendering the decision; and
  - c. An explanation of appeal rights and appeal deadlines. The determination of similar use by the Director of Community Development shall be subject to appeal to the Planning Commission.

***F. Dedication and Maintenance of Gateway Intersection Enhancements***

1. When dedication and maintenance is required.
  - a. Whenever a development project is proposed on land that is designated as a location for gateway intersection enhancements in Section 6.8.B Public Right-of-Way Streetscape- Gateways, the developer shall:
    - i. Dedicate any necessary right-of-way area to the City or provide an easement in favor of the City for the installation of gateway intersection enhancements;
    - ii. Construct the gateway intersection enhancements to the standards indicated in Section 6.8., Public Right-of-Way Streetscape; and
    - iii. Enter into an agreement with the City that specifies perpetual maintenance.
  - b. The applicable review authority shall impose the dedication (or easement) requirement as a condition of project approval.
  - c. The City Attorney and the Director of Community Development shall approve the form and content of any dedication or easement instrument used to ensure the installation and perpetual maintenance of the gateway intersection enhancements.

***G. Nonconforming Lots, Structures and Uses***

1. Nonconformance provisions are established to:
  - a. Bring all uses, structures, sites and signs into conformance with the developmental requirements and design guidelines in this Specific Plan;
  - b. Limit the occurrences and extent of nonconformance by prohibiting expansion, intensification, reinstatement, alteration, restoration after destruction, and reestablishment after abandonment; and
  - c. Gradually phase out nonconforming uses, structures, lots and signs.
2. Applicability
  - a. Nonconforming uses, structures, signs and lots may be maintained, expanded, altered and/or abated only in accordance with the provisions of this Specific Plan.

- b. Any Designated Historic Landmark, or any property listed on the California Register of Historical Resources or National Register of Historic Places, shall be exempt from the provisions of this Section with respect to the restoration and maintenance of structures, provided that any construction plans are approved through a Certificate of Appropriateness by the Historic Preservation Commission/Planning Commission.
- 3. Nonconforming Uses. A use that lawfully occupied a building or land at the time this Specific Plan became effective, and that does not conform to the use regulations of the land use district in which it is located, is deemed a "legal nonconforming use." A legal nonconforming use may continue, subject to the following:
  - a. Discontinuation of Use
    - i. Loss of legal nonconforming status. If a legal nonconforming use is discontinued for a period of 90 or more days, regardless of the owner's intent, it shall lose its legal nonconforming status and the continued use of the property shall be required to conform to all provisions of this Specific Plan.
    - ii. Extension of legal nonconforming status. Wherein special circumstances exist, the Director of Community Development may extend the legal nonconforming status of a use, for up to an additional 90-day period. Furthermore, an additional extension may be granted by the Planning Commission, for up to an additional 90-day period. The total time period of all time extensions shall not exceed 180 days.
    - iii. Extension of legal nonconforming use.
      - (1) An application for a Minor Use Permit shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Community Development Department to process the application. The application shall be filed prior to the expiration of the 90-day period.
      - (2) The application shall be reviewed by the Director of Community Development within 30 days following application filing. The Director of Community Development shall notify the applicant, in writing, as to whether the application is complete. If the application is not complete, the Director of Community Development shall specify those parts of the application that are not complete and shall identify the manner by which it can be made complete. If written notification is not provided to the applicant within 30 days following application filing, the application shall be deemed complete.

- (3) The Director of Community Development shall investigate the facts bearing on the application and provide the information necessary for action on the application, consistent with this Specific Plan and the General Plan. The applicant shall have made a good faith effort through the submittal of documentation and has diligently pursued compliance with this Specific Plan.
- (4) The application shall be reviewed by the Director of Community Development at a duly noticed public hearing, whom shall then approve, modify or deny the application. The decision of the Director of Community Development shall be final and conclusive in the absence of a timely filed appeal to the Planning Commission. An appeal of the Director of Community Development's decision shall be filed within 10 days from the date of the decision. An appeal of the Director of Community Development's decision shall be reviewed by the Planning Commission. The decision of the Planning Commission shall be final and conclusive in the absence of a timely filed appeal to the City Council.
- (5) The applicant may appeal the decision of the Planning Commission to the final deciding body, the City Council. The City Council decision shall be final and conclusive. If the application to extend the legal nonconforming use is approved by the City Council, the extension shall be granted for 90 days from the date of approval.
- (6) If the Director of Community Development or appointed designee has determined that the applicant has failed to show a good faith effort towards continually processing the extension of legal nonconforming use application (i.e., revising plans, withdrawing the application, placing the project on hold, etc.), the legal nonconforming use shall cease within 60 days from the application submittal date.
- (7) In granting an extension of the legal nonconforming status, the Director of Community Development may attach reasonable conditions and restrictions to the request, in addition to those required by this Specific Plan, which will ensure that the use:
  - Will not endanger the public health, safety or general welfare;
  - Will not injure the value of adjoining or abutting property;
  - Will not result in any significant environmental impacts; and
  - Will be in harmony with the area in which it is located.
- (8) In approving an extension of the legal nonconforming status, the Director of Community Development or Planning Commission shall consider and clearly establish the following findings of fact:

- The non-conforming use has been discontinued within the 90-day period.
    - A physical and/or economic hardship has prevented the nonconforming use from being in compliance prior to the expiration of the 90-day period;
    - Approving the extension will not adversely affect the health, safety or general welfare.
  - b. Change in Ownership, Tenancy or Management. A change in ownership, tenancy, or management of a nonconforming use shall not affect its legal nonconforming status, provided that the use did not discontinue pursuant to Section 3.ai entitled " Loss of legal nonconforming status," or the type of use and/or intensity of use does not change.
  - c. New Development. New development on any lot or parcel upon which a legal non conforming use exists shall require that all uses on the property conform to the provisions of this Specific Plan.
  - d. Alterations and Expansion of Use
    - i. A nonconforming use shall not be enlarged or extended in such a way as to occupy any part of any structure or property that it did not occupy prior to the creation of the nonconformity.
    - ii. A structure fully or partially occupied by any nonconforming use shall not be moved, altered or enlarged, unless required by law, or unless the moving, alteration or enlargement will result in the elimination of the nonconforming use.
  - e. Intensification of Use. A nonconforming use shall not be intensified in such a way as to increase the discrepancy between existing conditions and the standards set forth in this Specific Plan.
4. Nonconforming Structures. A structure lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of the land use district in which it is located, including setbacks, separations, height and design, is deemed a "legal nonconforming structure." A legal nonconforming structure may continue to exist, subject to the following:
- a. Damage or Destruction
    - i. A legal nonconforming structure that is damaged or partially destroyed by fire, flood, wind, earthquake or other calamity, or the public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented by reasonable care and maintenance of the structure, may be reconstructed up to the original size, placement and

density, provided that total cost of such reconstruction does not exceed more than 50 percent of the structure's current fair market value. The structure may be restored and the nonconforming use may be resumed, provided that restoration is started within 6 months, unless extended by the Director of Community Development, and diligently pursued.

ii. In the event that the cost of repairing such damage exceeds 50 percent of the current fair market value of the structure prior to such damage occurring, the structure may be reconstructed up to the original size, placement and density, subject to all of the following:

- The Planning Commission, at a duly noticed public hearing, must find that continuing the nonconforming structure will not result in an annoyance to and/or reduction of any surrounding property; and
- The extent of damage or partial destruction shall be based upon a comparison of the estimated cost of restoring the structure to its condition prior to such damage or partial destruction with its value at the time the structure was damaged or partially destroyed. Estimates for such purpose shall be made by or reviewed by the Building Official; and
- The restoration is commenced within six months and diligently pursued to completion;
- An application for a Nonconforming Structure shall be filed with the Community Development Department on a City application form, together with all required fees, plans, maps, reports, special studies, exhibits, and any other information deemed necessary by the Planning Division to process the application. The application shall be filed prior to the expiration of the 90-day period.
- A structure or development that has been damaged or destroyed by fire, flood, wind, earthquake, or other calamity, or by public enemy, or other cause which is beyond the control of the property owner, and which could not otherwise have been prevented may be reconstructed up to the original size, placement and density, except a multiple family dwelling or development which has been abandoned for a period of 90 or more days prior to being involuntarily damaged or destroyed, or a multiple family dwelling or development constituting a public nuisance prior to being involuntarily damaged or destroyed may not be reconstructed unless the structure is made to comply to all provisions of this Specific Plan.

b. Alterations and Expansion

i. A nonconforming structure shall not be moved, altered or enlarged so as to increase the discrepancy between existing conditions and the most current standard as prescribed by the land use district in which the structure is located, except alteration and/or enlargement to a single family dwelling

conducted pursuant to section (e) "Nonconforming Single-Family Residential Structures".

- ii. Within land use districts, reasonable repairs and alterations may be made to legal nonconforming structures, provided that no structural alterations shall be made which would prolong the life of supporting members of a structure, such as bearing walls, columns, beams or girders. Structural elements may be modified only if such modification or repair is immediately necessary to protect the public health and safety, occupants of the legal nonconforming structure, or adjacent property, as determined by the Building Official. The total cost of such repairs or alterations may not exceed 50 percent of the replacement cost of the nonconforming structure.
- c. New Structures. Any new structure constructed on a lot or parcel with an existing legal nonconforming structure shall be constructed in conformance with all applicable provisions of this Specific Plan. However, in no case may a new nonresidential structure be constructed on the same lot as an existing legal nonconforming residential structure.
- d. Abatement of Nonconforming Structures Posing a Threat to the Public Health, Safety, and General Welfare. A structure which is nonconforming because of a violation or deficiency that poses a threat to the public health, safety or general welfare, as determined by the Building Official, and which fails to resolve, repair or improve such, or to fully mitigate the hazard involved, shall be abated, condemned or demolished upon the issuance by the City of a nuisance abatement, condemnations, or demolition order.
- e. Nonconforming Single-Family Residential Structures. In addition to the requirements of subsections a and d above, a nonconforming single family residential lot and/or structure that was lawfully established and maintained before the adoption of this Specific Plan, but which under the provisions of this Specific Plan does not conform with the regulations of the land use district in which it is located with respect to use, design and/or development standards, and which is continuously used and maintained for single family residential purposes, shall be subject to the following:
- f. Alterations and expansions to structures within nonresidential zones.
  - i. Necessary repairs and desirable alterations, as deemed appropriate by the Director of Community Development, may be made to a legal nonconforming single family residential structure that is nonconforming as to use.
  - ii. A single family dwelling that is nonconforming as to its location within a land use district that does not permit single family dwellings, and in which the residential use was lawfully established and continuously maintained, shall be subject to the development regulations of the Municipal Code Chapter 30

Zoning and Development Code that pertain to the R1 zoning district and off-street parking and loading regulations..

5. Nonconforming Signs. A sign lawfully existing at the time this Specific Plan became effective, any portion of which does not comply with the requirements of Section 6.7 Sign Standards, is deemed a "legal nonconforming sign." A sign that presents a hazard to public safety, as determined by the City, shall be removed upon the issuance of a notice by the City. A legal nonconforming sign may continue to exist, subject to the following:
  - a. A nonconforming sign may not be altered, enlarged, extended, or moved, except in conformity with the requirements of Section 6.7 Sign Standards, or as otherwise required by law;
  - b. Where a use or a structure associated with a nonconforming sign is abandoned or discontinued, any sign associated with a new use of the site shall be in full conformity with the requirements of Section 6.7 Sign Standards.
6. Nonconforming to Development Standards. The development that is not in compliance with the site development standards prescribed by the regulations of the zoning district in which the lot or parcel is located, including area, coverage, configuration, dimensions, parking, landscaping, screen walls, fences and enclosure trash receptacles, is deemed "legal nonconforming," provided such development was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A development that is nonconforming as to landscaping, screen walls, fences and enclosure of trash receptacles, shall be altered to comply with the district regulations covering the following standards, or as a condition of any subsequent Development Plan or Conditional Use Permit approval.
7. Nonconforming Lots. A lot or parcel that is not in compliance with the site development standards prescribed by the regulations of the land use district in which the lot or parcel is located, including area and configuration is deemed a "legal nonconforming lot," provided such lot or parcel was lawfully created and existing at the time this Specific Plan, which created the nonconformity, became effective.
  - a. A lot or parcel that is nonconforming as to minimum area or dimension shall be granted all development rights and uses of the land use district within which it is located.
    - i. The landscaping of setback areas insofar as a setback exists;
    - ii. The landscaping of parking areas, provided fulfilling the requirement does not reduce off-street parking or loading spaces to fewer than prescribed in this Specific Plan;

- iii. The screening of storage areas; and
  - iv. The enclosure of trash receptacles.
- 8. Elimination of Nonconforming Adult Business Uses. Nonconforming adult business uses shall be eliminated in compliance with Municipal Code Chapter 30 Zoning and Development Code.
- 9. Abatement of Nonconforming Uses, Structures, Lots and Signs. Whenever a use, structure, site or sign becomes nonconforming because of a change of land use district boundaries or a change of the regulations prescribed for the district in which the site is located, the period of time prescribed in this Specific Plan for the abatement period for the elimination of the use, the removal of the structure or sign, or the improvement of the lot or parcel shall begin on the effective date of the change of district boundaries or regulations.

This page intentionally left blank.

#### ***14.1 Purpose***

The purpose of the Public Facilities (Kaiser High School) District is to accommodate the existing Kaiser High School Facility within the SWIP Specific Plan area.

#### ***14.2 Applicability***

1. This Section does not eliminate the need for obtaining permits required by the City, or any permit, approval, or entitlement required by any other applicable special district or agency, and/or the regulations of any State or Federal agency.
2. Exhibit 14-1 (Land Use Plan) indicates the location of the Public Facilities District and its relationship to the other land use districts in the Specific Plan area.

#### ***14.3 Allowed Land Uses***

The only allowed land use is Kaiser High School.

Exhibit 14-1 – Land Use Plan

## Appendix A – Definitions

*Definitions*

This page intentionally left blank

This Appendix provides definitions of terms and phrases used in this Specific Plan that are technical or specialized or that may not reflect common usage. If any of the definitions in this Appendix conflict with definitions in other provisions of the Municipal Code, these definitions shall control for the purposes of administering this SWIP Specific Plan. If a word is not defined in this Appendix or in the Municipal Code, the Director of Community Development shall determine the most appropriate definition in compliance with this Specific Plan.

- **Abutting.** Having lot lines or zone boundaries in common.
- **Accessory Building.** See Municipal Code Section 30-11 (List of Definitions). A building detached from the main building or structure on the same lot, the use of which is incidental and subordinate to the main building or structure.
- **Adjacent.** The condition of being near to, or close to, but not having a common boundary or dividing line. Properties that are separated by a public access easement, alley, public or private right-of-way, street (other than arterial highways or commuter roadways identified in the Circulation Element), or by a creek, river, stream, or other natural or artificial waterway shall be considered as adjacent to one another.
- **Adult Business.** See Municipal Code Section 30-11 (List of Definitions) and Municipal Code Chapter 15, Article XVIII (Adult-Oriented Business Regulations).
- **Alcohol Sales.**
  1. **Off-Site.** An establishment that sells, serves, or gives away alcoholic beverages for consumption off the premises and that is applying for or has obtained any ABC License for off-site consumption.
  2. **On-Site.** An establishment that sells, serves, or gives away alcoholic beverages for consumption on the premises and that is applying for or has obtained any ABC License for on-site consumption.
- **Ancillary Parking Facilities.** A place for the parking of operational and street legal motor vehicles on a temporary basis within an off-street parking area, including institutional, private, and public parking structures that accommodate temporary or transitional parking. Includes parking areas that serve uses with limited turnover during a normal working weekday (e.g., parking for mass transit systems, employee-type parking, etc.).
- **Animal Kennel Services.** An establishments in which four or more animals that are at least four months of age are kept, boarded, bred, trained, or sold.
- **Antenna.** Any system of wires, poles, rods, towers, whips, reflecting discs, or similar devices used for transmission or reception of electromagnetic waves. Includes all satellite dish antennae, as well as any and all antenna structures used for the reception of television, radio waves, and microwaves. See Municipal Code Chapter 32 (Wireless Telecommunications Towers and Antennas).

*Definitions*

- **ATM (Automated Teller Machine).** An automated device used by the public to conduct banking and financial transactions electronically (i.e., withdrawing cash from, or depositing cash or checks into, a bank, savings, credit union, credit card or similar account). Does not apply to retail point-of-sale transactions within a fully enclosed structure.
- **Auction.** See "Vehicle Auction."
- **Bar, Lounge, or Nightclub.** An establishment that sells or serves alcoholic beverages for consumption on the premises and is holding or applying for a public premise license from the California State Department of Alcoholic Beverage Control (ABC) (i.e., ABC License Type 42 [On Sale Beer & Wine-Public Premises], ABC License Type 48 [On Sale General-Public Premises], and ABC License Type 61 [On Sale Beer-Public Premises]). Persons under 21 years of age are not allowed to enter and remain on the premises. The establishment shall include any immediately adjacent area that is owned, leased, rented, or controlled by the licensee.
- **Broadcasting Office or Studio.** Commercial and public communications facilities, including radio and television broadcasting and receiving stations and studios, with facilities entirely enclosed within buildings.
- **Bulkhead.** A horizontal or inclined outside door over a stairway leading to a cellar.
- **Business Support Services.** Establishments that primarily render services rather than selling goods. Services may include copy shops, printing services, engraving, package and postal services, photo processing, janitorial services, and similar operations.
- **Caretaker Housing.** A permanent residence on the site of a nonresidential use. The residence is secondary or accessory to the principal nonresidential use of the site and houses a caretaker employed for security purposes or to provide 24-hour care or monitoring of people, plants, animals, equipment, or other conditions on the site.
- **Car Wash/Detailing.** An establishment engaged in the washing, waxing, or cleaning of automobiles or similar light-duty vehicles. Includes either of the following:
  1. **Full Service.** A car wash establishment where operating functions are performed entirely by an operator/owner with the use of washing, waxing, and drying equipment supplemented with manual detailing by the operator/owner.
  2. **Self Service or Accessory.** An establishment where washing, drying, polishing, or vacuuming of an automobile is done by the car driver or occupant.
- **Catering Service.** An establishment that prepares and delivers food and beverages for off-site consumption.
- **Commercial Use.** Activity involving the sale of goods or services carried out for profit.

- **Drive-Through Facility.** An establishment that provides goods or services accessible to persons who remain in their motor vehicles.
- **Dwelling, Single-Family Attached.** A building or portion thereof used and/or designed as one dwelling unit, located on a single lot, and constructed with one or two common walls with a single-family unit on another lot.
- **Dwelling, Single-Family Detached.** A building used for one dwelling unit, located on a single lot, and separated from any other dwelling unit.
- **Dwelling Unit, Second.** See "Second Dwelling Unit."
- **Factory/Warehouse Outlet Store.** A retail establishment in which a manufacturer sells its stock directly to the public through its own brand-name store.
- **Financial Facility.** An establishment that provides for the custody, loan, or exchange of money and for the extension of credit.
- **Flex-Tech Multi-Use Facility.** A type of development designed and intended to allow a combination of office, research and development, retail sales, and/or industrial, warehouse, and distribution uses with flexibility to shift between different uses. Flex-tech multi-use development typically provides office or sales space on the front side of a building and "flex areas" on the back side with tall interior clear ceiling heights that typically range from 16 to 26 feet. Flex areas are used for additional offices and sales space and/or research and development, warehousing, distribution, light manufacturing, and high-tech operations. A facility will house tenants in separate suites and will provide a wide variety of features (e.g., storage space of a warehouse; utilities infrastructure for call centers or data centers; superior exterior finish and environmental controls for a retail store; etc.). See Exhibit A-1 Sectional View of Two-Story Flex-Tech Multi-Use Facility.

Exhibit A-1 – Sectional View of Two-Story Flex-Tech Multi-Use Facility

*Definitions*

- **Food Service.**
  - 1. **Outdoor Dining.** An outdoor dining area contiguous and accessory to a restaurant.
  - 2. **Restaurant.** A commercial establishment where food and beverages are prepared, and may be served and consumed on or off the premises. Includes fast food restaurants, take-out restaurants, and full-service restaurants.
- **Granny Housing.** See Municipal Code Section 30-11 (List of Definitions). A dwelling unit to be constructed, or which is attached or detached from, a primary residence on a parcel zoned for a single-family residence, if the dwelling unit is intended for the sole occupancy of one adult or two adult persons who are 55 years of age or over, and the area of floor space of the attached dwelling unit does not exceed 30 percent of the existing living area or the area of the floor space of the detached dwelling unit does not exceed 1,200 square feet.
- **Handcraft Industries, Small-Scale Manufacturing.** Establishments that manufacture and/or assemble small products primarily by hand, including jewelry, pottery, and other ceramics, as well as small glass and metal art and craft products. Also includes manufacturing establishments not classified in another major manufacturing group, including: brooms and brushes; buttons, costume novelties; jewelry; musical instruments; pens, pencils, and other office and artists materials; sporting and athletic goods; toys; professional, controlling, and scientific instruments; monuments and headstones; and other miscellaneous manufacturing industries.
- **High Cube Warehousing/Distribution Center.** See "Warehousing/Distribution Center, High Cube."
- **Home Occupations.** Any accessory activity carried out for gain which is conducted within a dwelling unit incidental to the residential use of the dwelling unit and does not adversely affect the uses permitted in the district of which it is a part, and which is not a medical marijuana dispensary. No products may be sold nor signs displayed other than those permitted, no persons are employed other than occupants of the residence, and no mechanical equipment may be used other than that necessary or convenient for domestic purposes.
- **Hotel.** A building in which there are six or more guest rooms where lodging with or without meals is provided for compensation, and where no provision is made for cooking in any individual room or suite. Access to the guest facilities shall be through a main lobby so as to monitor and control the actual use of the facility by patrons.
- **Industrial Equipment, Materials, Supplies, Truck, and Truck Trailer Storage.** Any land or buildings used for the storage of equipment, vehicles, trucks, truck trailers, containers and tanks, machinery (new or used), and raw or finished building materials used by the owner or occupant of the premises in the conduct of any building trade, industrial, manufacturing, or distribution activities.

- **Industrial Repair.** A service facility where various types of electrical, electronic, and **mechanical** equipment, and appliances and machines are repaired and/or maintained away from the site of the equipment owner. Includes motor vehicle services such as heavy and light repair, part replacement, maintenance, custom repair, painting, and body work.
- **Industrial Use.** Those fields of economic activity including construction; manufacturing; transportation, communication, electric, gas, and sanitary services; and wholesale trade.
- **Logistics and Distribution Facility.** Warehouse/distribution facilities used for the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) before their distribution to retail locations or other warehouses. Warehouse/distribution centers are generally greater than 100,000 square feet in size, with a land coverage ratio of approximately 50 to 80 percent, and a dock-high loading door ratio of approximately 1:5,000 – 10,000 square feet. They are characterized by a small employment count due to a high level of automation; significant movement and storage of products, materials, or equipment; truck activities frequently outside of the peak hour of the adjacent street system; and good freeway access, including:
  - Freight Yards/Forwarding Terminals
  - High Cube Distribution Centers
  - Moving Agencies
  - Parcel Delivery Terminals
  - Railroad Freight Stations
  - Shipping/Receiving Yards
  - Truck Terminals
- **Lot Consolidation.** A legal action in which a lot line is abandoned, a lot line is adjusted, lots are merged, or other equivalent action is taken, for the purpose of allowing a structure or development to be built so that it extends over what were previously two or more separate lots.
- **Manufacturing.** Establishments that convert substances, components, or raw materials to a product through mechanical, physical, or chemical processes.
- **Light Manufacturing.** Establishments that assemble, fabricate, and convert already processed raw materials into products and whose operation may create limited impacts on surrounding land uses. Includes:
  1. **Appliance Manufacturing.** Establishments that manufacture small portable appliances, devices, or instruments used for domestic functions (e.g., vacuum cleaners, televisions, toasters, hairdryers, mixers, fans, radios, food processors, sewing machines, etc.) and large non-portable appliances used for domestic functions (e.g., washers, dryers, refrigerators, freezers, stoves, etc.).

2. **Electronics and Equipment Manufacturing.** Establishments that manufacture machinery, apparatus, and supplies for the generation, storage, transmission, transformation, and use of electrical energy. May include the assembly of manufactured parts.
  3. **Furniture and Fixture Manufacturing.** Establishments that produce wood and metal products: household furniture; bedsprings and mattresses; all types of office furniture, partitions, shelving, lockers, and store furniture; and miscellaneous drapery hardware, window blinds, and shades. Includes wood and cabinet shops and sign shops.
  4. **Glass Product Fabrication.** Establishments that make glass products from purchased glass.
  5. **Machinery Manufacturing.** Establishments that make or process raw materials into finished machines or parts for machines.
  6. **Paper Product Manufacturing.** Establishments that convert paper or paperboard without manufacturing the paper, pulp, or paperboard. Includes envelope manufacturing, converted paper products, paper coating and glazing, paper bags, assembly of paperboard boxes, wallpaper, etc.
  7. **Product Assembly and Distribution.** Establishments that assemble small products and electronic equipment from parts manufactured elsewhere. Includes computers, telephones, and automobiles; office and store machines and devices; service industry and household machines.
- **General Manufacturing.** Establishments that convert raw materials into a product and whose intensive nature and scale of operation that may have an impact on surrounding land uses. Includes:
    1. **Chemical Product Manufacturing.** Establishments that manufacture basic organic and inorganic chemical products (e.g., synthetic dyes and pigments; soaps and cleaning compounds; fertilizer materials; insecticidal, herbicidal, fungicidal and pesticidal preparations; photographic chemicals, etc.).
    2. **Concrete, Gypsum, and Plaster Product Manufacturing.** Establishments that produce bulk concrete, concrete building block, brick, and all types of pre-cast and pre-fab concrete products. Also includes the manufacture of gypsum products, including plasterboard.
    3. **Food Products Manufacturing.** Establishments that can, cure, and process raw agricultural and seafood products, and convert raw agricultural and seafood products to finished food products. Includes: meat, poultry, and seafood canning, curing, byproduct processing; fish canning and curing, meat products, sauerkraut, vinegar, yeast, rendering or refining of fats and oils, and sugar processing; and miscellaneous food items prepared from raw products.

4. **Glass Product Manufacturing.** Establishments that manufacture glass and/or glass products by melting silica sand or cullet, including the production of flat glass and other glass products that are pressed, blown, or shaped from glass produced in the same establishment.
  5. **Plastics, Synthetics, and Rubber Product Manufacturing.** Establishments that manufacture rubber products including: rubber footwear, mechanical rubber goods, heels and soles, flooring, and other rubber products from natural, synthetic, or reclaimed rubber. Also includes establishments that make products from recycled or reclaimed plastics or styrofoam; mold primary plastics for other manufacturers; manufacture miscellaneous finished plastics products, fiberglass, and fiberglass application services.
  6. **Pulp and Pulp Product Industries.** Establishments that manufacture pulp, paper, or paperboard. Includes pulp, paper, and paperboard mills.
  7. **Stone and Cut Stone Product Manufacturing.** Establishments that cut, shape, and finish marble, granite, slate, and other stone for construction and miscellaneous uses.
  8. **Structural Clay and Pottery Product Manufacturing.** Establishments that produce brick and structural clay products, including pipe, china plumbing fixtures, and vitreous china articles, fine earthenware, and porcelain products.
  9. **Textile and Leather Product Manufacturing.** Establishments that transform basic fibers (natural or synthetic) into a product, including yarn or fabric, that can be further manufactured into usable items (apparel, lace, carpets, curtains, upholstery, thread, twine, cordage, etc.) and industries that transform hides into leather by tanning or curing.
  10. **Transportation Product Assembly.** Establishments that manufacture or assemble complete equipment for transporting people and goods. Includes: passenger automobiles, trucks, commercial motor vehicles and buses, and special-purpose motor vehicles; chassis or passenger car bodies; boat building and repairing; aircraft manufacturing; motorcycles, bicycles, and parts.
- **Mini-Storage Facility.** A structure or group of structures where individual storage spaces are leased to individuals, organizations, or businesses for self-service storage of personal property, goods, and wares.
  - **Motel.** An establishment providing temporary accommodations containing six or more rooms some of which have direct access to the parking areas without the necessity of passing through the main lobby of the building.
  - **Motor Vehicle Rentals, Sales, and Leases.** Establishments that sell, rent, or lease new and used passenger automobiles, panel trucks or vans, trailers, and recreational vehicles

(RVs). Minor maintenance may be an allowed accessory use. Does not include truck sales ("Truck Sales").

- **Nightclubs, taverns, bars.** a use providing preparation and retail sale for on-site consumption of alcoholic beverages, as licensed by the Alcoholic Beverage Control, and may offer facilities for dancing or performing floor shows.
- **Offices.** A building with a group of rooms used by a business, corporate headquarters, professional, organization, service industry, or government to provide executive, management, administrative, financial services, or medical services.
- **Open Space/Park.** A designated area for passive, active, recreational, or leisure uses.
- **Outdoor Dining.** See "Food Services."
- **Outdoor Display and Sales.** The temporary or permanent outdoor display of merchandise incidental to an adjacent primary use. Does not include the sale of motor vehicles, mobile homes, boats, and recreational vehicles, or building or landscaping materials. Outdoor displays shall comply with the standards in the Fontana Municipal Code Section 30.88 et seq. (Temporary Uses) for temporary sales and displays.
- **Parking Structure.** A structure with one or more levels or floors used exclusively for the parking or storage of motor vehicles. A parking structure may be totally below grade (as in an underground parking garage) or either partially or totally above grade with those levels being either open or enclosed. See also "Ancillary Parking Facility."
- **Personal Services.** An establishment that offers specialized goods and services purchased frequently by the consumer, including:
  - Acupuncture
  - Carpet Cleaning
  - Chiropractic clinics
  - Cosmetic Procedures (e.g., laser hair removal, tattoo removal, botox injections, etc.)
  - Dry Cleaning
  - Key Making
  - Health Clubs
  - Laundromats
  - Laundry cleaning, pressing, and dyeing
  - Shoe repair
  - Steam Cleaning
  - Tailors and Seamstresses
  - Tanning Salons
  - Tattoo Services and Body Piercing
  - Studios
- **Petroleum/Hazardous Materials Storage.** Any land or buildings used for the storage of fuel, flammable liquids, or other hazardous materials and chemicals used by the owner or occupant of the premises in the conduct of any building trade, industrial, manufacturing, or distribution activities.
- **Public Assembly Facility.** A facility designed to accommodate groups of people for conventions, conferences, seminars, product displays, recreation activities, and entertainment functions, along with accessory functions including temporary outdoor displays, and food and

beverage preparation and service for on-site consumption. May include cultural facilities (e.g., libraries, museums, art galleries, etc.) and places of worship.

- **Public Facility.** A facility that provides a needed service that contributes to the general public welfare, including:
  - Cogeneration Facilities
  - Drainage Ways/Structures
  - Electric Substations
  - Equipment
  - Power Stations
  - Pumping Stations
  - Transmission Lines
  - Water Reservoirs
  - Police, Fire and Emergency Service Stations
  - Transportation and Dispatch Facility
  - Library
  - School
- **Recreational Facility.** A commercial establishment where tickets are sold or fees are collected for the sole purpose of providing the general public with an indoor and/or outdoor area for participating in amusing or entertaining activities, including:
  - Arcade
  - Batting Cage
  - BMX Facility
  - Bowling Alley
  - Bungee Jumping
  - Go-Carting
  - Miniature Golf
  - Motorized Rides (i.e., rollercoasters or ferris wheels)
  - Movie Theater
  - Paintball
  - Rock Climbing
  - Skate Park
  - Skating Rink
  - Tracks, water areas, flight areas for radio-controlled cars, trucks, planes, boats, helicopters
  - Water Rides and Slides
- **Recreation Vehicle (RV).** A moveable vehicular structure without permanent foundation, which can be towed, hauled or driven and primarily designed as temporary living accommodation for recreational, camping and travel use. Recreational vehicles include but are not limited to travel trailers, truck campers, camping trailers and self-propelled motor homes.
- **Recycling Facility.** A facility where waste and other discarded materials are sorted, cleaned, treated or reconstituted for the purpose of using the altered form. Includes scrap metal dealers, aluminum collection centers, and paper recycling centers.
- **Research and Development.** Establishments engaged in industrial or scientific research, including product testing. Includes electronic research firms or pharmaceutical research laboratories. Excludes manufacturing, except of prototypes, and medical testing and analysis.
- **Restaurant.** See "Food Services."
- **Retail Sales, General.** Any retail establishment that specializes in the on-site indoor sales of newly finished, dated, or restored goods to consumers, including:

- Appliances
  - Automotive Supply Stores
  - Bakeries (retail only)
  - Carpeting and Floor Covering
  - Clothing and Accessories
  - Convenience Stores
  - Delicatessens
  - Drug and Discount Stores
  - Electrical Supplies
  - Electronic Equipment
  - Floor Covering Stores
  - Florists and Houseplant Stores
  - Furniture Stores
  - Garden Furniture and Supply Stores
  - Glass or Mirror Stores
  - Grocery Stores
  - Hardware Stores
  - Home Furnishings
  - Jewelry Stores
  - Leather Goods
  - Locksmith Establishments
  - Luggage and Leather Goods
  - Medical Supplies and Equipment
  - Mini Warehouses
  - Motor Vehicle Parts Stores
  - Office Supplies
  - Paint and Wallpaper
  - Pharmacies
  - Plumbing Supplies
  - Sporting Goods and Equipment
  - Travel Services
- **School, Commercial.** A business, secretarial, or vocational school offering specialized trade and commercial courses. May include facilities, institutions, and conference centers that offer specialized programs in personal growth and development (e.g., arts, communications, environmental awareness, fitness, and management, etc.) and the following specialized schools:
    - Art Schools
    - Business Schools
    - Computers Schools
    - Dance Schools
    - Drama Schools
    - Driver Education Schools
    - Electronics Schools
    - Establishments Providing Courses by Mail or Internet
    - Gymnastics Training Facilities
    - Language Schools
    - Music Schools
    - Photography Schools
    - Religious Ministry Training Facilities
    - Secretarial Schools
    - Seminaries
    - Tutoring Centers
    - Vocational Schools
  - **School, Trucking.** A trade school that provides an education in the operation of a tractor-trailer, 18-wheeler, semi, big rig, or similar truck. May include classroom instruction and on-the-job training and sleeping quarters. Truck driving schools may be operated by trucking companies.
  - **Second Dwelling Unit.** An attached or a detached residential dwelling unit that provides complete independent living facilities for one or more persons. Includes permanent areas for living, sleeping, eating, cooking, and sanitation on the same parcel on which the single-family dwelling is situated.
  - **Service.** An act, or any results of useful labor, which does not in itself produce a tangible commodity.

- **Service Establishment.** An establishment whose primary activity is the provision of assistance, as opposed to products, to individuals, business, industry, government, and other enterprises.
- **Service Station.** An establishment engaged in the retail sale of gasoline, diesel, and alternative fuel, lubricants, parts, and accessories. May include incidental "minor" maintenance and repair of automobiles, light trucks, vans, or similar size vehicles.
- **Shopping Center.** A group of multi-tenant architecturally unified commercial retail establishments built on a parcel that is planned, developed, and managed as a single operating unit.
- **Sign.** Any card, cloth, plastic, paper, metal or other material or painted character visible from outside of a structure for advertising purposes, mounted to the ground or any tree, building, wall, bush, rock, fence or structure, whether privately or publicly owned. Sign means any graphic announcement, declaration, demonstration, display, illustration, insignia or object used to advertise or promote the interest of any person or business when the sign is placed out-of-doors in view of the general public. Each chapter for each land use district in this Specific Plan has a section entitled "Sign Standards" that provides definitions and illustrations of specific sign types. Related definitions are as follows:
  1. **Animation.** More than one change in a sign's message or lighting within a single 24-hour period.
  2. **Exposed Incandescent Bulb Illumination.** The illumination of a sign by incandescent bulbs that are mounted directly to the face of a sign.
  3. **Exposed Neon Tube Illumination.** The illumination of a sign by neon tubes that are mounted directly to the face of a sign.
  4. **External Illumination.** The illumination of a sign by projecting light on to the face of the sign from a light source located outside of the sign, such as "gooseneck" lamps.
  5. **Frontage.** The length of a lot along a street or other principal public thoroughfare, but not including such length along an alley, railroad or freeway.
  6. **Halo Illumination.** The illumination of a sign by projecting light behind an opaque letter or emblem that results in the appearance of a ring of light around the unilluminated letter or emblem.
  7. **Internal Illumination.** The illumination of a sign by projecting light on a translucent panel from a light source located inside of an enclosed sign cabinet.
  8. **Linear Frontage Ratio.** The ratio of sign area to linear foot of building frontage. The Linear Frontage Ratio is one and one-half (1.5) square feet of total sign area is allowed for each linear foot of building frontage ("Building Frontage").

9. **Transom.** A crosspiece that separates a door from a window or fanlight (known as transom window or transom light) above it.
- **Sign Area.** The entire area within a single continuous perimeter composed of squares or rectangles that enclose the extreme limits of writing, representation, emblem, or any figure of similar character, with any frame, background area of sign, structural trim, or other material or color forming an integral part of the display or used to differentiate such signs from the background against which it is placed. If a sign is designed with more than one exterior surface, the area shall be computed as including only the maximum single display surface that is visible from any ground position at one time. The supports or uprights on which any such sign is supported shall not be included in determining the sign area unless such supports or uprights are designed in such a manner as to form an integral background of the display.
  - **Specialty/Antique Automotive Sales.** An establishment that sells rare cars, exotic cars, collector cars, muscle cars, antique cars, vintage cars, classic cars, or similar specialty cars. May also include a vehicle restoration facility intended to restore a car to its original condition.
  - **Street Frontage.** The lineal length of that portion of a lot abutting a street.
  - **Temporary Uses.** A use established for a fixed period of time with the intent to discontinue the use upon the expiration of the time period. See Division 14 (Temporary Use) in Municipal Code Chapter 30 (Zoning and Development Code).
  - **Truck.** Any heavy duty vehicle exceeding a gross vehicle weight rating of 18,500 pounds or any truck-tractor or semi-trailer.
 

**Trailer.** A trailer used in conjunction with a truck-tractor and designed so that a considerable part of its own weight or that of its load rests upon and is carried or drawn by the truck tractor.

**Truck-Tractor.** A motor vehicle designed and used primarily for drawing other vehicles and not constructed to carry a load other than a part of the weight of the vehicle and load drawn.
  - **Truck Sales, Rentals, and/or Leasing.** Establishments that sell, rent, or lease new and used heavy-duty trucks. Minor maintenance is an allowed accessory use. Does not include car, van, and recreational vehicle (RV) sales ("Motor Vehicle Rentals, Sales, and Leases").
  - **Truck Stop.** A facility located in close proximity to a freeway or other limited access highway that provides specialized services to the trucking industry, which may include fueling stations, restrooms, parking areas, convenience stores, showers, internet services, maintenance facilities, vehicle wash services, and on-site or adjacent motels.
  - **Truck/Trailer Storage.** The short-term or long-term parking or storage, outside an enclosed building, of trucks and truck trailers that are in usable condition and that are not specifically displayed as merchandise or offered for sale. A caretaker unit is required.

- **Truck Uses.** Oversize vehicles, including recreational vehicles, commercial vehicles exceeding a manufacturer's gross vehicle weight rating of 10,000 pounds, and tractor trailer trucks. See Section 13.6.D. Oversize Vehicle Parking.
- **Vehicle Auction.** A place where automobiles and/or recreational vehicles are offered for wholesale to persons/businesses bidding on the automobiles or recreational vehicles in competition with each other. In conjunction with the auction facility, ancillary uses may include: eating establishments, Department of Motor Vehicles (DMV) services, financing services, vehicle repair, painting, detailing and off-site storage for vehicles waiting to be auctioned at the facility.
- **Warehousing Facility.** The use of a building primarily for the storage of goods of any type, excluding bulk storage of materials which are flammable or explosive or which create hazardous or commonly recognized offensive conditions.
- **Warehousing/Distribution Center, High Cube.** A warehouse/distribution center greater than 200,000 square feet in size with a typical ceiling height of at least 28 feet, employing a high level of automation, and used primarily for distribution to other warehouses. A warehousing use engaged primarily in receipt and distribution of goods, products, supplies etc., with incidental storage and typically identified with a quick turnaround of goods. Excludes bulk storage of materials, which are flammable or explosive or create hazardous or commonly recognized offensive conditions.
- **Warehousing Retail.** A use primarily engaged in the selling of any type of goods directly to the ultimate consumer. Includes incidental wholesaling and storage of goods, but excludes bulk storage of materials which are flammable or explosive or which create hazardous or commonly recognized offensive conditions.
- **Warehousing, Wholesale.** Establishments or places of business primarily engaged in selling merchandise to other businesses, including retailers, industrial, commercial, institutional, or professional business users, other wholesalers, or acting as agents or brokers and buying merchandise for, or selling merchandise to, such individuals or companies.
